In the fiscal year ended March, 1922, the United States ranked sixth among the sources of imports into Siam. Twenty-five per cent of the country's total imports for that period came from Hongkong, 17 from the United Kingdom, 17 from Singapore, 10 from China, 8 from India, and 5 per cent from the United States. These figures clearly reveal Great Britain's predominant interest in Siamese trade. In estimating the relative extent of foreign influence, which is an important factor in this Asiatic Kingdom, it may be said that the British lead in commercial and financial matters, Danish influence is directed to military lines, and the Chinese and Indians (who form a large part of the population) enter largely into internal politics. No foreigners, however, are held in greater esteem by the Siamese themselves, and by the large merchant class of Chinese, than Americans, and the potentialities of Americans influence in the country are great. The treaty of Siam with the United States, proclaimed in 1921, is pointed to with pride by the people of the country. Important foreign advisory positions in the Government are held by Americans, and the attitude of Siamese officials toward the United States is clearly indicative of a desire for American interest in trade with the country.

Despite this great asset, however, certain factors more or less peculiar to the country have militated against the proper development of trade with the United States. Siam has not formed such a source of essential raw materials as other Asiatic districts have proven to be; the country has been isolated from American thought by lack of adequate communications; exchange rates, banking, and credit conditions have favored other nationals, and distributing facilities for American goods have been meager. Examination of the country's foreign trade would seem to indicate that the elimination of these difficulties through energetic American endeavor would amply reward the effort.

The items comprising the bulk of Siam's import trade represent those that the United States exports to the Far East, and that country is developing in no small way as a market for manufactured articles of nearly every description, notably machinery, textiles, chemicals, paper, mineral oils, metal manufactures, cigarettes, and motor cars. In the fiscal year 1921–22 imports from the United States compared favorably with those from other countries in such important lines as agricultural implements, automobiles and parts, electrical equipment, railway material, and petroleum products, despite existing handicaps to the introduction of American products. Siam produces tremendous quantities of rice of the first quality and various hardwoods, and these exports were sufficient for many years to net the country a large credit balance of trade, which was only reversed in 1920–21, when an embargo on the exportation of rice prevailed. The country is also capable of becoming an important producer of sugar, tin, rubber, and many useful tropical products, independent of European control.

It would appear that American opportunity in the Far East has been so extensive that our sales effort in this small and relatively inaccessible Kingdom has been more casual than the economic facts justify. Certainly Siam should not be ignored in any survey of American markets in the Far East.

SUCCESSFUL CONNECTIONS SECURED THROUGH SALES-INFORMATION SERVICE.

The Commercial Intelligence Division of the Bureau of Foreign and Domestic Commerce has received the following letter from a large manufacturer and exporter of office equipment:

We can not refrain from thanking you for the splendid cooperation which you have so cheerfully given us and which has been instrumental in developing our foreign trade.

It may interest you to know that a few days ago we closed a contract with a firm in Australia. Furthermore, upon your suggestion, we approached a company in China, and our negotiations with these people came to a successful conclusion a week or so ago.

While the initial orders from these concerns amounted to several thousand dollars, it is most gratifying to know that we have made connections with the right people, as we are much more interested in future developments than in initial stock orders.

Your good organization should be commended for its constructive and helpful work, and you may rest assured that this company is one fully appreciative of the wonderful services rendered by you.

MONTHLY CABLE REVIEWS

LATIN AMERICA.

J. R. McKee, Acting Chief, Latin American Division.

ARGENTINE MARKET INACTIVE.

Based on cable from Commercial Attaché Edward F. Feely, Buenos Aires, May 26.

The Argentine import and retail trade is still dull and stocks are low. An increase in import tariff valuations has been proposed. Meat legislation is awaiting Executive sanction. Great interest is manifest in proposed Government petroleum refinery.

Depression in Import and Retail Trade.

The depression in the import and retail trade still prevails. Stocks, although not large, are generally well proportioned to the demand. Importers report an active demand for agricultural implements, owing to the generally favorable outlook for agriculture. The weather has been good, and it is unofficially estimated that wheat and linseed acreage for the next crop will exceed this year's area by 10 per cent. Other active import lines are American automobiles and small tractors, as well as drugs, which are coming chiefly from Germany and France on account of low prices. Germany has also been placing a quantity of cheap hardware on the market. There is little movement in the market for industrial chemicals, which continues stocked; and the cotton-yarn market generally is quiet, with little change except for a drop in American prices. European prices for paper are ruling 25 per cent below American figures.

Increased Import Tariff Proposed.

The Executive has submitted to Congress a proposal for an increase of 50 per cent in present import-tariff valuations and recommends exemption from import duties for lumber and certain other construction materials and industrial machinery. General building and construction is about normal. Immigration is increasing.

Exports Show Increase.

Exports have been considerably heavier than last year and stocks are generally low. The price of grain has been firm, with a slight advance in linseed. Meat prices have been steady. The charter market remained about the same as last month. Exports from January 1 to May 24, 1923, compared with those of the same period of last year, respectively, were: Wheat, 2,132,000 and 2,099,000 tons; corn, 687,000 and 686,000 tons; linseed, 759,000 and 321,000 tons; oats, 275,000 and 182,000 tons; quebracho extract, 71,000 and 51,000 tons; ox hides, 2,820,000 and 2,400,000 skins; calfskins, 440,000 and 261,000 skins; sheepskins, 19,000 and 31,000 bales; wool, 187,000 and 239,000 bales; chilled and frozen beef for four months (not including May), 2,138,000 and 1,650,000 quarters; frozen sheep, 1,416,000 and 1,179,000 carcasses.

Meat Control and Establishment of Petroleum Refinery Proposed.

The packers control act and the municipal packing house bill have passed the Chamber of Deputies and will probably pass the Senate. Considerable interest has also been manifested in the proposed Government petroleum refinery at La Plata, the estimated cost of which is 8,000,000 paper pesos.

Negotiations for Renewal of Loan—Finances.

The Government is negotiating for the renewal of the $50,000,000 American loan, which is due October 1, and authorization of the eighteenth series of cedulas has been requested. The 1923 budget and loan program for the Province of Buenos Aires have passed the provincial senate and are awaiting executive approval.

There has been an increase in Government revenues and railway revenue. Bank loans and both checking and savings deposits are increasing. Minor commercial failures are occurring.

Exchange has declined somewhat, the rate on New York averaging $1.21, as compared with $1.19 for last month.

But little foreign investment capital is coming into the country and investments of local capital are also small.

GENERAL BUSINESS IMPROVEMENT IN CHILE.

Cable from Assistant Trade Commissioner W. E. Embry, Santiago, May 24.

Announcement of nitrate prices for the new year is accompanied by a general business improvement in Chile. Large sales of nitrate are reported. April imports increased while exports declined. The Government has approved the construction of a new port at Lebu.

Announcement of Nitrate Prices Causes Large Sales.

The outstanding factor in the economic developments of the past month in Chile was the announcement made on May 4 by the Nitrate Producers' Association that prices for the new year, commencing July 1, would be approximately on the same basis as those prevailing during the current year. Following this announcement, large sales of nitrate were reported, principally for forward delivery in July and August. The first day following the announcement 127,000 metric tons were sold, largely for July delivery, at 19s. 3d. Heavy sales continued, amounting to approximately 350,000 tons to date. The number of nitrate plants operating at the present time has increased to 62. The heavy sales have brought about a general optimistic feeling in business circles and this feeling has already been translated into better business conditions.

Improvement in Stock Market—Exchange Firmer.

As part of the favorable reaction to the better nitrate market there has been a general increase in the price of nitrate shares, accompanied by smaller increases in bank, shipping, insurance, and sundry other shares.

Chilean exchange is slightly firmer than for April, the average for the first 23 days of May being 12⅞ cents, compared with 12⅞ cents for April. Following

immediately upon the first nitrate sales, local exchange became stronger, and since May 5 the peso has remained firm at about $0.131 or 7.7 pesos to the dollar.

Settlement of Coal Strike.

Another improvement in the situation was brought about by the settlement during the month of the strike in the southern coal fields, which has been in progress intermittently for a long period. The agreement of the railroads to take considerable quantities of the native product rendered the situation easier of adjustment.

April Exports Show Decline from March Figures.

April exports of nitrate amounted to 149,000 metric tons, of which 63,000 tons went to the United States. The total March exports of this commodity were 253,000 tons, of which 110,000 tons were shipped to the United States. Exports for the first half of May amounted to 25,000 metric tons, of which only 3,251 tons were taken by the United States. The small shipments made during the later period are to be explained by the fact that sales during April were very small, buyers being inclined to hold off pending the announcement of the schedule of prices for the new year.

Total Chilean exports for April were considerably reduced by the smallness of nitrate shipments, although there were increases in most of the other commodities, especially bar copper, exports of which amounted in April to 15,000,000 pesos, as compared with 8,000,000 pesos for March.

Increase in Imports—Stocks on Hand Normal.

Total imports for April showed a considerable increase over those of the previous month, particular items that stand out in this connection being edible oils, rice, automobiles, coal, calcium carbide, dynamite, pig iron, iron bars, paraffin wax, petroleum, and sacks. Good activity is also reported in industrial machinery.

Stocks of goods on hand were generally normal during the last half of May, with prices on imported staples ruling about the same as last month and with export prices lower on barley flour, wheat, and peas.

Shipping and Port Construction.

The demand for shipping space has been dull during the past two weeks and a decline in rates has resulted—the rate to Great Britain being about 25s. per ton. However, this slump is regarded as temporary, and rates are expected to go higher later in the year when the nitrate now being sold is moved. Even at the present time a rate of 36s. 6d. is being quoted for January and February, 1924, to cover the nitrate movement. Increased compensation is noted in the outbound freight market, due to the reappearance of German tonnage in considerable quantity.

The Chilean Government has approved the construction of a modern port at Lebu, the work not to entail a cost greater than £930,000. Requests for bids will be published in New York, according to the announcement.

Reduced Railway Rates on Minerals—Customs Collections.

The State railroads of Chile are granting a general reduction in freight rates on minerals.

Customs collections for April amounted to 12,000,000 gold pesos, which is less by 3,000,000 than the March collections. The March figure, however, was the largest for any month since February, 1920.

The Minister of Finance recently appeared again before Congress urging the early passage of the national budget.

DOMESTIC BUSINESS IMPROVING IN BRAZIL.

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, May 24.

Manufactories in Brazil are doing good business and crop conditions are promising. Import trade continues weak, with the exception of the automobile market, which is active. There is little demand for cement, machinery, or iron and steel. Stocks of coal are small. The coffee market is quiet.

Exchange Unsteady—Customs Receipts Decrease.

During the month ended May 24 the sight rate for the dollar ranged from 9.251 to 9.800 milreis. The average sight rate for the month was 9.604 milreis to the dollar, as compared with 9.443 for the previous month. The steady decline in the exchange rate is largely due to the decreasing amount of export bills and to uncertainty as to the results to be expected from making the Banco do Brazil a bank of issue. Little change in the rate is likely to take place before late in July.

The customs receipts at Rio de Janeiro amounted to 4,385,000 milreis during the period May 1 to May 20, as compared to 6,478,000 milreis during the corresponding period in April. Receipts were 3.490,000 milreis at Santos and 4,057,000 milreis in the Federal District, being decreases of 2.337,000 and 3,955,000 milreis, respectively, from the receipts collected during the three-week period ended April 20.

Commodity Stocks and Exports.

On May 22 stocks of coffee in Santos amounted to 1,369,464 bags and in Rio de Janeiro to 858,640 bags, being, respectively, 250,331 and 104,136 bags less than the stocks on hand on April 27. Between May 1 and May 22 shipsments from Santos totaled 306,708 bags and from Rio de Janeiro 104,274 bags. The market is quiet and likely to go lower. On May 22 type 4 coffee was quoted at 23.40 milreis, and type 7 at 21.244 milreis per 10 kilos, the latter being a decrease of 1.632 milreis from the price of April 24.

The sugar market is steady with first grade quoted in Pernambuco at 1.10 milreis per kilo. Entries into Pernambuco since the beginning of the crop have amounted to 2,689,000 bags. On May 22 stocks on hand were 118,000 bags in Pernambuco, 100,357 bags in Rio de Janeiro, and 105,863 bags in Sao Paulo. This is a decrease of 155,252 bags from the stocks on hand in these three cities on April 24.

Stocks of cotton in Pernambuco, Rio de Janeiro, and Sao Paulo on May 22 were, respectively, 640,000 kilos, 2,261,520 kilos, and 2,577,575 kilos. Since the beginning of the crop entries into Pernambuco have totaled 12,104,000 kilos. The market for all grades was firm, although the Sao Paulo market is weakening. The price of first grade in Pernambuco was 4.800 milreis per kilo.

Exports of cacao from Bahia amounted to 22,449 metric tons during the period from January 1 to May 9.

On May 12 rubber was quoted in Para at 4.400 milreis per kilo.

Exports of Meat, Nuts, and Fruit.

Total shipments of meat from Rio de Janeiro and Santos during the period January 1 to May 12 amounted to 15,229 tons. The live-stock industry is improving, except in Rio Grande do Sul, and increased exports of meat are promised in August.

There is great activity in the babassu market in the northern States of Maranhao and Piauhy. Exports of

babassu nuts from Maranhao during the first four months of 1923 amounted to 8,500 tons, as compared with 2,000 tons during the corresponding period of 1922.

Considerable quantities of bananas are being shipped to Argentina, exports from Santos for the first three months of this year being valued at 2,043,000 milreis, as against 617,000 milreis for the same period of 1922. Oranges are also being exported to the River Plate countries in good quantities. An American firm is being formed to export Brazilian fruit to the United States and to import American fruit into Brazil.

Import Market Affected by Decline in Exchange.

The import market suffers more and more from the further decline in exchange, and there is small prospect of any early improvement.

There has been no material change in the iron and steel market, except for a marked drop in Belgian prices. Prices have been quoted on a small quantity of German iron and steel, but few orders are being placed at the present time. The demand for cement is small with imports coming principally from Belgium and Germany. German cement is selling at 8s. 7d. per barrel.

The Belgian position is strong in the hardware market, but little business is being done and stocks continue low.

The demand for electrical goods is very weak, with Germany getting the largest share of the business. The auction of $1,000,000 worth of goods damaged in the fire which destroyed the Rio de Janeiro warehouse of a large American company will affect the market.

The machinery market is weak. Competition is not very keen as there are few orders to be obtained.

The automobile market continues active, mainly for medium-priced cars. The price of one American car in this class has been cut to 12.000 milreis, while the price of two others has been advanced to 13.500 milreis. Imports at Rio de Janeiro and Santos during the period from May 1 to May 24 amounted to 88 American cars and 8 cars from other countries. The market for American tires has suffered from the reduction in the price of a French make.

There is no improvement in the demand for paper. The price of German paper has been cut and American paper is unable to compete effectively.

The market for drugs and chemicals shows no appreciable change. Caustic soda is selling at 1.050 milreis per kilo.

The demand for foreign textiles is small and there are no outstanding developments in this field.

The market for agricultural implements is weak, due to the refusal of the farmers to buy at the present rate of exchange. The usual period of greatest activity in this line is from May to October. Business has improved but slightly in the last month and dealers are hoping, apparently without much confidence, that exchange will not prohibit a satisfactory season.

Stocks of coal are very low with imports during the last month amounting to 5,630 tons. The Central of Brazil Railroad has actually experienced a lack of fuel.

Building and Construction—Excellent Crops Predicted.

There is little activity in these building and construction lines except in Sao Paulo. Construction operations in Rio de Janeiro have shown a marked slump during the last few months, except in the erection of small buildings. In Sao Paulo, however, building continues active, with offices, warehouses, and factory buildings being put up in considerable numbers. Work has been suspended on two of the five irrigation dams being built by an American company in northeastern Brazil.

The Government Meteorological Bureau reports most of the new crops to be in excellent condition. This applies especially to cotton, rice, cacao, and coffee. The survey of the Brazilian Minister of Agriculture, Industry and Commerce estimates the 1923–24 sugar crop at 10,673,500 bags. Santos' share of the 1923–24 coffee crop is variously estimated at from 12,000,000 to 18,000,000 bags.

Brazilian Industries Doing Excellent Business.

Nearly all domestic factories continue to do an excellent business. This is particularly true of the textile and paper mills. A new paper mill is being built for a Brazilian company, and other new industrial development is planned.

Railway Activities.

The President declared in his message that the Government plans to build only such railroad lines as are urgently necessary, but it does not intend to stifle the growth of any district for lack of transportation. Most of the Government lines show a heavy deficit for 1922, though the Sao Paulo Railway's profit for last year was £547,526.

The Belgian bids were low on 10 locomotives for the Sorocabana Railway and also on rails for the Sul Mineira Line. Swedish bids were low on 10 locomotives for the Central of Brazil Railroad, and Belgian prices were low on cars.

TRADE IN MEXICO SLACKENS.

Based on cable from Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, May 25.

General business conditions in Mexico were less favorable during May than April. There is an apparent tendency to withhold orders and postpone payments. National railroads have reduced freight rates to stimulate local industries. The suspended Tampico bank resumed payments.

General business conditions covering practically all lines in the central portion of the Republic of Mexico were poorer during May than in April. There was an apparent tendency to withhold, temporarily at least, important orders for imported and domestic merchandise, and also to postpone payments on large accounts due. Collections were slower than in previous months and bank clearings were considerably less than during April.

Railroad Freight Rates Reduced.

In order to encourage local industries, the National Railroads made substantial reductions in freight rates on a number of articles when of domestic origin. Included in the list were beer, mineral waters, soft drinks, soap, starch, and high-grade lumber. An attempt to assist mining operations was manifested by the lowering of freight charges on shipments of dynamite, and coffee importers were benefited by reduced rates on their shipments destined for export.

Tampico Bank Resumes Payment.

The Petroleum Banking & Trust Co. of Tampico, which closed its doors about a year ago, has resumed payments, making the first payment of 50 per cent to all depositors.

Discount rates against silver currency dropped from the hight level of 3 per cent in April to from 2 to 2¼

per cent in May. Exchange rates for the Mexican peso remained firm and ranged from $0.48½ to $0.48 $\frac{5}{16}$, closing on May 25 at $0.48½.

Petroleum Production—Coffee and Banana Exports.

April petroleum production is reported as 11,605,000 barrels. The department of industry, commerce, and labor reports an increase in coffee exports for the first two months of 1923 over the same period of the previous year. Increased interest has been manifested in the cultivation of bananas in the region of the Isthmus of Tehuantepec. Large shipments of this fruit have been passing through the ports of Vera Cruz and Salina Cruz.

[Official Government figures give the total imports of all cotton cloths into the country for the first six months of 1922 as a little over 15,000,000 square meters, with a value of $3,891,825. These shipments were made prior to the increase in Mexican import duties on cotton piece goods, effective during July, 1922.]

PERUVIAN TRADE SLIGHTLY DULLER.

Acting Commercial Attaché W. E. Dunn, Lima, May 25.

In general, Peruvian trade is slightly duller, although imports have increased. Trade with Germany is being affected by the Ruhr occupation. The terms of sanitation loan have been modified. Exchange is steady. Arrangements for the financing of the Dunsmuir concession are not yet completed.

May Imports Show Increase.

Although the total trade of the month appears to be somewhat duller than that of last month, May imports through the port of Callao are estimated to be 50 per cent greater than those in April. The import increases are due in great measure to the desire of merchants to stock up on goods upon which duties will be increased under the new tariff law.

Business Improvement Awaits Cotton Sales.

Improvement in general business is expected as soon as sales of the present cotton crop become active in June and July. Tanguis and Mitiffi varieties are now being ginned, but little activity has yet been displayed on this market. The stock of sugar has become so low that the Government has taken active steps toward regulating the local price. The wool market is active and prices are steady.

Cancellation of Contracts for Steel Products.

An interesting development of the month is the cancellation of several important contracts for steel products, due to the inability of German firms to make deliveries on account of the situation in the Ruhr.

Sanitation Loan Modified.

The sanitation loan, which has been under discussion for a number of months and which was reported upon in last month's cable, has been slightly modified. According to the present arrangement, the first installment will be for 400,000 Peruvian pounds. The loan was floated through a local syndicate headed by the Banco Italiano. An 8 per cent bond issue, sold at 95 net and payable in 10 years, is provided for. The improvements to be undertaken in pursuance of this contract will be executed by a New York company and will include, besides those previously mentioned, a new road from Callao to Lima.

Railway Concession Granted—Tariff and Exchange.

The concession granted to the Huallaga Co. has been revised. This concession provides for the construction of the Moyabamba Railroad, work on which is expected to begin as soon as the next Congress ratifies the revised concession.

So far as is known in Lima, efforts to finance the Dunsmuir concession have not met with success in the United States or Canada, and Robert Dunsmuir is now in England. Nothing definite has been reported concerning the progress of his undertaking there.

Fifty colonists have proceeded from here to the Tomenotti concession on the Pachitea River in eastern Peru. Considerable dissatisfaction has been manifested on account of the isolated section selected for a site for this colonization scheme.

The new tariff law is still in the hands of the printer, and as yet the Government has not set the date when the law will become effective.

Local exchange has remained steady, averaging during the first 25 days of May $4.21 per Peruvian pound, as compared with an average of $4.22, reported in the monthly cable for April.

Peruvian Imports from Principal Countries.

The number of cases of goods imported into Peru through the port of Callao during the periods from March 22 to April 24 and from April 25 to May 24, respectively, were as follows: From the United States, 39,644 and 35,250; Great Britain, 13,055 and 8,347; Germany, 10,656 and 12,728; France, 2,188 and 944; and Belgium, 866 and 1,486. Italy also furnished 2,495 cases during the latter period.

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

CONDITIONS IN INDO-CHINA.

Cable from Consul Leland L. Smith, Saigon.

Indo-China rice to supply China's demand. Interest rates continue high. Increased activities in production of rubber, tin, zinc, and coal.

According to present indications, the Chinese traders of Indo-China will handle most of the export trade this year on account of an increased demand for rice from China. It is anticipated that European houses are facing a year of comparative inactivity and many European retailers are pessimistic over the outlook. It is feared that a number of small houses may succumb.

The exchange rate on Paris in April was steady around 8 piasters to the franc; on New York it advanced to $0.56. Interest rates continued high on account of a shortage in the rice crop and the low value of the franc. Investments in Cochin China have been hindered because of the low franc, but considerable activity is evidenced in Tonkin.

Rubber plantations of the colony are reviving activities because of the increased price of rubber. Large plantations have been taken over by an important French company. There has been renewed mining activity, especially of zinc, and tin production is expected to increase. It is estimated that the output of coal will exceed the record year of 1922.

Public works are at a standstill pending the arrival of the new governor general, but commercial construction is active on account of low-priced French struc-

tural steel and hardware and the low franc exchange. It is reported that 8,000,000 francs are to be expended in making Camfa Bay a coal-loading harbor. Government ships have already completed surveying.

Frenchmen are arranging to establish commercial air lines in Indo-China.

CONDITIONS IN STRAITS SETTLEMENTS SHOW IMPROVEMENT.

Consul General Ernest L. Harris, Singapore.

A credit balance of trade and favorable market conditions for rubber and tin characterized the month of April in the Straits Settlements. These factors support the optimism previously reported to be in evidence in this district.

Money is more plentiful and collections are improving in Singapore, but dealers are still restricting purchases to immediate requirements. Prices of merchandise stocks and share values are slightly lower. Producing costs of tin miners and rubber planters have been appreciably reduced and the mines are working at good profits. A large retailing company has announced net profits for 1922 of 218,000 Straits dollars, or 85,000 dollars less than the previous year. This company characterizes the present outlook as good. A liquidator has been appointed to wind up the affairs of an important British copra dealer.

Excess of Exports in April.

The trade of the Straits Settlements for April resulted in a fovarble balance of 8,353,000 Straits dollars, imports amounting to 54,473,000 dollars, and exports to 62,826,000 dollars. These figures show an increase in imports over March of 8,418,000 dollars, and a slight increase in exports of 821,000 dollars.

Rubber shipments in April amounted to 24,000 long tons, including foreign imports of 5,000 tons. Of these exports 80 per cent went to the United States. The rubber market remained quiet throughout the month, particularly for spot delivery. Considerable forward business was transacted for July and October. Permission has been granted for the export of an additional 5 per cent of standard production during May, June, and July. This has tended to decrease Chinese speculation.

Exports of refined tin in April amounted to 4,500 long tons, of which the United States took 68 per cent.

Imports of American cigarettes reappeared on the Singapore market in April, underselling the same quality of English brands.

Tenders to be Called for Post Office.

Government specifications are complete for the new post-office building to be erected in Singapore, and tenders are to be called in the near future.

Tests of Lumber Preservatives by Malay States.

It is announced that the forestry department of the Federated Malay States government is to conduct a comprehensive series of tests of lumber preservatives. Interested manufacturers are referred to the Forest Research Officer at Kuala Lumpur.

Shipping Activities—Exchange Rates.

Cargo space during April was ample, principally British, and stocks of bunker coal and oil normal. The Peninsular and Oriental has reduced passenger rates from Singapore to London and Marseille by approximately 10 per cent and interport passenger rates in proportion.

The exchange value of the Straits dollar on New York ranged in April from \$0.55¾ to low \$0.54½, with upward tendency. Interest rates for bank loans ranged from 5½ to 7 per cent against produce awaiting shipment, and from 6 to 7 per cent on other loans. With easier money conditions, banks are buying export bills more freely.

Conditions in Penang District.

The financial situation in Penang shows slight improvement, reports Consul Renwick S. McNiece from Penang. Merchants are buying cautiously and in reduced quantities. Some activity continues in tin and rubber shares although on a lower level than at the beginning of the year. The municipality of Penang is borrowing 2,500,000 Straits dollars from the colonial government to be used partly for new waterworks. General building and construction is reported fairly active.

Government Holdings of Tin Released.

The stocks of tin which have been held since 1921 by the British and Dutch Governments under the Bandoeng agreement were released under a new compact effective April 1, whereby 5 per cent, or 880 tons, of the tin holdings are to be made available for sale on the first of each month. Public announcement is to be made in case of any variation of this arrangement.

Market Conditions Good.

Buying of cotton piece goods was more active during April, reducing stocks of drills. Demand for hardware was good at increased prices. Wire nails and corrugated iron were also in good demand, and buying of paints improved.

LARGE RICE EXPORT FROM SIAM.

Cable from Consul Maurice P. Dunlap, Bangkok.

A record export of rice from Siam was experienced in March. The rice season is reported good and the general outlook favorable.

Rice exports in March were valued at 16,000,000 ticals, a record amount. Shipments from December to March, inclusive, totaled 565,000 tons, against 401,000 tons during the same months a year previous. The available surplus for export for 1923 is estimated at 1,400,000 tons, and present progress supports this prediction. The outlook would be more optimistic but for the effect of the official reduction of the value of the tical in January, which is now being felt. Several trading companies are in financial difficulties or liquidating.

Of the March exports of rice 55 per cent, or 164,000 tons, was shipped to Hongkong and China, 30 per cent to British Malaya, 8 to Europe, 5 to Japan, and 2 to Netherlands India.

Coal Production in Siam.

The first production of coal of any importance has commenced in Siam with the mining of a very small quantity of lignite.

Building and construction activity is small, which is normal for this country. Demand for shipping space is good.

The automobile-accessories market is reported saturated. It is stated that most hardware in Bangkok is of German make. American nails are competing with Belgian.

There were an increased number of American salemen in this district in April.

QUERIES OF GENERAL INTEREST.

Briefly answered by the Bureau.

Q. Is it possible to obtain the release of American-owned goods now held in the occupied territory in Germany?

A. If these goods were ordered and at least partially paid for before February 25, it is possible to obtain them under export license from the occupying authorities. The American firm should appoint a European agent, who will file an application for an export license with the Rhineland High Commission at Coblenz. This application should state the facts in the case and must be certified by American diplomatic representatives in Paris or Brussels. The agent can then obtain the release of the goods upon payment of the usual export tax. Merchants making new contracts must assume all risks.

Q. Is it advisable for American firms to write direct to foreign representatives of the Bureau.

A. You save time by writing directly to the Bureau of Foreign and Domestic Commerce at Washington. All or most of the information desired may be available in this country; if not, your request will be forwarded for prompt attention to the proper foreign post.

Q. A document received from Germany, and which should have been sworn to before a notary public, has been returned with a notary's seal and what appears to be an acknowledgment or affirmation. Can this be regarded as a document that has been duly sworn to?

A. German notaries are not authorized to administer oaths. This is a prerogative of courts. However, the German law has a form of affirmation before a notary which is equivalent to an oath. A false statement made under oath administered by the courts is a perjury punishable by hard labor. Similar false statements made under an affirmation that is equivalent to an oath before a notary public are punishable by imprisonment and are a criminal offense of lesser gravity.

Q. Is it possible to sell machines in Mexico on a conditional sales plan, the purchaser paying in installments and the property right remaining in the seller until the machine is fully paid for, while on default of payment the seller may regain possession of the machine sold?

A. It is permissible, under the laws of Mexico, to sell goods under a contract of conditional sale. The instrument of sale, however, must be very carefully drawn in order to avoid the possibility of a resale by the purchaser to a third person acquiring in good faith.

Q. What is likin and what is its effect?

A. Likin is an interior barrier tax levied by military provincial governors in China, generally without the consent of the Central Government, the proceeds of which are used for local administrative expense. It tends to increase the price of imported goods when sold in the interior and of domestic merchandise when brought to the port for shipment abroad.

Q. Are the import and export statistics of foreign countries reliable?

A. Yes; if their method of computation is understood. Some countries compute the value of imports and exports at current market prices, others set an arbitrary value based on prices of preceding year or average prices over several years. In general, the figures of foreign trade by volume are more reliable than those by value.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

STUDYING FOREIGN MERCHANDISING METHODS.

Do you know of an automotive exporter to whom improved merchandising methods are not one of the most pressing problems? Car exporters are developing foreign markets through a closely knit dealer and subdealer organization. To secure agents with knowledge of "transportation engineering" who are concentrating on the industrial and commercial field is the truck exporter's goal. Motor-boat manufacturers are considering the advisability of giving their line to active car dealers experienced in educational, promotion, and active sales work. Accessory and equipment manufacturers are not limiting their "ask 'em to buy" to the domestic field but are eagerly absorbing merchandising information on foreign markets. The Automotive Division is keeping up with the requirements of the industry. Two merchandising experts will make special studies of every market for the benefit of American automotive exporters, thus contributing toward a solution of the merchandising problem in foreign countries.

AUTOMOTIVE TRADE LEADS GENERAL IMPROVEMENT IN SOUTH AFRICA.

Trade Commissioner P. J. Stevenson, Johannesburg, April 11.

With large crops in sight, with wool and produce bringing good prices, with the mining industry in a strong position, with local industries securing a fair amount of business and general trade improving, the prospects for South African automotive trade in 1923 are much better than they were in 1922. Such unfavorable factors as low production in the diamond mines, dullness in the coal industry, and the fact that the wheat crop will not be a big one are more than offset by a widespread general improvement.

Car importations during 1923 will be not less than 6,000, and more optimistic observers give 6,500 as not an excessive estimate. This is based on the tendency toward larger orders indicated by the imports of the last quarter of 1922, numbering 1,545 out of the total 4,840 for the year. Sales covered not only the year's total importation but also about 275 cars from stocks in bond—about 5,000 in all—as compared with 3,700 in 1921 and 7,800 in 1920; and the sales were easier and of better quality. The country districts bought more freely, and the credit business was not at the high percentage of 1921.

Lowered Prices Continue On 1923 Imports.

A prime factor in stabilizing the local market was the lower cost of motoring, both as to original cost of car and as to operating expense, particularly in tires and fuel. The average value per car dropped to £191 from the £303 in 1921 and the £292 in 1920, yet the total value of the trade (£926,512) was exceeded only in 1919 and 1920.

This lowering of unit value has continued into 1923, as shown by the January imports, which totaled 494 cars and trucks valued at £85,609 (a unit value of

£173), as against December imports numbering 538 valued at £107,205, and imports in January, 1922, of 330 valued at £66,115.

Canada furnished 250 of these 1923 importations at a value of £34,964; the United States 233, valued at £40,800; Great Britain 6, valued at £6,718; France 5, valued at £1,128; and Germany 4, valued at £2,064.

American Cars Regaining Former Ground.

American models, including Canadian, which are all from branch or affiliated United States factories, made up 98 per cent of these imports by number; in 1922 they constituted 94.3 per cent. It would appear, therefore, that the American car has made up most of the ground lost in previous years, during which the relative number sank from 99 per cent in 1917 and 1918 to 98 per cent in 1919, to 96 per cent in 1920, and to 87 per cent in 1921. In view of the growing tendency to supply the South African market from Canada, as a result of preferential tariffs and other factors, American direct shipments will probably never equal the record shipments of 1920, and the Canadian total will tend to increase in both number and value.

The British car as a whole depends on the patronage of Britishers in South Africa who want high-grade products and are willing to pay a higher price for the English custom-made car than for the American quantity-made vehicle. The French and Italian cars have a small but growing trade, the French largely in Renaults and the Italian in Fiats. German imports, which have shown but slight increase, are made up of Adlers and Benz, with a certain proportion of small cars that compete with motor cycles.

Present Conditions Promise a Record Year.

The motor trade is probably on as stable a basis as any in South Africa. The financial position among dealers has been strengthened and consolidated in the past year, and there is a tendency to increase their orders. While there are still some firms who have bills outstanding, and more who are cramped for capital funds, the position as a whole is much more satisfactory than at the end of 1921.

Sales in January continued comparatively large in volume throughout the Union, although sales in Rhodesia were hindered by very heavy seasonal rains. The recent agricultural show had a very stimulating effect on sales in the Johannesburg district. Orders at present are in many cases on a "forward" or "to arrive" basis. The demand shows no signs of abatement, and the trade is no longer embarrassed with stocks of cars in bond.

This general prosperity will be shared by the American industry. Its products are in a stronger position that ever before, as a result of the decreasing prices, the higher sterling exchange, and the lower freight rates brought about largely by the competition from the new American shipping line, which is operating a direct service between the United States and African ports with United States Shipping Board vessels.

[A general review of the automotive trade in South Africa for the year 1922 appeared in COMMERCE REPORTS April 23, page 239.]

AMERICAN MOTOR CYCLES NEEDED IN AUSTRIA.

Trade Commissioner William Ford Upson, Vienna, April 21.

Although four American motor cycles are represented in the Austrian market they were not exhibited at the first motor-cycle exhibit in Vienna, March 31 to April 8, owing to the fact that their representatives had none of these machines in stock. This is the more regrettable because the exhibit attracted extraordinary public interest, and wide circles of the population would have been able to compare the high-class American motor cycle, particularly adapted for the rough usage necessitated by Austrian roads, with the higher priced British machine.

Both heavy and light machines were shown; the former type was displayed by 7 German and 2 Italian firms, 1 Swiss, and 1 Belgian, while the light type was exhibited by 3 Austrian and 14 German firms. Considerable business was done during the show, one foreign concern having sold 10 motor cycles of the $300 class, another having sold 8 machines of the $500 class, and several others reporting a number of sales.

Austria's Potential Market Worth Cultivating.

The potential market in Austria for motor cycles at present is unusually encouraging. The economic consequences of the war have so hampered all plans for developing motor and rail communications that the nature-loving inhabitants have turned to the motor cycle as an economic means of renewing their old-time week-end pleasure trips. In addition, the sporting instinct has been awakened throughout the country, and all classes are manifesting considerable interest in motoring, football, swimming, bicycle racing, rowing, and other sports.

The possibility of developing the use of the motor cycle in Austria for business as well as for sport is very favorable, and the same may be said of Poland and Hungary and, to a somewhat lesser extent, of Yugoslavia. American manufacturers interested in these future markets should take action at an early date.

The road problem, which has been serious from a financial standpoint, will undoubtedly be solved in the near future; the 1923 appropriation for road construction amounted to the equivalent of $400,000, as against $6,000 in 1922.

Austrian Representatives Need Manufacturer's Aid—Prices.

There are very few firms in Vienna at the present time with sufficient resources to develop properly the sale of motor cycles in the market unaided, and American manufacturers will be able to secure their share of the awakening trade only by extending assistance.

Public interest in heavy motor cycles as yet is concentrated for the most part in British machines, which are offered c. i. f. Vienna at the following prices: Ariel, $290; B. S. A., $330; Norton, $430; Sunbeam, $490. In addition the German "Mars" cycle, 5/7 horsepower, is offered at $500; the German "Zuendaph" cycle, 2¼ horsepower, at $240; and the English "Douglas," 2¾ horsepower, at $280. Rebates are often granted on the above prices, however, owing to the keen competition among the agents for the various makes. It appears that authorizations have been granted for price reductions of as much as 10 to 15 per cent in order to make a sale to a desirable customer who would become a source of propaganda for additional sales.

[The full report of Trade Commissioner Upson, containing a detailed description of the manner of choosing an agent to handle the above territory and of the necessary work that must be done to push sales of any given make of motor cycle, may be obtained from the Automotive Division through the proper district or cooperative office by requesting Exhibit No. 9041.]

American Piston Rings Find Limited Market in United Kingdom.

Assistant Trade Commissioner William M. Park, London, May 2.

While the United Kingdom can not be said to offer a market of wide scope for the sale of American piston rings, it does present certain opportunities that should not be ignored by piston-ring manufacturers in the United States.

These sales possibilities consist mainly in piston-ring replacements for the comparatively large number of American motor cars in use throughout the country. No considerable volume of business with British motor-car manufacturers has been done, however, or is to be anticipated, as the larger number make their own piston rings and the rest depend mainly on the half-dozen independent firms who manufacture rings in the United Kingdom. Even the replacement channel is partly closed through the preference of owners of and dealers in one low-priced American car to purchase from the British branch of this company direct, where they can obtain piston rings much more cheaply than through other agencies.

Generally speaking, prices for piston rings imported from the United States do not compare favorably with the local product. For competitive purposes an American ring would have to retail in the British market at about 50 cents. At present American piston rings sell for considerably more than this, owing primarily to the import duty of 33⅓ per cent.

It is the general opinion of automobile-accessory dealers that increased business would result for the sale of American piston rings in the British market if manufacturers would cut their prices sufficiently to establish a secure foothold here. British owners of American cars prefer to obtain their piston-ring replacements from the American manufacturer or agent where possible and just now are even willing to pay a slight premium over the cost of rings manufactured locally in order to obtain the American product.

It is not likely, however, that this condition will endure, as British manufacturers are copying American sizes and designs in so far as compatible with the size of their output for British motor cars. Piston rings which fit the various models of engines built by the larger manufacturers of American cars which are not firmly entrenched in England will continue to sell by necessity, though it is doubtful whether there is any increasing volume of business to be anticipated in the way of stocking full lines of American piston rings with British dealers.

Marine-Engine Market in Yucatan Needs Developing.

Consul O. Gaylor Marsh, Progreso, May 4.

Although there is a considerable amount of local traffic along the coast line of the Progreso consular district, which comprises the greater part of the Mexican Peninsula terminating in Yucatan, most of it is carried in small boats known as "canoas." It is estimated that not more than 50 motor boats are in use, varying from outboard motors to larger ones of 75 horsepower and all of American manufacture. This coastal traffic takes care of the provisioning of settlements, the carrying of passengers, and the transporting to larger export centers of salt, chicle, and henequen (sisal). There is also an important local fishing industry on the coast, in which sailboats are used.

The scarcity of launches and motor boats among the hundreds of small craft on the Yucatan coast is accounted for primarily by the limited quantity and high cost of fuel that has to be brought in from Tampico and Puerto Mexico at great expense, subject to excessive port charges at Progreso and other points. Other factors limiting the market have been the custom of the people, the necessity of highly paid union crews, the lightering of cargo in the principal port with steam tugs, and the fact that the wealthy people have not yet taken to pleasure yachting.

The difficulty met by the sailing vessels, however, in traveling against the prevailing westerly winds will undoubtedly cause wider adoption of marine engines on the fishing craft. Furthermore, three capacious tanks for the storage of fuel oils have recently been erected in Progreso to supply oil-burning locomotives, and this may bring about lower fuel costs and stimulate the use of marine motors.

Marine engines have been purchased in the past either direct from the factory or through export commission houses or through local agents. Although no established form of quotation prevails, it would be convenient and most satisfactory to quote prices f. o. b. United States port. Terms of credit will have to be handled separately in each case.

[Trade lists covering local hardware and machinery dealers and commission houses in Progreso may be obtained by interested manufacturers of marine engines from the Automotive Division through the proper district or cooperative office on requesting Exhibit No. 93536.]

British Motor Exhibition Dates Changed.

Assistant Trade Commissioner W. M. Park, London, April 30.

The 1923 Motor Transport Exhibition, at Olympia, has been postponed from October 11–20 to November 22–December 1, and the motor-cycle show at the same place will be held October 15–20, before the passenger-car show. The display of commercial vehicles promises to be of special interest and importance this year, in view of the fact that such an exhibition was abandoned last year. No opportunity has been given to prospective purchasers to inspect a full line of British commercial vehicles since October, 1921.

New Motor Route Across Mongolia.

Consul Samuel Sokobin, Kalgan, China.

A new automobile route between China and Outer Mongolia is being tried by a Chinese company, with two trucks and a five-passenger American touring car. This new route makes Ping Ti Ch'uan the southern terminus instead of Kalgan, whence all previous motor services to Urga, capital of Outer Mongolia, have started north; thus, the almost impassable Kalgan Pass is avoided, with its destructive influence on cars and tires. The last 2 miles of the 15-mile Kalgan Pass are extremely steep, filled with huge bowlders, and pitted with deep holes by the descent of water from the plateau at certain seasons of the year. Frequently a loaded car requires the assistance of three or four mules or horses and of oxen; depreciation of equipment is so great that companies operating on that route have been making very little money at $80 Mexican per passenger, one way. Ping Ti Ch'uan is on the Mongolian Plateau, 190 miles northwest of Kalgan, where the

Peking-Suiyuan Railway has already made the ascent; cars starting from that point have a flat and easy run to Pangkiang, where the road meets the Kalgan-Urga caravan route. Cars from Ping Ti Ch'uan reach Pangkiang within four hours, while Kalgan cars do not get there until the second day out. The saving in time is not the essential feature of the new route, however, for most passengers to and from Urga have to pass through Kalgan anyway, and to go by way of Ping Ti Ch'uan necessitates a longer rail journey; the saving will occur instead in repairs and replacements. The company which is testing the new route believes that it can operate with profit at $65 per passenger and pay the passenger's rail expenses between Kalgan and Ping Ti Ch'uan out of the $65. If its belief proves well founded, other companies will probably adopt the Ping Ti Ch'uan route.

Chinese Motor Sales Hampered by High Fuel Costs.

Trade Commissioner Lansing W. Hoyt, Shanghai.

While the lack of roads in China is the main drawback to any large volume of motor sales in that country, exorbitant license fees and high gasoline prices are hurting the motor trade to a greater extent than is generally supposed. In Shanghai, where half of the motor vehicles are registered, the municipal council revenue office collects on an average $50 gold per year from each motor-car owner. Gasoline is not obtainable at retail stations for less than 50 cents gold per American gallon.

As the American car appeals to the Chinese of moderate means, operating costs are a very important factor. The owners of the higher-priced European cars do not consider expense, but it is different with the man to whom American low price and good value appeal. Although the 5,000,000 gallons of gasoline imported annually into China can not be considered a large market from the foreign oil refiner's viewpoint, it would seem that the American motor-car manufacturer, whose cars are driven by 80 per cent of the motorists in China, should be able to secure the cooperation of the large oil interests in increasing the use of motor vehicles and thus enlarging the sale of gasoline.

AUTOMOTIVE DIGEST.

China—Bus Concessions Granted at Shanghai.

A concession for the establishment of an extensive motor-bus service has been granted by the municipal council of the International Settlement. Provisions are made for the establishment of a service on the Nanking and Sechuen roads within 6 months and on other routes within 12 months. The terms further provide that 30 busses must be in operation within 6 months, and that the maximum fares shall be 10 cents Mexican per mile, first class, and 5 cents per mile, second class. The council, in cooperation with the French municipal council, has also agreed to grant 200 licenses to the representative of a British manufacturer for pedicab operation. (F. H. Kreis, Shanghai.)

Norway—Automobile Hotel and Clearing House, Christiania.

An automobile hotel, to be erected in the heart of the residential section of Christiania in 1923, will be six stories high, modern in every respect, and with space for 35 cars. Repairs can not be taken care of, owing to the residential laws; but a tire and accessory store will be conducted, carrying a full line of motor equipment, and a laundry department will take care of the washing, finishing, and polishing of cars; a paint shop also will be installed. Perhaps the most important function of this hotel will be its used-car facilities. The owners will not handle new cars, but will devote their time and efforts to making this place a clearing house for all dealers, where trade-in cars can be cleared quickly and satisfactorily. It is believed that the company will be able to aid considerably in the solution of the used-car problem in Christiania. (Consul H. E. Carlson, Christiania.)

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Latin America:
Automobile market in Brazil active.
Active market in Argentina for automobiles.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

VALUE OF SMALL SHIPMENTS IN DEVELOPING MARKETS.

An important foreign lumber importer who spent some time in the Lumber Division obtaining information in regard to species of American woods and their uses, has recently reported difficulty in obtaining small sample shipments. Many lumber or steamship companies do not seem to care to trouble with less than cargo lots. The importer says that north European steamship lines will take a parcel as small as 10,000 feet at a rate very little more than for 200,000 feet, and north European exporters are always willing to make up a small mixed parcel to any specifications desired. American lumbermen do not seem disposed to do this, and American steamers quote rates on small parcels at such high figures that a sample shipment would invariably result in a loss to the importer. No doubt this is one reason why American lumber is not spreading out into new markets as it should.

SOME FOREIGN SPECIFICATIONS TOO STRICT.

Many foreign users of American timber do not seem to be aware that such timber is obtainable in anything but long lengths. An instance recently came to the attention of the Lumber Division. A British broker desired to obtain American rock elm logs in lengths up to 40 feet to be used for "rubbers," the heavy timbers on the outside of a ship to form bumpers in rubbing against docks, etc. The shipyards using this stock for years have been accustomed to specify long lengths because in years past this stock was not difficult to ob-

tain. These shipyards, however, apparently fail to realize that the prices of long lengths of rock elm timber at present are almost prohibitive. The bureau's office in London is now trying to have the shipyards in question modify their specifications whereby shorter lengths can be used. This experience reminds one of the Spanish importer who a short while ago asked a well-known lumberman in this country if Douglas fir on the Pacific coast was obtainable in smaller dimensions than 24 by 24 inches. This impression was no doubt received from advertising literature depicting large timbers produced on the Pacific coast. There are still thousands of foreign concerns who prefer to order 30 to 40 foot lengths from which they cut shorter stock.

It is incumbent upon American exporters to remedy this situation. Foreign agents and brokers usually take but a small interest in such matters, and if they can not obtain American lumber and timber in the sizes required, they may offer substitutes from other countries. Representatives should be instructed to investigate such cases, and foreign buyers should be informed of the increased cost of such material over smaller dimensions.

Successful Koenigsberg Lumber Exposition to be Repeated.

Assistant Trade Commissioner E. M. Zwickel, Berlin, Germany, April 25.

The first lumber fair and conference held at Koenigsberg in Prussia, March 18 to 22, 1923, for the purpose of restoring the eastern and northeastern European lumber trade and renewing relations with central Europe, was considered a success from the viewpoint of cementing relationships and arriving at better understandings, although the amount and volume of sales actually negotiated was not as satisfactory as might have been expected. However, numerous trade relations were formed and inquiries made, which it is hoped will ultimately lead to business after there is a greater degree of stability and the prevailing economic depression ceases. Another factor which contributed to the light sales was the decrease in lumber prices in general just before the fair. Those who had lumber to sell were not anxious to dispose of their products at the lower price levels, and buyers anticipated still further price decreases. Rough log price quotations had decreased as much as 25 per cent from the peak and sawn lumber decreased to the extent of 35 per cent.

Countries Represented—Russian Difficulties.

The fair was well attended by merchants, traders, Government officials, and trade representatives from Soviet Russia, White Russia, Georgia, Ukrainia, Lithuania, Latvia, Finland, Free City of Danzig, Memel, Poland, Czechoslovakia, etc. Various German officials presided. British, Scandinavian, and Dutch lumbermen were also present, although French and Belgians were not.

The outstanding subjects discussed at the conference were, first, the alleviation of transportation difficulties, such as the necessity for easier and more rapid movement of lumber as well as the need of freight rate decreases, and second, the dire need of capital and credit.

Russia's greatest difficulty appears to be its transportation problems. There was some disappointment at the conference in regard to the ability of Russia's lumber trade to be restored at an early date, and there were pessimistic utterances concerning her inability to make deliveries. It is claimed that it usually requires many months before contracted Russian lumber actually arrives at its destination. It is also reported that the Russians are looking for concessions for various timber tracts.

In general the Koenigsberg fair officials were well satisfied with the outcome of this exposition, as they claim that much has been done to renew and restore the pre-war lumber trade interests of central and western Europe with those of northeastern Europe and Russia. Consequently it has been decided to hold another fair during the month of October of this year.

Mahogany and Spanish Cedar Production in Nicaragua.

Consul William W. Heard, Bluefields, April 27.

It is conservatively estimated that the total production of mahogany and Spanish cedar from the eastern part of Nicaragua for the current year will be 20,000,000 feet, but the quantity of Spanish cedar will not exceed 15 per cent of the total production. Cutting began early after Christmas and has progressed rapidly. Representatives of the mahogany companies who have recently returned from inspection trips to the numerous camps report that in many cases the total quantity contracted for has already been cut and rolled to the banks of the streams. The weather continues good for cutting, being exceptionally dry, so that the contractors now only await favorable rains in July to bring their logs to the seaboard.

All the wood contracted for has been taken by eight American mahogany companies, and the contract prices have ranged as high as $75 per thousand feet delivered at the mouths of the several rivers. Shipments are made from Cape Gracias a Dios, Prinzapolka, Bluefields, and the Colorado Bar, Costa Rica. The wood from the latter port is cut in the vicinity of Lake Nicaragua, floated down the San Juan River, finally reaching the seaboard at Colorado Bar, as the mouth of the river at Greytown has become almost entirely filled up with sand.

The cutting of mahogany has been carried on in this district for over 70 years. At the beginning of the industry the trees were located close to the main rivers, but as the cutting continued the contractors were forced to proceed farther inland and to utilize the smaller streams. Wood is now brought from distances of 200 miles and over.

Reports made by interested persons show that there is plenty of mahogany to be had in this country; the only difficulty to be overcome is the cost of getting it hauled to the streams. One contractor recently purchased a large caterpillar tractor which is working very successfully, performing the work of eight teams. The bulk of the labor is done by Indians near the coast, while farther inland the laborers are of Spanish descent.

Methods of Payment—Loading of Vessels Difficult.

The contracts for cutting usually provide for advances to the contractor of sums up to 40 per cent of the total contract amount. This is advanced monthly for a period of seven to eight months. One inspection is made during the latter part of the cutting season to see that the contractor is complying with the terms of his contract. When the quantity of wood is delivered at the seaboard to cover the amount of money advanced further payments are then made as the wood is delivered.

One of the most difficult features of the mahogany business is the loading on board steamers. With the exception of Bluefields the other loading ports are in the open roadstead, which during the loading period, July to December, is frequently very rough. In many cases vessels have had to wait up to 30 days for the weather to moderate so that loading could commence. In addition to this the rough seas often cause the rafts to break as they are being towed out to the ship, permitting many logs to be carried away and lost.

German Foreign Trade in Lumber.

Assistant Trade Commissioner E. M. Zwickel, Berlin, April 11.

The imports of rough logs for the year 1922 into Germany amounted to 3,010,400,000 board feet, while the exports were approximately 636,000,000 board feet, a net import of 2,374,400,000 board feet. The second item of importance in Germany's foreign lumber trade was that of sawn timber, of which 1,378,000,000 board feet were imported and 349,800,000 board feet exported, or a net import of 1,028,200,000 board feet. There has been a considerable increase in the past year of imports of wood to be used for paper production, which amounted to 720,800,000 board feet, the exports being negligible.

Germany, with her depreciated currency, has during the past year found it more necessary than ever to resort to her neighbors for her lumber supplies rather than to buy overseas. Czechoslovakia was the chief source for rough logs, mine timber, and wood for paper, although the improvement in the Czech currency during the latter part of the year and the depreciation of the German mark during the same period tended to curtail this trade. Poland was also an important supplier of rough logs. The greatest portion of sawn timber, 479,120,000 board feet, was received from former German territory, West Poland. The difficulty of importing American lumber, owing to the high value of the dollar, is reflected in the German import statistics which show that only 19,080,000 board feet of sawn pine were imported in 1922. This sum represented only 1½ per cent of the total German lumber imports and was chiefly southern yellow pine.

[In the official German foreign trade statistics showing the imports and exports of wood and lumber, the quantities given are expressed in metric hundredweight. One of the leading German lumber trade journals converted the official weight statistics to cubic meters and published the above data. Cubic meters were converted to board feet by the lumber division.]

Exploitation of Pine in Oaxaca.

Vice Consul George E. Seltzer, Salina Cruz, Mexico, March 23.

The State of Oaxaca, Mexico, contains pine forests covering 125,000 hectares (1 hectare equals 2.47 acres), which have not yet been exploited, according to a report made by the inspector of commerce of the State of Oaxaca. The construction of a road has recently been undertaken from Sierra to the city of Oaxaca, which will probably be completed within a short time, and which will open up these forests. The region has several waterfalls that can supply all the power necessary for the operation of machinery, and a sufficient supply of labor on a relatively moderate basis of wages can be obtained.

The trees produce 400 grams of rosin daily in the summer and 300 grams in the winter, for which there is a great demand in foreign countries. The pitch or tar can be sold in Mexico, where large quantities are used in the manufacture of soap. If, with the primitive methods that are still used, a considerable quantity of turpentine is obtained, the production would naturally be much larger if modern methods were employed.

The lands referred to belong to the villages of San Miguel del Valle, Ixtlan, Xagacia, Amatlan, and Lachates. The titles to the lands, according to the report, are absolutely clear and legal, inasmuch as the area consists of common lands acquired during the first settlement of the country and which have never been in dispute.

Albanian Timber Concession.

The Government of Albania has granted to "Inag" (International Aerogeodetic Co. of Danzig) the exclusive right to exploit the State forests. The life of the contract is 20 years from the date of signature, and within this period the company is required to cut and export timber material up to the minimum of 4,240,000 board feet during the first 2 years and 21,200,000 board feet annually for the remaining 18 years.

For the fulfillment of its obligations the company must install and keep in operating condition all sawmills necessary.

The following are the stumpage prices agreed upon: Oak timber, $2.73 per thousand feet; pine, $2.28 per thousand feet; and ash and poplar, $1.82 per thousand feet. The company agrees to replant the forests as they are cut down. For the Government needs (in no case to exceed 10 per cent of the cutting) the company is required to furnish timber material at cost.

Forestry in Soviet Russia.

Abstracted by the Eastern European Division from the Izvestia, Moscow.

The timber area of Soviet Russia under the jurisdiction of the Forestry Administration amounts to 514,966,138 dessiatines (1,390,408,575 acres), of which 147,416,513 dessiatines are located in European Russia (exclusive of the forests of the autonomous republics and Ukraine), according to data compiled by the Russian Forestry Administration as of January 1, 1923. The total area of exploitable forests amounts to 327,109,727 dessiatines, including 117,928,669 dessiatines in European Russia and 209,181,058 dessiatines in Asia. The gross income from all Russian forests (all the forests have been nationalized) is estimated for the fiscal year of 1922–23 at 45,000,000 gold rubles.

CUT-OFFS.

Egyptian Imports Decreased.

In January of this year Egyptian imports of building lumber from all countries were 20,866,248 board feet, compared with 56,729,220 board feet December of last year and 25,427,100 board feet in January, 1922. (Consul S. Bertrand Jacobson, Alexandria, March 22.)

Polish Timber Market.

Following the prohibition of raw timber exports a certain speeding up of the local sawmills has become evident. In many instances the mills are working two shifts, their exportable production being generally

shipped to Germany and Czechoslovakia. The furniture industry, however, shows an increasingly weak tendency in line with the prevailing currency and credit stringency and the slackened local demand due to the present business depression. (Extract from Rzeczpospolita, April 16, prepared by H. B. Smith, acting commercial attaché, Warsaw.)

Erection of Buildings for Poor in Athens.

No official steps have been taken or definite plans made as yet for carrying out the Greek Government housing scheme announced in COMMERCE REPORTS of May 14, according to a cable just received from C. E. Dickerson, jr., clerk to the trade commissioner in Athens. The cable states that the decree under consideration provides (1) that land can be taken at the discretion of the Government to be used for erection of houses for the poor; (2) that building materials to be used for this purpose can be imported free; and (3) that the houses will be exempt for 20 years from the tax on buildings.

Ply-Wood Market in the United Kingdom.

Ply wood is being sought in the United Kingdom by those who have hitherto been ignorant of its merits. The business has been cultivated with a due regard for the wishes of users, and judging from the peculiar hold which this branch of the trade has secured, its place in trade is established. The market is short of birch ply wood. Alder, first and second quality, is in good demand, especially in the one-tenth to one-fifth inch material. Gaboon mahogany, red gum, and Douglas fir ply wood are in strong demand. North European pine and cottonwood are finding a ready market. Oak ply woods are not scarce, but all grades continue in demand. Prices are very firm, with an upward trend. (Vive Consul Charles L. De Vault, London, March 13.)

English Trade Watching United States Prices.

Due to editorials and articles which have appeared in American papers relative to the extreme high cost of building in the United States, together with the great boom in house building, an impression has been created in England that prices for lumber generally in the United States have reached their peak, and on that account merchants on this side are inclined to wait for lower prices. On the other hand, there is a fairly widespread impression on this side that in spite of political difficulties the timber trade in this country is going to improve. Contracts for southern yellow pine have gradually hardened during the last six months; walnut lumber is again beginning to come into the market in quantities. It is understood here that American interests are very active in acquiring sources of African and Honduras mahogany. (Trade Commissioner Alexander V. Dye, London, May 7.)

Canadian Lumber Census for 1921.

The total production of lumber in Canada in 1921, recently furnished by the Dominion Bureau of Statistics, amounted to 2,869,307,000 board feet, of which British Columbia furnished 996,266,000 feet, Ontario 734,054,000, Quebec 649,334,000, New Brunswick, 269,983,000, and Nova Scotia 115,246,000 feet. The 1921 cut decreased one-third in quantity from the production in 1920. The average value of lumber at the mill decreased over $10 per thousand feet.

An increase was reported in the quantities of lath and shingles produced, amounting to over 5 per cent and 4 per cent, respectively, accompanied by decreases in the average value of both. Other products which increased in total value were slack cooperage, sawn ties, poles, posts, mine timbers, and piling. Decreases were reported in veneer, tight cooperage stock, and dressed lumber. (Vice Consul Gilson G. Blake, jr., Ottawa, April 30.)

Additional information regarding lumber appears in this issue under the following section:

Cable review, Far East: Malay States conducting tests of lumber preservatives.
Chemicals: Exportation of aspen from Poland prohibited.

PAPER

John Matthews, jr., Chief, Paper Division

NEGLECTING FOREIGN BUSINESS.

An editorial in a recent issue of a British publication notes that "consumption in the United States is continuing to develop at an enormous rate" and adds that "there is some satisfaction in this fact from the point of view of the British paper maker, seeing that other markets are thus far relieved of competition." This statement bears directly on the present unfortunate tendency in the United States to ignore the foreign demand and thus sacrifice the prestige and good will that has been built up through so much effort in the past and is a distinct invitation to foreign producers to take the business that certain American firms are so thoughtlessly throwing away. This policy means that should the domestic demand decline and a foreign market be desired, American manufacturers will have to start again at the bottom rung of the ladder leading to success in the export field.

INCREASE IN CANADA'S EXPORTS OF PULP AND PAPER.

Based on report from Consul H. Merle Cochran, Montreal.

Figures for the Canadian fiscal year ended March 31, 1923, indicate the good recovery made by the pulp and paper industry during the past 12 months, exports of the various classes of pulp and paper without exception exceeding those of the previous year, both in quantity and value. That they failed to reach the valuation of the 1920–21 exports is due in most cases to the lower prices prevailing rather than to a smaller volume of shipments. Exports of newsprint, which formed the bulk of the paper exports during the past year, amounted to 1,127,305 tons, as compared with 847,746 tons last year and 946,305 tons in 1920–21. Exports of wood pulp, with the exception of unbleached sulphite, also show a gain, as compared with the two previous fiscal years, total shipments reaching 951,374 tons, as compared with 696,373 tons in 1921–22 and

804,328 tons in 1920–21. Exports of pulp wood, on the other hand, while exceeding those of the year before by 270,495 cords, are still 519,005 cords under those of 1920–21. Exports of pulp and paper from Canada during the past three years are contained in the following table:

Canadian pulp and paper exports.

Item.	Fiscal year 1920–21.		Fiscal year 1921–22.		Fiscal year 1922–23.	
	Short tons.	Value.	Short tons.	Value.	Short tons.	Value.
Newsprint	946,305	$78,922,137	847,746	$64,636,627	1,127,305	$72,667,826
Book paper	3,651	779,762	972	201,764	2,443	293,596
Other paper		12,401,407		4,696,027		6,601,519
Total		92,103,307		69,533,418		79,567,941
Wood pulp:						
Sulphate	131,824	12,160,735	133,143	7,906,872	165,831	9,262,393
Sulphite—						
Bleached	108,748	15,195,065	104,132	8,325,617	178,227	13,073,289
Unbleached	267,962	27,764,419	160,242	9,236,296	249,706	11,096,374
Mechanical	295,794	16,491,318	293,856	10,456,092	357,610	9,552,892
Total	804,328	71,552,637	696,373	35,924,877	951,374	42,986,948
Pulp wood	[1]1,615,467	21,513,594	[1]825,967	9,829,150	[1]1,096,462	10,755,655

[1] Cords.

Canadian exports of paper, wood pulp, and pulp wood for March, 1923, were valued at $14,935,682—an increase of $3,307,367 as compared with March, 1922, in which month similar exports totaled $11,628,315; and an increase of $4,085,876 over the February exports of 1923, which amounted to $10,849,806.

Exports of paper in March, 1923, were valued at $9,544,019, wood pulp at $4,408,227, and pulp wood at $983,436. Exports of newsprint alone reached 127,064 tons, valued at $8,609,766, thus establishing a high record for newsprint exports, which exceeded the former high record of 106,619 tons in the month of March, 1922, by 20 per cent. Exports of wood pulp amounted to 84,170 tons, which were fairly evenly divided between the different classes, the largest shipments consisting of unbleached sulphite, which amounted to 24,769 tons. Shipments of pulp wood, all of which came to the United States, amounted to 113,493 cords. The United States also received practically all of the newsprint and wood pulp, while Australia and New Zealand were the leading customers for book and writing papers, and the United Kingdom for kraft wrapping paper.

Japanese Paper Production and Sales in February.

Commercial Attaché James F. Abbott, Tokyo.

According to the monthly bulletin of the Japan Paper Association, production and sales of paper in Japan during the month of February, 1923, are represented by the following figures:

Japanese paper production and sales in February.

Items.	Production.	Sold.
	Pounds.	*Pounds.*
Newsprint	26,065,137	25,137,391
High-grade print	7,468,552	10,430,945
Bookpaper	7,321,061	9,714,318
Colored paper (including print, wrapping, etc.)	1,196,527	828,424
Wrapping (not including above)	4,243,060	4,161,295
Match paper	337,363	344,972
Native and all other paper not mentioned above	10,596,291	11,824,503
Total	57,637,993	63,941,848

Finnish Paper and Pulp Exports in 1922.

Exports of pulp and paper from Finland during the year 1922 amounted to 432,213 metric tons, valued at 1,304,443,000 Finnish marks—an increase in quantity of 128,609 metric tons and in value of 248,721,000 Finnish marks over 1921 exports.

Pulp shipments, which totaled 235,463 metric tons, consisted largely of sulphite, shipments of this product reaching 125,061 metric tons, while shipments of mechanical pulp and sulphate amounted to only 51,517 and 58,885 metric tons, respectively.

Exports of newsprint, which is the largest single item, both from the standpoint of quantity and value of product, increased from 93,896 metric tons, valued at 428,658,000 Finnish marks, in 1921, to 130,083 metric tons, valued at 468,253,000 Finnish marks, in 1922. Exports of wrapping paper during the same period increased from 17,528 metric tons to 30,618 metric tons; and of pasteboard from 12,536 to 24,690 metric tons.

While paper and pulp exports, without exception, have increased during 1922, as compared with the previous year, the largest gains were made in chemical pulp, pasteboard, and wrapping paper. The average price per ton during 1922 was somewhat lower than in 1921, but this decrease was probably offset to some extent by the rise of the Finnish mark in the latter part of 1922. (The Finnish mark averaged $0.02 in 1921 and $0.02⅛ in 1922.)

Side Runs of the Paper Trade.

Polish Cellulose Production.

The Polish Ministry of Commerce reports that the production of cellulose during 1922 amounted to 17,800 metric tons. This was equal to 64.8 per cent of the 1913 figure. At the rate of consumption which held during February of this year, Polish paper mills will require approximately 42,000 tons of cellulose during the whole of 1923. With the opening of a new plant at Czulow, Polish Upper Silesia, which is expected to produce about 6,000 metric tons annually, it is estimated that the Polish pulp mills will be able to furnish about 55 per cent of the country's requirements. (Consul General L. J. Keena, Warsaw, April 17.)

German Paper in Mexico.

A German manufacturer has been developing a large trade in writing paper as a result of a special process which gives him decided advantages under the Mexican tariff schedule. The Mexican customs admit white paper with not more than 40 per cent ground wood under a duty of 23 centavos per kilo, while paper containing 40 to 70 per cent or more of ground wood pay 12 and 5 centavos, respectively. By an effective method of bleaching and sizing a paper having a large groundwood content, this manufacturer can supply a very presentable sheet, which is popular in the market because of the low cost at which it can be landed under the above-mentioned provisions. (Consul Thomas D. Bowman, Mexico City, May 1.)

Additional information regarding paper appears in this issue under the following section:

Cable review, Latin America:
Brazilian demand for paper shows no improvement.
European prices 25 per cent below American in Argentina.
Tariffs and trade regulations:
New duty on certain papers in South Africa.
Reduced Finnish export duty on wood pulp and paper.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

ITALIAN CHEMICAL-FERTILIZER CONSUMPTION AND INDUSTRY.

Consul Leon Dominian, Rome.

Increasing Consumption of Phosphates for Fertilizing Purposes in Italy—Plans Under Way for Developing New Sources of Supply.

Fertilizer Consumption and Prices.

The consumption of phosphates in Italy during 1923 will amount to 1,070,000 tons, according to estimates by the Montecatini Co. During 1922 the consumption amounted to 900,000 tons. About two-thirds of the entire Italian production is supplied by the Montecatini Co. The total capacity of this concern and its affiliated companies, such as the Spicas Co. of Palermo, is stated to be 800,000 tons. The estimate of increase in 1923 is based on the assumption that more agricultural workers will return to the farm.

According to estimates of the Federation of Agricultural Consortiums of Piacenza, the annual Italian consumption should shortly reach 1,800,000 tons. These estimates forecast an increase in the Italian production of wheat by the application of intensive methods of agriculture rather than by an extension of the areas under cultivation.

Prices of fertilizers in Italy at the middle of April were: Mineral perphosphate, 290 lire per ton; calcium cyanamide, 950 lire; nitrate of soda, 1,350 lire; and sulphate of ammonia, 1,850 lire (1 lira=$0.0486 at present exchange).

New Fertilizing Works Planned.

In view of the development of agriculture in the northern part of Italy, the Montecatini Co. is planning to build at Venice a new factory for the production of superphosphate. This factory is designed for a capacity of 100,000 tons, but its production for the present will be restricted to 30,000 tons.

The capacity of the Montemarciano plant has been doubled and amounts to 60,000 tons. At Taranto plans are under consideration for the increase of the local plant's capacity to 30,000 tons, while intentions are to increase the Bagnoli (Naples) plant's capacity to 30,000 tons.

The Montecatini Co. has also bought land at Cagliari in Sardinia for the construction of a phosphate plant to supply the island's needs. In Sicily the Montecatini has entered into agreements with the Societa Siciliana di Prodotte e Concimi Chimici for the production of 30,000 tons of superphosphate at Campofranco. On this account the construction of the new plant at Licata, in southern Sicily, has been abandoned.

Niter Consumption in Italy.

The annual consumption of niter in Italy amounts to 20,000 tons. Most of this quantity is imported either in the form of nitrate of soda from Chile or of sulphate of ammonia from the United States or England. The Italian production is restricted to small quantities of cyanamide or of sulphate of ammonia obtained from gas works. The last annual report of the Montecatini Co. estimates that the Italian consumption will soon reach 60,000 tons. During the war the Italian Government purchased 258,000 tons of Chilean nitrates at a cost of 600,000,000 lire.

An effort is being made by the Montecatini Co. to increase the Italian production of this chemical. As a result, the company is interested in various chemical-producing plants in Italy. Among these is the Piano d'Orte chemical factory, owned by the Societa Italiana per la Fabbricazione di Prodotti Azotati, where cyanamide is produced.

It is believed that the development of the synthetic-ammonia process will contribute to the increase of the Italian niter production. At Terni the process is being worked, and construction for an increased capacity is being carried on. The Montecatini Co. is largely interested in the Societa Elettrochimica Novarese, in whose Novara plant the synthetic-ammonia installations recently have been completed. Satisfactory results from the Fauser patent have been obtained here. According to the Italian patents the hydrogen required in this work is obtained by electrolysis.

The Montecatini Co. also is interested in the Societa Italiana Prodotti Azotati, which has made agreements with the Societa per l'Ammoniaca Sintetica Processo Casale for the sale of its products to farmers. Thus the sale of niter products derived from the synthetic ammonia process is controlled in Italy by the Montecatini Co.

Production and Consumption of Calcium Cyanamide.

The production of calcium cyanamide in Italy during 1922 amounted to 33,422 tons, as against 16,000 tons in 1921. It is estimated that the 1923 consumption may amount to 40,000 tons. The consumption of this product is heavier in northern Italy and varies from a maximum of 15 kilos per hectare of cultivated land (7 pounds per acre) in the Province of Novara to about one-half kilo per hectare (one-fifth pound per acre) in the Provinces of southern Italy, except Naples and Salerno.

Nitrate, Superphosphate, and Sulphate of Ammonia Consumed.

The Italian consumption of Chilean nitrate in 1922 amounted to 25,000 tons, while that of ammonia nitrate was 10,000 tons. A decrease in the use of both of these products occurred in 1922 as compared to 1921. The consumption of superphosphate varied from 10 kilos per hectare (about 9 pounds per acre) to over 200 kilos per hectare (about 85 pounds per acre). The largest amount was consumed in the northern Provinces of the peninsula, in southwestern Sicily, and the environs of Naples. The Italian consumption of sulphate of ammonia in 1922 amounted to 15,000 tons. The Terni and Piano d'Orte plants are now obtaining ammonia sulphate from cyanamide.

Match Factories in Poland.

Consul General L. J. Keena, Warsaw, April 10.

There are at present 16 match factories in Poland, one having been established recently in former Russian Poland. Of this number, 3 are in former Austrian Poland, 3 in former German Poland, and the remaining 10 in former Russian Poland. Two of the largest factories are in the county of Warsaw and another important factory is located in the town of Czestochowa. Several factories are situated in the eastern and northeastern districts of Poland, where there is an abundance of wood which is especially suitable for the manufacture of matches.

Raw Materials Used for Polish Matches.

The matches manufactured in Poland are safety matches. About 50 per cent potassium chlorate is used in combination with antimony, sulphur, and other substances. The principal wood is aspen, but pine and poplar are used occasionally. At the beginning of 1923 the exportation of aspen was forbidden by the Polish Government, to the satisfaction of the owners of match factories but to the great dissatisfaction of lumber dealers, who are thus obliged to sell their aspen in Poland at lower prices than they could get abroad. The wood is coated with paraffin obtainable in Poland.

Output and Exportation of Matches.

According to figures furnished by the Polish Ministry of Commerce, 84,706 cases, each case containing 5,000 boxes of 100 matches, were manufactured during the first eight months of 1922. Exact figures for the last four months of the year are not available, but it is estimated that more than 50,000 cases were manufactured.

During the first four months of the year only 145 cases were exported, but during the following four months the amount increased to 8,117. Matches exported from Poland went principally to Great Britain, France, and the Netherlands. The Polish Government hopes that matches manufactured during 1923 will total 245,000 cases and that 130,000 cases will be available for export.

The consumption of matches in Poland, not counting a few carloads from a Danzig factory and a few small boxes from Czechoslovakia, is estimated for the whole year at 110,796 cases.

Sulphur Production of Continental Italy.

Consul Leon Dominian, Rome, April 17.

Production from the sulphur mines of the Montecatini Co., near Rimini, amounts to about 40,000 tons a year. The last annual report of the company states that the 1923 output will be limited to this figure in order to enable Sicilian sulphur to find a market on the Italian mainland.

The Montecatini Co. (one of the important mining and agricultural establishments of Italy) has given up its interest in Sicilian sulphur companies and is only interested at present in the Gallitano Sulphur Mine and the Societa Solfifera Siciliana.

The 1922 annual report of the Montecatini Co. states that the recent agreements between American producers and Sicilian sulphur consortiums can not improve the condition of the Sicilian sulphur industry, but that improvement in this industry can only be obtained by reducing the cost of production.

Growing Demand for Candelilla Wax.

Consul Harry L. Walsh, Nuevo Laredo, Mexico, April 7.

A strong demand has developed for the candelilla wax of this section and already a record volume has been shipped from Nuevo Laredo to the United States. The shipments to date from January 1 total more than 80,000 pounds, representing a value of more than $15,000, and at present the indications are that this is only the initial stage.

The practically sudden demand for the candelilla is attributable to four or five factors, but the chief explanation is unquestionably found in a low price, combined with the fact that the candelilla and its uses are becoming more widely known. The present movement is probably for the account of European factories, since all of the shipments through here have been consigned to commission houses of New York City.

The current prices in Nuevo Laredo average 18.5 cents per pound, which is the record low quotation for the local market. The following table shows that the range of quotations has gone from 19 cents to 38.5 cents, the high prices having been reached in 1918 under war conditions.

Exports of candelilla wax from Nuevo Laredo from 1918 to 1923.

Year.	Quantity.	Value.	Average per pound.
	Pounds.		
1918	31,515	$12,159	$0.385
1919	1,596	347	.217
1920	23,066	6,935	.300
1921	6,922	1,699	.245
1922	26,485	5,110	.190
1923 [1]	82,233	15,278	.185

[1] January 1 to April 7.

The candelilla wax comes from the candelilla plant, which grows more or less profusely in the States of Coahuila, Tamaulipas, and Chihuahua. Only an inconsequential amount of the candelilla is produced in the Nuevo Laredo district. The chief relation of this district to the industry is as an assembly point for the production from certain convenient sections of the States of Nuevo Laredo and Coahuila.

Imports of Dyes into Swatow.

Consul Lester L. Schnare, Swatow, China.

The price of foreign dyes in Swatow in 1922 declined gradually and the importation of aniline dyes showed an increase in value of 22,051 haikwan taels ($18,247), as compared with the figures for the same quarter of last year, according to a memorandum prepared by the commissioner of customs in Swatow, describing the trade of this port for the quarter ending December 31, 1922. This increase, at the reduced valuation, represents a considerably larger increase in the quantity imported, due to the fact that the Chinese dyers now generally use foreign dyes instead of native.

Market for Ammonia in Yucatan.

Consul O. Gaylord Marsh, Progreso, Mexico, April 27.

There are in the Progreso consular district (Yucatan) six ice plants of considerable capacity, and a few smaller plants of limited production. These plants

are equipped with American ice-making machinery and the ammonia used in the production of ice is imported exclusively from the United States. There are no large refrigeration plants in the district.

No statistics are available at the Progreso customhouse as to the importations of ammonia, but the consumption of the Progreso consular district is estimated to fluctuate between 1,000 and 2,000 pounds a month.

The New Mysore Distillation and Iron Works.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta, April 5.

The Mysore Distillation and Iron Works, the scheme for which was sanctioned by the Mysore government, commenced operations on January 18 of this year. The works had been under construction for three years, supervised by the managing agents of the Tata Iron & Steel Co., while the designing and installation of the plant were directed by an American firm.

The works consist of 12 retorts capable of carbonizing 240 tons of wood per day; a distillation plant for the recovery and manufacture of by-products, namely, methyl alcohol, acetate of lime, and wood tar; and a charcoal blast furnace, with a daily output of 60 tons of charcoal pig iron, low in phosphorus and sulphur.

The wood for the retorts is supplied by the Mysore forest department from 350 square miles of well-wooded State forest, within easy reach of the works, and is connected by a carefully laid system of forest railway.

Two qualities of wood tar will be recovered from the retorting—a "soluble" tar, which will make a good disinfectant; and the "settled" tar, which possesses wood-preserving properties. The Mysore government is considering a large scheme for the antiseptic treatment of railway sleepers with this wood preservative.

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Latin America:
Market for drugs and chemicals in Brazil.
Announcement of prices causes large sales of Chilean nitrate.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

THE TURKISH OPTICAL GOODS MARKET.

Assistant Trade Commissioner H. B. Barton, Constantinople.

An outline of the types of optical goods in demand in the Turkish market and the sources from which they are received. The possibilities of increasing American trade in this line.

The chief optical articles imported into Turkey are spectacles (either assembled or the glasses and frames imported separately), lenses, and similar articles. There is very little demand for such instruments as field glasses, telescopes, microscopes, etc. The Constantinople trade in spectacles and similar articles may be subdivided into two classes—the wholesale trade, which specializes almost exclusively in very cheap and low quality goods that go to supply a large part of the provincial demand and the demand of the poorer classes generally; and the retail trade of Constantinople, which deals in the better-quality articles. Optical goods are handled in general by large department stores, jewelers, and similar shops, very few firms specializing exclusively in them.

There are almost no statistics available to show what the imports of optical goods into Turkey have been in the past, and none whatever to show such imports since the war. In the years 1910, 1911, and 1912 the average value of optical imports into Turkey was $189,383, of which Germany supplied approximately 29 per cent, Austria-Hungary 16 per cent, and France 28 per cent. These figures include also cameras and accessories, as such goods are considered in the same category as optical material by the Turkish customs. It is known that the imports of optical goods have increased considerably over the above figures since the Armistice of October, 1918, and while inexpensive grades are continually required in considerable quantities in the Provinces, the demand has also grown for a better quality of goods.

Sources of Turkish Imports of Optical Goods.

Since the armistice Germany, which formerly led in the optical trade with Turkey, has found it increasingly difficult to compete successfully with France, and occasional orders have even been placed with American and Italian firms. Despite the depreciation in the mark and consequent increase in prices, however, German goods in large quantities have been imported, and the stocks on hand at the present time far exceed immediate requirements.

Local merchants are of the opinion that to continue business with German firms under present conditions will be very difficult, and they may have to buy in the future from other countries. Indications are that France will be the next country to control the major part of the Turkish market for optical goods, inasmuch as several French firms, which have had considerable experience in trading in this market and are well acquainted with local business methods, will probably make great efforts to win the trade lost by the Germans.

Possibilities for American Trade.

There are several important circumstances which up to the present have impeded the development of the American optical trade in this market. In the first place, merchants state that they are not able to obtain from America the cheap grade of goods required to fill the provincial demand, such as they receive from Bavarian and French firms. Most of the American optical goods offered in the past have been of a quality too high for this market. Secondly, the conditions of payment required by American firms are generally unac-

ceptable to local importers. German, French, and Italian firms ship goods against payment on delivery of shipping documents at Constantinople. This is a very important point and must be taken into consideration by any American firm wishing to compete with the above countries in this market. The latter method of handling business is not recommended, however, unless an agent is appointed to follow the market and keep his firm informed as to prices, conditions, etc., and in general to look after the best interests of his principal. Such an agent would be, preferably, a capable American, or, if this is not possible, some local agent appointed after careful selection. Credit information could be obtained from local banks and documents forwarded for collection through them.

Types of Optical Goods in Greatest Demand.

Spectacles, if of cheap quality, with nickeled steel rims, completely assembled, are required by the Turkish market. Pince-nez in this cheap quality are not in demand. The present price is about 180 piasters per dozen (about $1.25 at present rate of exchange). Another item required to a limited extent in this market and for Asia Minor is magnifying glasses, made of cheap-quality lenses with nickeled steel or brass frames. Medium and better quality spectacles, pince-nez, and lorgnettes are imported chiefly for sale in Constantinople, although there has been an increasing demand for the better quality of goods in the Provinces since the armistice. While imitation tortoise-shell rims, made of celluloid, horn, or similar material, introduced by German firms during the war, are still in demand, there seems to be a tendency to revert to nickeled and silver rims.

The medium-quality spectacles and pince-nez are ordered in a variety of shapes and numbers, and form the most important part of the trade of local opticians. It should be noted that there are very few importers or dealers in Constantinople who have equipment for grinding and adjusting lenses, and therefore practically no unground or semifinished lenses are imported. Consequently, a large variety of numbers and shapes are always kept in stock by dealers, and where special measurements are required the prescription has to be sent abroad to be made to order.

Goggles of all kinds and colored spectacles are imported in small quantities from Germany and France. The demand for this class of goods is gradually increasing.

Under normal conditions the trade in field glasses and similar articles is limited in volume, and although it acquired a certain degree of importance during the war, the demand has been met and present stocks will be quite sufficient for a considerable time to come.

Owing to the present uncertain economic situation, business is stagnant. The demand is light in all optical lines, excepting spectacles; and yet, since local importers on account of prevailing conditions in Germany are considering the transfer of their future business elsewhere, this circumstance might open interesting prospects for the American optical trade.

American Eyeglasses Popular in Algeria.

Consul E. A. Dow, Algiers.

American eyeglasses of all varieties are becoming popular in Algeria. About 800,000 of the colony's population of 5,800,000 are Europeans, the remainder being mostly natives who are too poor and too conservative to buy optical goods. Gradually heavier bows and rims are coming into use, and French women are more inclined to give up the lorgnette and other forms of glasses for more practical instruments. Meantime, the market must be supplied with the narrow-rimmed glass, without bows, which have long been popular with the French people, who form most of the buying population.

A limited quantity of goods should be kept in local stocks to supply urgent demands of tourists, who come here mostly during the winter season. They are mainly English and American middle-aged people of means, accustomed to modern styles of optical goods. In considering the principal market (that of the French buyer) preferences of styles and business methods should be much the same as in France, and if manufacturers are represented in Paris by a branch house or by an active agent, entrance into Algeria might be made through one of these mediums.

American goods in bulk are often imported directly, but most manufactured goods are bought in France, thus saving the retailer in Algeria the trouble of dealing in a strange market in a foreign language, and dispensing him with direct payment of import duties and annoyances of customs formalities.

Markets for Sanitary Ware.

Sanitary Ware in the Argentine Market.

Great Britain has built up a large trade in molded porcelain sanitary ware, but vitrified china and enameled iron washbasins and bathtubs from the United States are finding increased acceptance. Germany, Belgium, and Great Britain are the leading purveyors of pipe and metal fixtures to the Argentine market. Increased private and public construction is accelerating the movement of all kinds of plumbing supplies. (Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.)

Sanitary Plumbing Fixtures in the Vera Cruz Market.

There is a fairly good market for plumbing supplies and fixtures in Vera Cruz. A good sanitary system and waterworks were installed in the city some time ago and consequently a demand was created for modern sanitary plumbing systems. Such demand has, however, been curtailed because no new building operations have been carried on for over a year. As soon as new construction work is contemplated, sales of plumbing supplies and fixtures will improve. (Consul John Q. Wood, Vera Cruz.)

Special Reports on File.

The following reports are on file in the Specialties Division and will be loaned for a short period to firms interested. In requesting reports the file number should be mentioned.

92281—The manufacture of buttons in Finland.
92799—The Rumanian market for cartridges and shotgun shells.
83341—China and glass ware in Tacna and Arica.
91332—The Swiss watch and clock industry.

Cable review, Latin America: Belgium strong in the Brazilian hardware market.

COAL

BRITISH TRADE IN BUNKERING FUELS.

Trade Commissioner Alexander V. Dye, London, May 4.

Loading of Bunker Coal in British Ports Not Increasing as Rapidly as General Trade Movements. Increasing Use of Oil as Bunker Fuel.

During the first quarter of 1923 bunker coal furnished in the ports of the United Kingdom amounted to 4,568,320 tons, as compared with 4,403,262 tons for the same period in 1922. This slight increase in bunker coal is in marked contrast with the very great increase in the shipment of coal as exports from the United Kingdom during the period (see COMMERCE REPORTS for May 28, 1923). The principal reasons attributed for the failure to increase the amount of bunker coal furnished at United Kingdom ports are: Congestion at the docks resulting in a long delay in loading, the rise in prices of British coal, and the increasing use of oil as fuel.

The congestion at the docks is due to the fact that in pre-war times dock laborers and trimmers worked three shifts, whereas at the South Wales ports at the present time two shifts of eight hours each are worked. There has been a struggle of long duration between the labor unions and the dock owners, the position of labor being that increased mechanical appliances should be put in to enable more coal to be loaded, whereas the contention of the dock owners is that such increase in mechanical equipment is impossible at the present time, and that labor should agree to work three shifts. No statistics are available as to the amount of time it takes to load ships with coal on an average in United Kingdom ports, but that the delay is serious is shown by statements of shipowners which have appeared in print, in which they intimate that in some cases boats have been able to proceed across the Atlantic, load cargoes of coal at American ports, and return and discharge in European ports before others were able to get loaded at South Wales ports.

Owing to the rise in prices in the United Kingdom, coal costs less in American ports than it does in European ports generally. Best Yorkshire hards in Liverpool have risen from 31s. in February to 35s. in March, and in London Durham unscreened was 34s. 3d. in February and 39s. 6d. in March. At Antwerp the price of Belgian trimmed coal was 31s. 6d. in February and 40s. in March. In Naples the price of bunker coal increased from 40s. in February to 45s. in March. In New York, on the other hand, bunker coal was $7.75 in February and $7.25 in March.

Increasing Use of Oil as Bunker Fuel.

It is very difficult to draw any deductions in regard to the trend of trade from bunker fuel, because so many individual questions enter into each ship's voyage, but the conclusion seems to be that the loading of bunker coal in England is not increasing as rapidly as the general trade movements. Part of this tendency is due, undoubtedly, to increased use of oil as fuel. While the use of coal for bunkers shows scarcely any increase over last year, the use of oil fuel has more than doubled, bunker fuel oil taken on board at United Kingdom ports having amounted to 47,143,923 gallons in the first quarter of 1923 as against 23,296,152 gallons in the corresponding period of 1922. The amount of fuel oil for bunkering purposes was not segregated in British statistics before 1922, but the total fuel-oil bunkers furnished in 1922 amounted to 141,329,977 gallons.

There is a tendency in this country not only to increase the use of oil fuel, but particularly to go over to internal-combustion engines. On May 4 the price of fuel-oil bunkers at ports in the United Kingdom was as follows: Standard grade heavy furnace oil for burning under boilers, £3 10s. per ton in bulk ex oil wharf; standard grade Diesel oil for Diesel-engined ships, £4 5s. per ton in bulk ex oil wharf (the price of these two grades f. o. b. ex barge in dock is 2s. 6d. per ton extra); gas (or solar) oil for semi-Diesel-engined ships, 4½d. per imperial gallon ex wharf in bulk f. o. b. and 6¾d. per gallon ex wharf in barrels (barrels free), 3s. 6d. per barrel being allowed for returned empties in good condition. For quantities under 20 tons in bulk the price is 5d.

It is stated that at the present price of 70s. per ton, oil is still relatively cheaper than coal, when all incidental savings are considered, and with shipping rates at their present level. However, with Diesel oil only 15s. above furnace grade there seems to be an inducement to owners to adopt the internal-combustion engine.

Extension of Oil Installations at British Ports.

The establishment of the large fuel-oil refinery of the Anglo-Persian Oil Co. at Swansea has contributed to the expansion of the fuel-oil bunkering business in this country. The British Petroleum Co. (Ltd.) also proposes to construct two new tanks, thus bringing their installation up to nine tanks with a total storage capacity of nearly 5,000,000 gallons. A recent article in the London Times states that it is understood that an important firm of British owners and ship brokers, in conjunction with other firms, has been negotiating for the acquisition of property at Southampton with a view to the provision of oil storage and bunkering facilities for shipping using the port. At the annual meeting of the London & Thameshaven Oil Wharves (Ltd.) it was stated that they possessed the largest tankage capacity in the world for the public storage of oil, this capacity being over 158,000,000 gallons. This company does not deal in any of the commodities which it handles, as its business is simply that of receiving, storing, and delivering oil products for the general public. During the past year they landed considerably over 1,000,000 tons of oil products, and it was stated that their facilities were equal to handling two or three

times the quantity they had so far been called upon to deal with.

At the present time, therefore, the tendency in the United Kingdom seems to be toward a relative decrease in, or rather a failure to increase, the amount of coal bunkering, and a very large increase in the amount of fuel-oil bunkering. Practically all of this can be traced ultimately to the high cost of labor, although it is difficult in the case of liners to segregate the question of cleanliness and convenience with a saving of time from the question of labor costs.

THE NATAL COAL INDUSTRY, 1922.

Consul Lewis V. Boyle, Durban, Natal, South Africa, March 15.

The coal fields of Natal are located in the extreme northwestern section of the Province near the Transvaal border; most of the mines are situated on or near the main railway line from Durban. All coal produced is bituminous of fairly good quality, the best of it being about 5 per cent less in value in heating units than Welsh coal or American Pocahontas. The Natal mines produced and sold 3,222,981 long tons of coal, valued at $8,488,568, in 1922, as compared with 3,141,129 tons, valued at $11,898,047 in the preceding year. As shown by these figures the total production in 1922 increased by about 80,000 tons, while the value decreased by approximately $3,400,000. The decline in value was due to the fact that the price received per ton for coal at the pit's mouth was about 30 per cent less in 1922 than in 1921.

This industry suffered early in the year from the acute depression existing all over South Africa as a result of the strike in the gold mines at Johannesburg, and it was also affected by conditions in Europe. In May and June business began to improve somewhat and at the end of the year the industry was in a prosperous condition due to increased orders received from the west coast of India, Ceylon, Egypt, and the east coast of Africa.

Export Trade—Production of By-Products.

More than half the coal produced in Natal in 1921 and 1922 was exported either as cargo or as bunkers, the figures being in 1921, 1,851,644 long tons, and in 1922, 1,917,473 tons. There was exported in 1922 approximately 86,000 tons more of coal as cargo than in 1921, but shipments of bunker coal were less by about 20,000 tons in 1922 than in 1921. This small decrease in bunkers was due to the fact that many of the steamers coming from Great Britain in 1922 carried sufficient coal for their return voyage, and also to the reduced export business from Europe, thus making for fewer sailings of steamers.

The production of coke in Natal during the past year was 35,728 long tons, an increase of about 13,000 tons over the 1921 production, amounting to 22,817 tons. The amount of Natal coal converted into by-products during the past two years was only about 2 or 3 per cent of the total mined and sold. Coke is the only by-product manufactured to any great extent, although in 1922 the production of tar was undertaken by one of the large mines which had recently installed the Coppée process, its output amounting to 93,032 gallons in the last five months of the year. It is thought that in the future this mine will produce large quantities of coke, ammonia, and tar.

Additional information regarding coal appears in this issue under the following sections:

Cable review, Latin America:
Settlement of Chilean coal strike.
Brazilian coal stocks low.
Cable review, Far East: Lignite mined in Siam.
Western Europe: Czechoslovakia's coal and coke production.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

CONDENSED MILK INDUSTRIES IN EUROPE.

Alfred P. Dennis, special representative of Department of Commerce, Vienna.

Industry developing along normal lines since readjustment following war. Trade in American product fairly well maintained in France. The Netherlands leads all other European countries in production.

The war afforded an immense stimulus to the European canned-milk industry. The keen demand of the allied armies for concentrated, portable foods drove prices to extremely high levels. Scores of condenseries sprang up like mushrooms in the countries where dairy farming had been carried on with success.

Sporadic Industries—Unloading of War Stocks.

The deflation of 1921 brought ruin to a great number of these enterprises, which were automatically put out of business by severe price declines. October, 1921, was the turning point in the concentrated-milk trade. Local production had continued unabated up to this date, with heavy supplies flowing in from abroad. When the market became fully saturated both manufacturers and importers suffered severe losses.

While the demoralization was principally due to an oversaturated market, there is no doubt that concentrated milk temporarily lost some of its popularity through the unloading of stocks bought from the allied armies. Complaint was made that some of these stocks had been kept overlong and that deterioration both in quality and flavor had taken place.

Development of the Industry After Readjustment.

Since the violent readjustment of the autumn of 1921 the business in general has tended to develop along more healthy lines. There has been a continuous expansion of production in the Netherlands, Denmark, and Norway, a more or less stationary condition in Switzerland and Germany, and a sharp decline in France and Italy. No general statement can be made as to the fac-

tors which have controlled the industry in these different countries. Two points, however, should be noted: First, in the north European countries where the industry has prospered since the war the business has been long established, and particular markets are catered to, as, for example, the trade in sweetened skimmed milk supplied to British coal miners; second, in the countries where the industry is successful, it is an all-year-round business. In Denmark, for instance, the dairy industry depends chiefly upon arable farming and imported grain rather than upon a short and uncertain pasturage season. Furthermore, these countries as neutrals were less upset by the economic reflexes of the war.

In Switzerland, while the industry has been long established, business has been adversely affected by expensive labor incident to the high exchange value of the Swiss franc. In Italy and France the industry found itself without solid foundation after the collapse of boom prices. Pre-war production in Italy was only 240 metric tons. By 1918 this had jumped to 5,000 metric tons, and in 1922 it had dropped to less than 1,000 metric tons. In France production in 1922 was little more than half the 1920 outturn.

Foreign Brands Popular in France.

While production in France has steadily fallen, demand is certainly greater than before the war. At that time concentrated milks were almost unknown in French homes, the limited demand coming chiefly from the hotel and steamship trade. The war forced France to supplement its fresh-milk supply with heavy purchases of canned milks from Switzerland and the United States, thus popularizing foreign brands. The American trade is fairly maintained, despite the preferential tariff in favor of Swiss milks. The strong competitive position of American brands may be attributed to the relative cheapness of the raw milk, sugar, and tins, and the economies effected through large-scale production.

In the matter of imported milk, the sweetened brands have practically held the same ground for the past three years. The big drop has come in unsweetened brands. Imports of the latter during the first 11 months of 1922 amounted to 91,512 quintals as compared with 301,079 quintals during the corresponding period of 1920.

European Factories and Output.

European factories generally produce both sweetened and unsweetened milk, following the demands of the market. Three Italian factories specialize in unsweetened brands, while the remaining two concentrate on sweetened condensed milk. Of the total Swiss production, 85 per cent is sweetened, 10 per cent unsweetened, and 5 per cent sterilized natural milk. With the exception of two factories in Switzerland and three in Denmark, the evaporated-milk business is unimportant.

For the five countries for which comparable figures are available, the combined output was 81,320 metric tons in 1920, 112,505 metric tons in 1921, and 105,400 metric tons in 1922. These countries are France, Italy, Switzerland, Denmark, and the Netherlands. In these countries there are 73 factories in operation, and in Germany and Norway there are 31.

The following table shows number of factories and production by countries so far as reliable data are available.

Production of canned milk in Europe, 1920–1922.

Countries.	Total production.			Number of factories.
	1920	1921	1922	
	Metric tons.	*Metric tons.*	*Metric tons.*	
Netherlands	35,500	65,500	65,500	31
Denmark	14,980	18,055	[1] 20,000	17
Switzerland	21,000	21,400	[2] 14,780	15
France [1]	7,390	6,330	4,220	5
Italy	2,450	[1] 1,220	[1] 900	5

[1] Estimated.
[2] Export figures first 9 months 1922.
[3] No statistics available.

Seasons of Greatest Production.

In France, Germany, and the Netherlands the season of high production coincides with the grazing months of the year, beginning about May 1 and ending about October 1. In Denmark and Norway production is fairly constant throughout the year. In Switzerland peak production is attained late in May; however, the quality of the raw milk at this time is not as good as in the early autumn, when pasturage has been supplemented by grain feeding.

Containers Used by European Factories.

No tins of special sizes are made for the export trade in any of the European countries named, the cans for local trade being used for both purposes. In France and Denmark unsweetened milk is packed in 12-ounce tins, sweetened milk in 14-ounce tins, and the small output of evaporated milk is packed in 16-ounce tins. In Germany tins for both sweetened and unsweetened milk vary between 14 and 16 ounces, and the evaporated milk is generally packed in casks of 50 kilos. In Switzerland both types of condensed milk are packed in cans of 1 pound or ½ pound, and in Italy in cans of 1 kilo and ½ kilo. Dutch milk of both types is packed in tins of about 18 ounces. In Norway both types of condensed milk are packed in 16-ounce tins and evaporated milk in 9-ounce tins.

In all these countries shipments for export are packed in cases of 48 cans. In Norway, in addition to this uniform packing, cases containing 96 cans of 8 ounces each are used for the export trade.

THE EGG TRADE OF EGYPT.

Consul S. Bertrand Jacobson, Alexandria.

Egg production in Egypt is approximately 150,000,000 cases per year, according to reliable unofficial estimates. Each case contains 1,440 eggs. About 70 per cent of this production is exported.

For commercial purposes Egyptian eggs are divided into three classes. Fayoum eggs, produced in the fertile Province of Fayoum, southwest of Cairo, constitute the first class. Because of their relatively large

size they sell at higher prices than any other eggs. Beheri, or Delta, eggs, produced in the triangular area between the two branches of the Nile below Cairo, constitute the second class. The third and lowest-priced class consists of Saidi, or Upper Egypt, eggs.

Egyptian eggs are smaller than eggs produced in the United States, but the yolks are larger in comparison to the whites.

United Kingdom the Principal Buyer.

The principal purchaser of Egyptian eggs is the United Kingdom, which takes more than 90 per cent of Egypt's total exports of this commodity. The following table, compiled from official Egyptian customs statistics, shows the quantity, value, and destination of eggs exported from Egypt in 1921 and 1922.

Eggs exported from Egypt, 1921 and 1922.

Destination.	1921		1922	
	Number in thousands.	Value.[1]	Number in thousands.	Value.[1]
United Kingdom	87,980	$1,612,613	156,907	$2,491,219
British Mediterranean possessions.	229	4,399	72	959
France	1,699	28,685	2,881	46,356
Palestine	322	5,601	80	1,345
Spain	1,194	20,603	39	672
Syria	50	1,078		
Turkey	72	1,423	82	1,419
Other countries	275	4,760	191	2,624
Total	91,801	1,679,562	160,252	2,544,594

[1] Egyptian currency converted at $4.9431 per Egyptian pound.

Season of Heaviest Shipments.

Active shipments of eggs from Egypt begin in November and continue until July. Maximum shipments occur from January to April. Eggs are usually shipped by Alexandria produce exporters either on consignment or to agents on a commission basis.

The market at present is active and nearly all steamers sailing for the United Kingdom carry from 100 to 1,000 cases of eggs.

THE DAIRY INDUSTRY IN FINLAND.

Consul Leslie A. Davis, Helsingfors.

During 1922 the dairy industry in Finland continued to develop favorably. Fairly good crops in 1921 made large milk production possible during the winter and, although a late spring reduced production to some extent, the total for the year exceeded that of 1921.

Butter and Cheese Markets in 1922—Milk Production.

Great Britain was Finland's best customer for butter in 1922, taking 5,942,271 kilos, packed in tubs. Sweden was second, taking 1,055,087 kilos in tubs and 435,098 kilos in other packing. Denmark took 623,995 kilos in tubs and 6,804 kilos in other packing; Russia took 3,444 kilos, not packed in tubs; and exports to other countries were 267,086 kilos in tubs and 375 kilos in other packing.

During the year Germany took 1,263,295 kilos or about one-half of the cheese exported from Finland. Sweden took 384,332 kilos, Denmark 243,931 kilos, and other countries 233,929 kilos. Some new markets, included in the last amount, were developed in Czechoslovakia.

The establishment of new cooperative sales associations has caused a steady increase in the production of milk. At the same time old associations have increased their membership. While the milk production of 1922 was greater than that of 1921, the prices received were lower.

Exportation of Butter and Cheese.

The following table shows the quantity and value of butter and cheese exported from Finland in 1913, 1920, 1921, and 1922. In converting the values into American money, the Finnish mark was taken at par ($0.193) for 1913, at 30 marks to the dollar for 1920, at 50 marks to the dollar for 1921, and at 45 marks to the dollar for 1922.

Exports of butter and cheese from Finland, 1913 and 1920–1922.

Years.	Butter.		Cheese.	
	Kilos.	Value.	Kilos.	Value.
1913	12,640,000	$6,808,930	1,224,145	$472,643
1920	1,137,783	981,618	956,232	796,928
1921	6,465,154	5,908,885	2,125,487	1,265,769
1922	8,324,160	6,998,150	2,716,452	1,286,578

CONDITION OF THE SWISS CHEESE INDUSTRY.

Consul Thornwell Haynes, Berne.

The present output of Swiss cheese is smaller than the demand. Home consumption is satisfactory and demands from abroad are more than can be filled. Despite price reductions in the spring of 1922, both milk and cheese are said to be of better quality.

Production Approaching Pre-War Figure.

Annual pre-war production was approximately 70,000,000 kilos. While statistics for 1922 are not complete, the Swiss Farmers' Union estimates production at 60,000,000 kilos. Shortage of cattle feed reduced production during and after the war, but recently the number of milk cows has increased and a general upward trend has been evidenced during the last 18 months. It is expected, however, that this summer's production will be below normal.

Exports Recovering From Post-War Slump.

The Swiss Cheese Union at Berne bought from manufacturers about 30,000,000 kilos of cheese between August 1, 1921, and July 31, 1922. Of this amount, about 14,000,000 kilos, or 47 per cent, was exported. The percentage exported varies according to the condition of the world market. Swiss cheese exports for 1913, 1920, 1921, and 1922 are shown in the following table.

Exports of cheese from Switzerland.

Years.	Quantity.	Value.	Average price.
	Quintals.	*Francs.*	*Francs per quintal.*
1913	356,822	69,596,339	195
1920	12,095	7,411,672	613
1921	45,475	28,097,711	617
1922	264,033	66,647,060	383

United States an Important Buyer of Swiss Cheese.

Of the 35,000,000 kilos exported annually before the war, the United States took about one-fourth, France one-fifth, Germany one-sixth, and Italy and Austria-Hungary one-tenth each, other countries taking smaller quantities. Of the 204,003 quintals exported during 1922, the United States took 58,552 quintals, Germany 47.066 quintals, France 35,253 quintals, Italy 30,101 quintals, Czechoslovakia 4,533 quintals, Great Britain 3,410 quintals, and other countries smaller amounts.

Cheese Industry in Favorable Position.

Since 1916 the Swiss cheese industry has been under an efficient cooperative export organization. It has been asserted that this has enabled the industry to withstand recent depressions better than other industries have done. However, because of the quality of the product and the fact that no importation of raw materials is necessary, the industry is in a favorable position regardless of the cooperative organization. Uncertain feed crops and adverse economic and political conditions have not prevented steady progress toward complete recovery from war-time embarrassments.

Wheat and Flour in Hungary.

Consul Digby A. Willson, Budapest.

Hungary is primarily an agricultural and stock-raising country, with 4,200,000 of its 7,840,000 inhabitants engaged in agriculture. The production of cereals, as well as of live stock, is more than sufficient for the needs of the country.

Flour is one of the most important items in the export trade of Hungary. During the calendar year 1922, 160,923 metric tons of wheat and rye flour were exported, compared with 125,006 metric tons in 1921. Most of these exports go to contiguous countries. In 1922 exports of wheat flour were 115,047 and of rye flour 45,876 metric tons.

During 1922 imports of wheat into Hungary were 5,279 metric tons, or 2,255 metric tons more than the exports of wheat during the same time. Of the total imported, 1,723 metric tons came from the United States by way of Hamburg and Rotterdam. This was imported free of duty, to be milled in Hungary and reexported as flour.

While it is obvious that Hungary does not offer a market for American flour, there are possibilities in that country for the sale of American wheat.

Exports of Bananas from Panama.

Consul Julius D. Dreher, Colon.

Exports of bananas from the Colon-Cristobal district were resumed in 1919, after about 10 years of inactivity. During 1919 exports from this district were 8,392 bunches, valued at $2.897; in 1920, 22,426 bunches, valued at $10,880; in 1921, 95,000 bunches, valued at $48,485; in 1922, 98,672 bunches, valued at $44,687.

A company has recently been formed for the purpose of producing bananas on land adjacent to Gatun Lake. Banana culture in the Gatun Lake district may become an important industry. From 1878 until 1908 lands now covered by the lake produced from 50,000 to 100,000 bunches per month.

Most of the bananas exported from Panama are grown in the Province of Bocas del Toro. During 1922 exports to the United States through the port of Bocas del Toro amounted to 3,363,000 bunches, valued at $1,575,880. These bananas comprised about 64 per cent of all declared exports to the United States from Panama during that year.

Notes on Food Products.

American Flour in Mexico.

The annual consumption of wheat flour in Mexico is estimated at 2,000,000 barrels. A large part of this total is distributed through Mexico City. During 1922 approximately 1,088,000 barrels of flour were manufactured by domestic mills from Mexican wheat and about 600,000 barrels from wheat imported from the United States. Flour imported from the United States amounted to 295,354 barrels. Very little is imported from other sources.

American flour is used principally for mixing with the softer Mexican flour. A medium grade hard wheat flour is preferred. Most of the American flour is sold through resident agents. (Vice Consul Ernest E. Evans, Mexico City.)

Salt Production in Poland.

Polish salt production was 295,403 metric tons in 1922, a decrease of 6,421 metric tons from the production of 1921. While most of this is consumed in Poland, small quantities are exported to Denmark and other countries bordering on the Baltic. (Consul General L. J. Keena, Warsaw.)

Nicaraguan Exporter Offers Sarsaparilla.

Nicaraguan Exporter Offers Sarsaparilla.

A Nicaraguan exporter desires to get in touch with large importers of sarsaparilla. Importers may get particulars by application to the Foodstuffs Division, Bureau of Foreign and Domestic Commerce.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Latin America:
Brazilian stocks of coffee and sugar.
Coffee and banana shipments from Mexico.
Shortage of sugar in Peru.
Heavy wheat crop anticipated in Argentina.
Cable review, Far East: Rice trade of Siam.
Western Europe: Czechoslovakian sugar statistics.
Latin America:
Decline in prices of Colombian coffee.
Honduras sugar, banana, and coffee crops.
Tariffs and trade regulations:
Various Finnish tariff changes on sugar, cereals, and tobacco.
Reduced export duties on cereals in Yugoslavia.
Increased duty on canned milk and sirup in South Africa.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Canton Silk Exports to United States Increase.

Declared exports of raw silk from Canton to the United States in 1922 were valued at $39,289,457, compared with $29,293,203 in 1921. Exports of silk goods totaled only $14,046, compared with $8,283 in 1921. (Consul R. P. Tenney, Canton, China.)

Prices for Hemp Exported from the Florence District.

Current prices of hemp exported from the Florence district per 100 kilos (220.46 pounds), f. o. b. Bologna, are: Good quality, 480–500 lire; medium, 450–470 lire; ordinary, 380–400 lire; poor, 240–260 lire. The present value of the lira is $0.0483. Consul W. Roderick Dorsey, Florence, Italy, April 24.)

Italian Cotton-Goods Exports to Eritrea and Somaliland.

The export of Italian cotton goods to Eritrea and Italian Somaliland, in which there was an important pre-war trade, has almost ceased, despite the direct transportation facilities between Italy and these colonies. Italian products are being replaced by cotton goods from India and America. (Consul H. Earle Russell, Rome.)

Chinese Pig Bristles High.

As a result of competitive purchases by seven Japanese firms in China, Chinese pig bristles are ruling at very high quotations in spite of large export stocks in that country. The price of refined pig bristles has not advanced at all, but Japanese market stocks are exhausted. (Trade Commissioner Halleck A. Butts, Tokyo, Japan, April 18.)

Polish Textile Prices High.

Polish prices in many cases have risen to levels higher than world-market values, and, as a result, English, Czecho-Slovak, and Austrian ready-made clothing is appearing on the Polish market. It is also reported that Persian carpets are being shipped to Warsaw from London and Paris, because prices here are higher. Polish furs, sent to Paris for sale, are being returned to Warsaw on account of the present price advantage. (Acting Commercial Attaché H. B. Smith, Warsaw, April 26.)

Harbin Fur Exporters Preparing for Buying Campaign.

During the latter part of March dark squirrel furs increased in price in Harbin. There is no apparent reason for this rise. Fur exporters were preparing for a buying campaign in Zabaikal and Siberia, where there are available stocks of low-priced furs, but where only small quantities of sable, ermine, and Arctic and other valuable fox furs are available. (Consul G. C. Hanson, Harbin, China, April 5.)

New Danish Belting Advantageous for Outdoor Use.

A new belting recently invented in Denmark is said to possess many advantages over the ordinary belting now used. It is manufactured from flax instead of cotton and is impregnated with certain chemicals which make it especially resistive to water, acids, etc., thus permitting its use outdors in all kinds of weather. (Assistant Trade Commissioner H. Sorensen, Copenhagen, April 26.)

Chilean Hemp Industry Recorded Gain in 1921.

In 1921 the area in Chile devoted to hemp covered 4,603 acres and the yield of fiber amounted to 1,829 metric tons. These figures compare with 3,277 acres and 1,457 tons in 1920. Chile exports some hemp fiber, chiefly to Argentina, which in 1921 took 200 of the 227 metric tons exported from Chile. Los Andes, located in the Province of Aconcagua, is the center of the rope and twine industry, which utilizes the local hemp fiber. (Consul S. Reid Thompson, Concepcion.)

Kapok Industry of the Dutch East Indies.

The exports of kapok from the Dutch East Indies in 1922 amounted to 15,128 tons, of which 7,906 tons were destined for the United States. The price of kapok is now about 30 cents per pound, due to shortage of the supply which is obtained from uncultivated isolated trees on native holdings. It is estimated that kapok could be produced on a large scale at a cost of about 6 cents per pound, and lower prices would increase greatly its commercial consumption. (Consul Parker W. Buhrman, Soerabaya, Java.)

Substitute for Chinchilla Fur.

Real chinchilla fur is becoming difficult to obtain because the Peruvian Government has prohibited the killing of chinchillas for a certain number of years. A variety of rabbit, whose fur curiously resembles the chinchilla, is at present being bred in France. American buyers have been purchasing these raw fur skins in Paris through an intermediary, but a group of some 200 breeders are anxious to deal directly with American buyers, believing that both parties would benefit by such an arrangement. (Commercial Attaché Chester Lloyd Jones, Paris, April 24.)

French Interested in Greek Sericulture.

A French company has requested the Greek Government to grant to it the exclusive right to produce cocoons in Greece under certain fixed conditions. The Government is examining the offer and is reported to have decided to accept it, provided that the cocoons produced by the French company shall prove to be of a superior quality to those at present produced in Greece. (C. E. Dickerson, jr., clerk to trade commissioner, Athens, March 31.)

Wool Exports from Cirenaica and Tripolitania.

The wool of Cirenaica received favorable notice at the Colonial Exposition held in Padua in June, 1922, on account of the great resistance, thickness, and length of its fiber. Excellent results are reported by Tuscan mills using it in the manufacture of bed blankets. Cirenaica's exports of wool in 1922 amounted to 400,485 kilos of unwashed and 326 kilos of washed wool. In all, 74,267 kilos of unwashed and 20,838 kilos of washed wool were shipped from Tripolitania in 1922. Italy is still the principal buyer of these wools, but important quantities were also sent to Tunisia, Egypt, France, Greece, and Malta. (Consul H. Earle Russell, Rome.)

SWEDEN'S DEVELOPMENT AS A HOSIERY MARKET.

Consul Walter H. Sholes, Goteborg, March 15.

Sweden's remarkable development as a hosiery market during recent years is indicated by the trade returns for 1921—the latest year for which statistics are available. These returns show that Swedish hosiery imports in 1921 amounted to no less than 433,742 kilos, valued at $3,011,093, as compared with only 157,335 kilos, valued at $655,300, in 1913, which was a so-called normal year.

The amount of imports of hosiery from the United States also has increased considerably during the last few years. Formerly Swedish imports of cotton and silk hosiery from this country were of such small proportions that as late as 1913 the United States was in the "other countries" class. By 1921, however, American hosiery exports had reached a total value of $177,000. Additional amounts, which ultimately reached Sweden via Denmark, brought this total up to at least $250,000.

As might be expected, Germany has been particularly successful in its exports of silk and wool goods to this market, furnishing in 1921 approximately half of all of the hosiery imported. It seems doubtful, however, whether Germany will be able to maintain its prominent position in this market, as its hosiery exports to Sweden have suffered a severe slump in recent months.

Swedish imports of hosiery during 1913 and 1921 are given in the following table:

Swedish imports of hosiery.

Countries of origin.	1913		1921	
	Kilos.	Value.	Kilos.	Value.
SILK HOSIERY.				
Germany	5,555	$120,000	39,598	$791,960
Great Britain	2,344	50,000	4,156	83,120
United States			1,982	39,640
France	1,429	30,700	1,444	28,880
Switzerland			4,132	82,640
Denmark	661	14,000	5,112	102,240
Other countries	209	4,500	511	10,220
Total	10,198	219,200	56,935	1,138,700
WOOL HOSIERY.				
Great Britain	54,167	172,500	126,087	693,478
Germany	18,989	61,500	72,549	399,020
United States			1,909	10,499
Denmark	1,881	6,000	13,965	76,807
Norway			1,310	7,205
Other countries	250	960	1,255	6,903
Total	75,287	240,900	217,075	1,193,912
COTTON HOSIERY.				
United States			29,984	127,432
Germany	69,024	185,000	95,457	405,693
Denmark	1,984	5,300	31,387	133,395
Great Britain	1,244	3,300	2,113	8,980
Other countries	598	1,600	791	3,361
Total	71,850	195,200	159,732	678,861

No comparable figures for 1922 are available, the Swedish classification of hosiery in the monthly reports including gloves, underwear, and various other articles. The items comprising these totals are given for 1921 to afford an approximate idea of the share of stockings and socks in the totals for that year, and these are included with the totals for 1922 as follows:

Swedish imports of knit goods.

Items.	Silk.		Wool.		Cotton.	
	1921	1922	1921	1922	1921	1922
Knit goods (hosiery):	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*
Stockings and socks	[1] 56,935	.....	217,075	.....	159,732	.....
Gloves	2,751	.....	3,210	.....	40,431	.....
Underwear	.....	.....	9,533	.....	72,520	.....
Other articles	42	.....	91,384	.....	30,122	.....
Total	59,728	41,975	321,202	448,543	302,805	478,836

[1] This figure may include some underwear, and other knit goods of silk.

Sweden a Growing Market for Silk Hosiery.

By far the most interesting feature of the development of the Swedish hosiery market has been the growth of the demand for silk hosiery. Sweden, because of its cold and damp climate in the past, has not been a good market for silk stockings. Silk hosiery, however, now occupies probably the principal place in Swedish hosiery imports. The 1921 silk-stocking values constituted more than a third of the total, and the 1922 figures are expected to exceed those of wool hosiery. American silk-hosiery manufacturers, therefore, may look to Sweden as an ever-widening market.

The Swedish textile industry at first was somewhat slow in appreciating the possibilities of the domestic market for silk stockings, and not until three or four years ago were serious efforts made to compete with the English, German, and American products. Now, however, aided by a high customs duty of 30 crowns ($8.04) per kilo, which means about $4 a dozen for imported goods, the Swedish manufacturers are able to compete successfully in this important article of commerce.

Retail prices for men's silk hosiery range between 4 and 12 crowns ($1.07 to $3.20) a pair; for men's cotton hosiery, between 0.60 and 2 crowns ($0.16 to $0.55); and for men's woolen hosiery, between 1 and 5 crowns ($0.27 to $1.35). Retail prices for women's silk hosiery range between 7 and 25 crowns ($1.87 to $6.65) a pair; women's cotton hosiery between 0.70 and 2.50 crowns ($0.19 to $0.67); and women's woolen hosiery between 1.50 and 7.50 crowns ($0.40 to $2).

Demand for Woolen and Cotton Hosiery.

Most of the wool hosiery found on this market is of domestic or English manufacture, although cheaper qualities are imported from Germany and Czechoslovakia.

Cotton hosiery in Sweden is largely supplied by the domestic industry. Only mercerized cotton hosiery and thin fancy qualities are being imported (mostly from Germany and Czechoslovakia), although Great Britain also exports some of the better qualities of women's mercerized hosiery. Men's mercerized cotton hosiery has no noteworthy market in Sweden.

Plain-colored hosiery is particularly in demand, and the bulk of the trade consists of black, brown, blue, and gray.

Credit Terms of Interest to Prospective American Exporters.

Prospective American exporters should be apprised of credit terms governing the hosiery trade. German, English, and Swedish manufacturers, for instance, usually grant wholesale dealers of good repute 30 days' credit with 2½ per cent discount, and one-month datings are customary. English manufacturers generally sell only to wholesale houses and in sterling currency.

Swedish and German manufacturers, however, sell to both wholesale and retail houses in Swedish crowns, granting wholesalers special discounts, varying between 12 and 20 per cent. As a rule, however, business between domestic and foreign manufacturers and retailers passes through wholesale merchants via commission agents. The Swedish wholesalers generally have to grant the retailers six-month or even longer credits. Commission merchants usually receive from the manufacturers 2½ to 5 per cent as commission on sales.

Raw Furs in Constantinople.

Consul General G. Bie Ravndal, Constantinople, April 14.

Constantinople constitutes an intermediate point of transshipment for many kinds and grades of Russian and Anatolian raw furs. Of these a considerable percentage is consigned to American and English markets, although before the war France and Germany took about 80 per cent of the raw furs exported. It is estimated now, however, that America is the destination for more than 50 per cent, while part of the English consignments are reexported from London to the United States. France is still an important factor in the business, and Germany also figures in the market.

The principal furs shipped through Constantinople are fox (gray, red, black, and very rarely silver), wolf, jackal, skunk, stone marten, baum marten, squirrel, hare, and wildcat, American demands being mostly for fox, marten, and skunk.

The raw furs usually are shipped in bales bound by jute bags or coarse cloth coverings, with from 12 to 18 pieces in a bale. For large consignments wooden cases containing 250 pieces are used. All furs arrive and are shipped uncured in the raw, sundried state. They are kept in a dry place with naphthalene and salt to prevent rotting and moth eating, and are handled in Constantinople by specialists in the fur-dealing trade. In shipment there is no export duty, nor is there any sanitary tax, because the furs are transferred in transit or held in the original containers for export.

Current Fur Prices.

Current prices, obtained from a reputable fur dealer, are quoted as follows: Good quality red fox, $11.56 to $12.24 per pair; ordinary fox, $7.48 to $8.84 per pair; wildcat, $1.70 to $2.04 per pair; skunk, $20.40 to $40.80 per pair; jackal, $2.38 to $2.72 per pair, with 10 per cent discount; wolf, $9.52 to $10.20 per pair; hare, $27.20 per 100 pieces, with 5 per cent reduction; stone marten, $22.44 to $24.48 per pair; baum marten, $25.16 to $25.84 per pair; squirrel, $0.68 to $1.02 per skin; and badger, $2.72 per skin. The price of black and silver fox skins depends on the quality of the fur. These prices are variable and are subject to change. They are figured on the basis of the Turkish pound being equal to $0.68.

Exports of Furs from Constantinople.

It is estimated that 20,000 fox, 50,000 hare, 5,000 stone marten, 2,000 jackal, and a miscellaneous supply of wildcat, otter, wolf, and squirrel skins are at present in bonded warehouses or in shops available for export.

Consular returns show the exports of furs from Constantinople to the United States to have been 128,919 pieces, valued at $202,048, in 1921, and 186,763 pieces, worth $405,271, in 1922. For the first quarter of 1923 the value of the declared exports of furs to the United States is given as $203,094.

[Additional information regarding the market for raw furs in Constantinople may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, by referring to file No. 92200.]

Hair-Net Industry of Chefoo, China.

Consul Stuart K. Lupton, Chefoo.

The United States retained its position as chief buyer of hair nets shipped from Chefoo during 1922, although a decrease was noted in its purchases compared to the previous year. During the first four months of the year considerable quantities of single-cap nets were bought on a steadily falling market, but it is believed that these were largely to fulfill contracts made some time before. The demand for single nets ceased entirely by the middle of the year 1922 and prices fell below production costs. In the meantime the American market was glutted with singles. These were not selling as anticipated, because of unsatisfactory condition and also on account of the greater durability of the double net, which is said to stand four times as much use as the single. The flooding of the market for single nets in the United States resulted in quotations being made there to European buyers at less than cost, thus forcing the price in China to a still lower level.

The greater proportion of the nets exported were, consequently, the double cap, largely 10/38, although minor quantities of 6/38 and 12/38 nets were invoiced. In the early spring 10/38 doubles, assorted colors, went as high as 7.50 Mexican dollars per gross, declining later to 3.30 Mexican dollars, and settling down toward the end of the year at 3.80 to 4.

The hair-net business in the Chefoo district was believed to be in much better financial condition at the end of 1922 than at the end of the previous year. Better nets are being manufactured and examinations and repairs are said to be more satisfactory.

Declared exports of nets from Chefoo to the United States amounted to 1,767,914 gross, valued at $4,519,359, in 1921, and 1,250,994 gross, worth $3,319,322 in 1922, as compared with only 219 gross, worth $719 in 1914—the first year of the industry.

The Near East as a Source of Raw Silk.

Consul General G. Bie Rayndal, Constantinople, April 20.

The enormous expansion of the American silk industry has rendered the extension of the field of raw-silk production imperative, according to the report of the secretary of the Silk Association of America, submitted at its recent fifty-first annual meeting. The possibility of developing in the Near East a market from which the United States might draw a large supply of suitable raw silk is submitted as worthy of the serious consideration of American silk manufacturers. Greece, Turkey, Syria, the Caucasus, Persia, and Turkestan are believed to be capable of extraordinary development as sources of raw silk. Heretofore American silk importers have refrained from direct dealings with these regions, preferring to buy limited quantities of Levant silk at Milan, Zurich, and Lyon.

In view of the success which has attended the efforts of American cigarette manufacturers in developing and utilizing for their needs the Macedonian and Turkish tobacco industry, it would seem quite prac-

ticable for our silk manufacturers to derive similar advantages from a sustained effort to revive and foster sericulture in the Near East.

The potentialities of the expansion of the industry are apparent from the fact that the production of the Levant and central Asia in the period between 1909 and 1913, when the demand for raw silk was very much weaker and the price lower, amounted to 6,186,000 pounds annually, but it has since decreased to 1,764,000 pounds in 1919 and 1,654,000 in 1920, in spite of stronger demands and higher prices. This curtailed production was caused by the general insecurity, shortage of labor, due to conscription and deportations, destruction of nurseries and spinneries, and mutilation of mulberry trees.

Greek Market for Ready-made Clothing.

Acting Commercial Attaché R. O. Hall, Athens.

Cheapness of labor and low prices, due in part to the enormous overstocking in 1919 and 1920, when the drachma was near par, have caused the market for American ready-made clothing in Greece to fall off considerably. Almost all of the suits of good quality are tailored to order, and a suit of the best quality of cloth, made by the most fashionable tailor, costs no more than 3,000 drachmas, or at the present rate of exchange, about $33. Even dress suits are to be had at this price, while the average tailored suit of very good quality costs about 1,800 drachmas, or about $20. Last winter tailor-made overcoats sold for 1,800 drachmas, and ready-made overcoats for 1,000 to 1,200 drachmas. In fact, in no case does it cost more than 800 to 1,000 drachmas to have an excellent suit tailored from cloth furnished. Under the existing exchange conditions local tailors can easily compete with American ready-made clothing. Keen competition from the low-exchange European countries, coupled with the low standard of living, has also caused a decreased demand for American neckwear.

Chilean Market for Rope and Cordage.

R. H. Squirrell, secretary to commercial attaché, Santiago.

Practically all of the rope and cordage used in Chile up to 1920 was imported from the United Kingdom, although during that year the United States supplied 38,592 gross kilos (1 kilo=2.2046 pounds) of hemp rope, valued at 50,712 pesos (1 peso=36 cents), of the total of 101,747 kilos, valued at 145,893 pesos, imported. Of the 420,638 gross kilos of manila rope, with a value of 583,825 pesos, imported during the same year, the United States supplied 88,812 kilos, valued at 122,939 pesos.

During 1921 Chilean imports of hemp rope amounted to 39,095 kilos, of which 5,076 went to the United States, the total value being 56,898 pesos, and the share of the United States, 8,296 pesos. The imports of manila rope for 1921 from the United States amounted to 44,803 kilos, having a value of 77,960 pesos, the total imports of this product being 384,693 kilos and the value 570,243 pesos.

The manufacture of hemp rope and cordage was started in Chile in 1920 and, considering the short space of time that Chilean rope has been on the market, the product is very satisfactory. Native hemp is used exclusively, although this material is not of the best grade. Chilean manufacturers are now considering the importation of Italian hemp, with a view to improving the quality of their product.

As indicated by the above figures, however, the consumption of hemp products is relatively unimportant, compared with the requirements of manila rope, which is used to a considerable extent in the mining industry, and also in the nitrate fields.

The decline in the rope imports in 1921 was due principally to the general industrial depression which existed in Chile during that year, purchases having been curtailed as much as possible in all lines of industry, but as economic conditions are now improving and Chile is still importing practically all of its manila products this field should be worthy of the serious consideration of American manufacturers of rope and cordage.

[Additional information regarding the Chilean market for rope and cordage can be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Reference No. 8044.]

The Silk Industry in Valencia, Spain.

Consul Robert Harnden, Valencia.

An intelligent and systematic campaign to revive silk culture in Valencia has been conducted recently. The result has been the planting of some 65,000 mulberry trees on 200 farms with about 1,000 individuals actively engaged in reviving silk culture in this district. The Government encourages sericulture by offering a premium of 50 centimos (normally 10 cents) per kilo of cocoons. The worms producing these cocoons, before being sold, must first be examined for disease and registered by a local branch of the Department of Agriculture, the containers of the worms being stamped and sealed by the authorities.

Damasks and Brocades the Principal Output.

There are at present in Valencia some 400 looms for the weaving of various silk fabrics, such as damasks and brocades. These looms are operated by hand and all are modeled on the old ones used centuries ago. They vary in width from 1 to 3 meters (1 meter=39.37 inches). Most of the operatives are men highly trained in their work, although they are only paid from 30 to 35 pesetas (normally $6 to $7) a week.

The patterns used in the manufacture of damask and brocaded silks are almost entirely copies of designs from the seventeenth and eighteenth century. So cleverly are they copied that it is frequently impossible for the layman to distinguish between the old and the new. Many are in gold or silver thread. The dyeing is done in Valencia, generally by German dyers imported for the purpose.

These brocades and damasks range in price from 25 pesetas ($5) to several hundred pesetas per meter, depending on the design, colors used, and width. They possess considerable artistic as well as economic value. Comparatively little artificial silk is used in Valencia at present and the local manufacturers are doing their best to regain their reputation for silks of the highest grades.

[A list of the principal silk factories in Valencia may be obtained from the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or the Textile Division at Washington by referring to file C. I.—66.]

"Kilim" Carpet Industry of Poland.

Consul L. J. Keena, Warsaw.

The "kilim" is a handmade carpet of wool on a ground or foundation of flax or hemp instead of cotton. This feature, it is claimed, adds very greatly to its durability.

The patterns may be generally divided into two categories—those with geometrical figures, used for carpets, and those with designs of flowers and animals, for wall decorations. The carpets are made in the usual sizes, and as large as 12 by 20 feet. For richness of color and quality of weaving, the Polish "kilims" of the better grades can be compared favorably with Persian carpets, and also have the advantage of being less expensive.

The present yearly output is approximately 80,000 square meters (1 square meter=1.195 square yards). This amount is produced on approximately 3,000 looms, and fully 75 per cent of it in homes by weavers who have learned the art from their ancestors. The largest workshop has only 20 to 30 looms.

Prior to the World War the surplus production was marketed in Vienna, but since 1920 small quantities have been exported to England, France, Belgium, Italy, and Switzerland. It is claimed that the present production could be increased by 400 or 500 per cent in the course of a year. The producers have no central selling organization, but sell their products in small quantities as they are finished. Producing centers are reached easily from Warsaw.

Market for Corsets in Cuba.

Consular Clerk Harriet Williams, Habana, April 3.

Cuba presents a good market not only for the sale of ready-made corsets, girdles, and brassieres, but also for the materials entering into their manufacture. This is due to the fact that the Cuban women follow French and American styles in dress, as well as to their general preference for well-designed corsets and like garments.

After careful investigation, it has been found that about the same quantities of corsets are imported, principally from the United States, as are manufactured locally. A few elastic-webbing girdles come from France. The most popular corset in Cuba is of the long type, made low-topped. Washable material is preferred, and the stays should be nonrustable. Front-laced corsets are considered to be well favored. The corsets manufactured locally are of practically the same styles as the American-made product.

Habana has one rather large factory engaged in the manufacture of corsets, girdles, and brassieres. In addition, there are several smaller establishments making high-priced garments to order. This large factory is run according to modern methods, employing about 100 people, and compares favorably with those of its size in the United States. All styles of corsets are made, ranging in price from $10.95 to $65 per dozen wholesale. Retail prices are about double, except in the case of the cheaper grades, where the ratio is smaller. The materials used are white and pink cotton coutil, cotton brocaded in silk, and silk brocade, depending upon the price. Sizes generally range from 22 to 36 but some models run from 22 to 32, and others from 24 to 32 or 36.

The girdles made by this particular Habana factory sell at from $12.25 to $45 per dozen wholesale and are made from elastic webbing, some of which is imported from Italy. Sizes are the same as for corsets, but girdles are considered to be more in demand than corsets. This company also manufactures a type of brassiere, known as "ajustador"—a garment said to enjoy great popularity. It is exclusively of Cuban origin and no garment of similar style is being imported. It is made of white or pink cotton netting, trimmed with lace edging, and is worn next to the flesh, in addition to the corset and perhaps American-style brassiere.

Materials Imported for Manufacturing Corsets in Cuba.

Although the Cuban manufacturers of corsets purchase the greater part of their supplies from the United States, the cotton netting used in the manufacture of the Cuban "ajustador" is of English origin, and a considerable quantity of the lace edging used for trimming the ajustador comes from England. Elastic used in the manufacture of girdles usually is imported from Europe. One variety is from Italy and another from France.

[A list of the principal corset manufacturers of Habana and samples of materials used may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, by referring to file No. 90348.]

Philippine Hemp Prices.

Trade Commissioner John A. Fowler, Manila, May 16.

The main feature of the Philippine hemp market for the month of April and the first part of May (May 1 to 15) was the fact that the price of hemp in Manila was higher than the New York or London quotations. Manila hemp prices in consuming markets began to decline during the first week of April, holding steady from then to April 12. Quotations on all grades declined from April 12 to April 17 and local dealers were holding off for higher prices. From April 17 to the end of the month United States grades recovered, but other grades continued to decline. The market opened for grade "I" at 18 pesos per picul, dropped to 17 pesos in the low period, and closed the month at 18.25 pesos, with an upward tendency. The quotation on May 15 was 18.75 pesos.

Unofficial but reliable trade figures show the year's receipts to May 15 as 563,000 bales and shipments amounting to 563,000 bales, stocks on hand of 155,000 bales standing level with stocks on hand on January 1.

The Coir-Fiber Industry of India.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta, April 10.

The Malabar coast of the Madras Presidency, including the native States of Cochin, Travancore, and the neighboring districts, forms the chief center of the Indian coir-fiber industry. Palm trees are abundant on both the east and west coasts of the peninsula, but the industry is confined to the west coast, as the soil there is more fertile, coconut trees more numerous, and the tidal waves prevalent on this coast act as a natural dyer and cleaner of the fiber.

Until recent years the extraction of the coir fiber was a cottage industry, employing women under the supervision of small Indian cultivators. Several European firms, however, have now established themselves

in the principal centers of the industry at Calicut, Tellicherry, Cochin, and Alleppey, with a view to securing control of the trade.

The exports of raw fiber are negligible but coir manufactures, not including rope, were exported during the year ended March 31, 1922, to the extent of 27,742 tons, having a total value of 9,157,127 rupees (the average value of the rupee in 1921 was $0.2575). The United Kingdom received the largest quantity, 8,601 tons, amounting to 3,194,295 rupees; Germany was second with 4,898 tons, valued at 1,350,959 rupees; the Netherlands third, taking 4,271 tons, amounting to 1,279,148 rupees; and the United States fourth, receiving 2,473 tons, with a value of 887,380 rupees.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Latin America:
- Little activity in Peruvian cotton market.
- Brazilian cotton stocks and market.
- Mexican imports of cotton goods.

Tariffs and trade regulations: Canadian customs decision on cotton yarns.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

BRAZILIAN IRON AND STEEL MARKETS.

Commercial Attaché W. L. Schurz, Rio de Janeiro, April 2.

The demand for iron and steel in Brazil has not been heavy. The business done by American companies, however, has been reduced by their refusal to take orders because mills at home are working to capacity on domestic supplies, and also by the increase in American prices. At present the Germans are virtually out of the market, but the Belgians continue active.

Statistics for February imports of iron and steel through Santos follow:

Imports of iron and steel into Santos, Brazil, in February, 1923.

Articles.	United States.	England.	Germany.	Belgium.	Netherlands.
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*
Bar and bar mill shapes	60	53	99	305	3
Galvanized and corrugated sheets	77	81	.....	.....	.....
Black sheets and plates	73	226	.....	79	117
Tin plate	57	479	.....	.....	99
Barbed wire and staples	259	.....	113	147	105
Galvanized and other wire	168	148	89	67	5
Nails	3	.....	.....	.....	.....
Iron and steel tacks	5	.....	1	1	.....
Wire rope	5	.....	1	1	.....
Steel tubes, including conduit tubes	91	38	6	11	43
Tubular steel poles	.....	.....	.....	120	.....
Rails and accessories	391	.....	.....	2,259	.....
Spikes	.....	141	.....	43	.....
Railroad-car material	.....	.....	.....	453	.....
Bolts, nuts, and nut locks	11	5	1	15	.....
Steel tires	17	.....	.....	.....	.....

Besides the imports enumerated, France supplied 2 tons of bar and bar-mill shapes, 82 tons of barbed wire and staples, and 6 tons of galvanized and other wire; Belgium sent 22 tons of ferromanganese; Sweden sent 1 ton of horseshoe nails and 10 tons of ferromanganese; Germany furnished 127 tons of beams and shapes 3 inches and larger; and England furnished 52 tons of hoops, 8 tons of wheels and axles, 65 tons of fabricated steel, and 39 tons of special steel.

Statements of imports into Sao Paulo during February showed an increase of 270 tons over January and an increase in shipments from the United States of about 14 per cent. Nevertheless, of the month's entries Europe shipped 82 per cent of the total, and even excluding the 2,711 tons of rails and railway material which Belgium shipped on the contract secured last year Europe handled 40 per cent more of the business than did the United States.

THE POLISH IRON INDUSTRY.

L. J. Cochrane, clerk to trade commissioner, Warsaw, March 28.

The Polish iron industry is entering upon a period of stagnation, due to conditions resulting from the overinflation of Polish currency, the upward reaction of price levels, and the increase in production costs. The Polish metal-manufacturing industry has been operating both for the domestic market and for export, primarily to the Baltic States. It is reported that present restricted operations are for previous orders and that new orders have declined considerably in volume.

Iron Prices in Poland.

Polish levels for low-grade iron and bar iron continue below levels in the United States. In the case of cast pig iron, however, present prices, as compared with prices on January 24, in Polish marks per kilo, f. o. b. foundry, show a marked reversal, quotations in Poland as of February 14 being 3.9 per cent lower, while on January 24 the Polish figure was 1.9 per cent higher than the United States quotation. Prices as taken from Przemysl i Handel for March 1, 1923, are:

Prices[1] of iron in Poland compared with prices in other countries.

Products.	Poland.	England.	France.	Czechoslovakia.	Germany.	Luxemburg.	United States.
	Marks.	*Marks.*	*Marks.*	*Marks.*	*Marks.*	*Marks.*	*Marks.*
Crude cast No. 1	1,134	1,015	860	1,250	1,330	675	1,180
Low-grade iron	1,340	1,020	1,890	1,520	2,870	1,135	1,820
Bar iron	1,650	.....	1,660	2,000	3,080	1,370	1,820

[1] Prices are quoted in Polish marks per kilo, f. o. b. foundry, duty free. The Warsaw exchange rate of Polish mark on February 14, 1923, was 25,500 to the dollar.

Polish Iron and Steel Production.

Polish blast furnaces in 1922 reached 19.4 per cent of their pre-war output. The steel plants turned out 29.4 per cent and the rolling mills 30.5 per cent of pre-war production. The output in metric tons of Polish blast furnaces, steel plants, and rolling mills for the years 1919 to 1922, compared with 1913, has been as follows:

Production of Polish blast furnaces, steel plants, and rolling mills.

Years.	Blast furnaces.		Steel plants.		Rolling mills.	
	Tons produced.	Per cent of 1913 output.	Tons produced.	Per cent of 1913 output.	Tons produced.	Per cent of 1913 output.
1913	418,416	.....	599,769	.....	465,639	.....
1919	15,214	3.64	15,214	2.94	17,586	3.07
1920	42,610	10.20	68,892	11.5	48,973	10.40
1921	60,443	14.40	118,032	19.70	92,654	19.80
1922	81,200	19.40	176,200	29.40	142,000	30.50

Coal Consumption of Polish Iron Industry Increased.

A comparison of statistics for 1913 and 1921 reveals a 58 per cent increase in the use of coal for iron production in Congress Poland, or from 1.55 tons in 1913 to 2.45 in 1921. Similar tabulations for Upper Silesia show an increase of 26 per cent, or from 1.14 tons in 1913 to 1.43 in 1921. At present the production of 1 ton of iron requires 1.02 tons, or 71 per cent more coal in Congress Poland than in Upper Silesia, and with prevailing high levels for coal in Congress Poland, the competitive advantage of the Polish Upper Silesian industry is a matter of serious concern. It may be noted that the 40 per cent tax on Polish Silesian coal entering Poland has recently been repealed in an effort to protect Polish non-Silesian metal industries.

The Situation at the Russian "Jugostal."

Abstracted by the Eastern European Division from Economic Life (Moscow), January 13 and 19, 1923. The Bureau assumes no responsibility for the accuracy of the information.

The production of the "Jugostal" (the southern steel trust of Russia) for the last quarter of 1922 is represented as follows:

Production of "Jugostal" during the last quarter of 1922.

Iron and steel.	October.	November.	December.
	Poods.[1]	*Poods.*[1]	*Poods.*[1]
Pig iron	466,000	513,000	497,000
Open-hearth steel	331,000	492,000	642,000
Rolled materials	303,000	498,000	663,000

[1] One long ton equals 62 poods.

The increase in the production of steel in December was followed by a sharp decrease in the early part of January, 1923, due to delayed payment of wages. November wages were paid in December only to the extent of 30 per cent of the amounts due.

American Steel Products in Demand in Chile.

Consul George A. Makinson, Valparaiso.

The occupation of the Ruhr has created a situation in the Chilean steel trade similar to that prevailing here during the war; that is, it has created a buyer's market in which American mills occupy the most advantageous position. Although American steel manufacturers have always done a fair business in this field, they have had to work hard for orders, as their prices have usually been somewhat higher than European quotations. To-day, however, they are meeting with little serious competition; in fact, they are booking all the Chilean orders that they are able to take care of. In some few lines, however, they are out of the market because of the unusually heavy domestic requirements in the United States.

From 1920 to the beginning of 1923 Germany was the chief purveyor of steel products for the Chilean market, but the French occupation of the Ruhr has caused its trade to slump badly in recent months. The material on hand six weeks ago was quoted in the local market for immediate shipment and payment. Since then there have been no further quotations from Germany on staple products, such as plates, shapes, bars, wire, and pipe. There is still, however, some competition on wire products from Belgium. This comes through British houses. British mills are also selling limited quantities of sheet and tin plate, but the trend of prices is decidedly upward, with the likelihood that these mills will go out of the Chilean market in the near future.

Iron Production of the Island of Elba.

Consul Leon Dominian, Rome, Italy.

The production of iron ore from the island of Elba amounted to 416,400 tons in 1922, as compared with 279,980 tons in 1921 and 389,966 tons in 1920. The bulk of the iron mines in the island are the property of the State, worked under a grant by the Elba Co., which was recently reorganized as a result of an extension of the period of its concession.

The annual report for 1922 of the Montecatini Co. states that the economic operation of these mines depends upon the extension of the grant for a long period of time in order to enable the grantees to build the plant required to extract the ore economically. It is claimed, moreover, that the island can produce larger quantities of iron ore if a demand exists in Italy.

Copper Production in Southern Africa.

News of the Messina mine resuming operations has been received with special interest in Rhodesia. The success of that mine (which is close to the Limpopo) affects the position of the line of railway, which, as so many Rhodesians hope, is destined at no very distant date to link Charterland more directly with the railways of the Union, states the South African Mining and Engineering Journal. The Messina Co. ceased operations about the end of 1921, on account of the low price obtaining for the metal, and also because of the requirements of the trade-unions at that time. The company is now able to turn out 300 tons of copper a month.

Deposits in Belgian Congo.

Next to the Witwatersrand, copper deposits in the Katanga Province of the Belgian Congo are considered the largest in Africa. The ore reserves, with copper at £70 per ton, are worth nearly £300,000,000, and with copper at its present price the Union Miniere must be earning very substantial profits. Last year the Union Miniere produced 43,408 tons of copper and was the leading producer of this metal in the world. This is the company's record output, production having commenced in 1911 with an output of 997 tons. The most important copper-mining areas in the Union are those of Namaqualand in the Cape Province, and the Messina in the Transvaal. Of recent years these mines have either been closed down altogether or else have been producing on a very small scale indeed.

Austrian Iron and Steel Output Increases.

Trade Commissioner William Ford Upson, Vienna, April 7.

The Austrian iron and steel statistics for the month of March, 1923, show an increase in production of 34,203 metric tons, or 77 per cent, over those of the preceding month. In addition, the amount of iron ore mined has increased 19,779 tons, or 23 per cent. These increases are attributed to the effect of the French occupation of the Ruhr region. Prices have remained unchanged, however, and unfilled orders are about the same as in February.

During the first week of April a strike broke out in the Styrian coal mines, which has caused the Alpine Montangesellschaft to bank all its blast furnaces and to curtail its operations, so that 40 per cent of its workmen are now out of employment. The official statistics of the Alpine Montangesellschaft, Austria's largest iron and steel company, for the first quarter of 1923 are as follows:

Production and unfilled orders of the Alpine Montangesellschaft.

Months of 1923.	Production.				Unfilled orders at end of month.	Furnaces in blast at end of month.
	Iron ore mined.	Pig iron.	Ingots.	Miscellaneous.		
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons*	*Metric tons.*	*Number.*
January	56,160	20,254	15,525	10,787	36,305	2
February	86,763	19,728	15,138	9,637	31,570	3
March	106,542	33,243	27,348	18,115	31,620	3

Chrome-Ore Production in Rhodesia.

Consul C. I. Pisar, Cape Town, South Africa.

A feature of mineral production in Rhodesia during the later months of the year 1922 has been the expansion of the chrome-ore industry. The total production of chrome ore in 1921 was 50,188 tons, and in 1922 94,475 tons. The highest production for any single month was in November, 1922, when 24,814 tons were mined.

For some years past Southern Rhodesia has been one of the principal chrome-ore producing countries in the world, and, as in the case of various other minerals, the demand occasioned by the European war resulted in a very marked increase in output. Between June, 1921, and May, 1922, the demand dropped to such an extent that practically all the mines in Rhodesia ceased producing. Since May, 1922, there has been a revival in the demand for chrome ore on a larger scale than ever.

Principal Producers of Rhodesian Chrome Ore.

The principal producers of chrome ore in Rhodesia are associated ventures styled the Rhodesian Chrome Mines (Ltd.) and the Rhodesian Metals Syndicate (Ltd.). These companies hold claims in other parts of Rhodesia than the Selukwe district, where the principal deposits are located, and such is the variety of their deposits that they are able to supply almost any grade, both hard and "fines." The deposits are very extensive and mining costs are comparatively low. The present price of Rhodesian chrome ore (50 per cent) is from £5 to £6 per ton.

Exportation of Scrap Iron from Chile Prohibited.

Consul George A. Makinson, Valparaiso, April 13.

The increasing scarcity of scrap iron in Europe, resulting from the occupation of the Ruhr, has led foreign speculators to buy up considerable quantities of Chilean scrap iron destined for oversea shipment. The result has been the recent prohibition of scrap-iron exports in Chile. (See "Tariffs and Trade Regulations" in this issue of COMMERCE REPORTS.) This law, applying to the exportation of scrap iron as well as scrap copper, lead, and zinc, originally was enacted in September, 1917, at the instance of local industrialists. After the armistice, when foreign sources of supply again became open to Chilean commerce, its provisions gradually were relaxed, so that during recent years limited quantities of old machinery, plates, and other suitable scrap material occasionally have been shipped out of the country.

The available supply is greater than either the population or manufacturing resources of the country would indicate, because of the fact that such material was not used in Chile until the outbreak of the European war. It is estimated by local authorities that it would be a simple matter to buy 100,000 tons in a very short time.

The bulk of the Chilean scrap is found in the yards of the State Railways, as well as in those of the privately owned lines. Much of this consists of wheels and axles that might profitably be turned down for reuse on roads requiring light-weight rolling stock. In addition to the railway scrap, a large quantity of old tank plates comes from the 200 nitrate plants in the northern Provinces, while old machinery comes from the coal mines and copper plants.

Between 1914 and 1916 three rerolling mills were established in Santiago. The State Railways own the largest plant, which is used to roll the bars needed for the Government lines. It is estimated that from 1916 to 1920 these three mills rolled between 20,000 and 25,000 tons of small bars, flats, rounds, and squares. In 1916, when the buying of scrap first commenced, the price was approximately $3 per ton. By 1919 the best scrap had advanced to between $15 and $20 per ton. The price has since slumped and is now $9 to $12. During the economic crisis of 1920 the local mills were obliged to suspend operations. Although the price of imported steel dropped, the local coal costs remained so high that the native output could not compete with the imported. Within the last 18 months all of the local mills have resumed operations, but only on a limited scale.

Mineral and Metal Items.

Yawata Iron and Steel Production.

The production of pig iron at the Yawata Iron Works of Japan during 1922 amounted to 413,180 tons, and at the Tobata Works, 52,397 tons—a total of 465,577 tons, according to the Fukuoka Nichi Nichi Shinbun. As compared with 1921, this is an increase of 58,000 tons. Steel production amounted to 410,000 tons and shows an increase of 50,000 tons compared with the 360,000 tons produced in 1921. The smelting furnaces at full capacity easily can produce 550,000 tons of pig iron a year. (Consul Henry B. Hitchcock, Nagasaki, Japan, April 11.)

German Iron and Steel Prices.

Guiding German inland prices of pig iron, effective May 1, are: Hematite, 744,000 marks per metric ton;

first-grade pig iron, 714,000 marks; third-grade pig iron, 711,000 marks; ferrosilicon, 10 per cent, 969,000 marks; spiegeleisen, 8 to 10 per cent manganese, 940,000 marks. Inland prices on Thomas steel half fabricates remain unchanged since April 11 (see COMMERCE REPORTS of April 30, page 287). Maximum inland prices on cement, effective May 5, are 1,710,128 marks per 10 tons, f. o. b. plant. (Cable form Commercial Attaché Charles E. Herring, Berlin, May 11.)

Scrap Metals Exported from Battle Fields of France.

The exportations of scrap metals collected on the battle fields and of old steel rails and other metal pieces used in France during the war continue through the port of Boulogne-sur-Mer. Statistics for 1922 show only an insignificant decrease in the tonnage as compared with 1921, the record year. England takes practically all of these exports. Figures obtained from the French customs authorities showing the exportation of scrap metals from Boulogne-sur-Mer in 1919 to 1922 are: Brass and copper scrap, 36 metric tons in 1919, 666 in 1920, 5,941 in 1921, and 2,951 in 1922; iron scrap, 66 metric tons in 1920, 1,693 in 1921, and 1,580 in 1922; steel scrap, 14,958 metric tons in 1920, 37,087 in 1921, and 34,569 in 1922. (Vice Consul William W. Corcoran, Boulogne-sur-Mer, April 16.)

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable Review, Latin America:
Ruhr situation prevents Germans filling contracts for steel products in Peru.
Brazilian iron and steel market.
Cable review, Far East: Tin exports from Straits Settlements.
Tariffs and trade regulations: Reduced German export tax on certain metals.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

OIL PRODUCTION IN RUSSIA.

Prepared by Eastern European Division on the basis of the soviet press.

Preliminary figures for the first quarter of 1923 (Economic Life, Moscow, March 9 and 28, and April 6, 11, 14, and 21) indicate the total production of the three principal oil fields of Russia as 73,850,000 poods, compared with 75,564,000 for the preceding three months. The decrease was principally due to the falling off of Grozny gusher production. The table below gives the production in poods (62 poods equal 1 long ton; 8⅛ poods equal 1 United States barrel):

Production of oil in principal Russian fields.

Fields.	January.	February.	March.	Total, January-March, 1923.	Total, October-December, 1922.
	Poods.	*Poods.*	*Poods.*	*Poods.*	*Poods.*
Baku	17,620,000	16,171,000	18,062,000	51,753,000	49,625,000
Grozny	6,737,000	6,161,000	7,197,000	20,095,000	23,773,000
Emba	675,000	645,000	682,000	2,002,000	2,166,000
Total	24,932,000	22,977,000	25,941,000	73,850,000	75,564,000

The average monthly production from all three fields in 1913 was approximately 47,000,000 poods.

Details of Baku Operations.

The number of wells operated in the Baku district in January was 1,442; February, 1,494; and March, 1,480. Wells in drilling, which totaled 98 on January 1, reached 149 in February and 169 in March. By the 1st of April 113 percussion rigs and 43 rotary rigs were in operation. Appreciable increase in production due to completion of new drilling operations is predicted to start in June. The approximate footage drilled was 11,039 in January, 12,495 in February, and 13,720 in March, a total of 37,254 for the quarter, as compared with 21,546 for the three preceding months.

Baku refineries worked up 30,917,000 poods of crude oil during the quarter, as compared with 30,179,000 for the last quarter of 1922, while the output of petroleum products reached 9,305,000 poods, against 11,036,000 in the same quarters. Baku oil shipments, which fell off in December, showed a perceptible increase in March, when navigation northward to Astrakhan again opened. The total shipments for the quarter reached 9,723,000 poods. Stocks at Baku were reported as 84,079,000 poods on April 1.

The Grozny District.

In the Grozny fields the number of wells operated was 202 in January (including 5 gushers), 211 in February, and 219 in March. In spite of the increase of wells in operation, production of pumped oil decreased owing to the fact, apparently, that operations were renewed on old wells having little productive capacity, while there was a falling off in gusher production. Wells in drilling numbered 23 in January, 27 in February, and 31 in March. The footage drilled was approximately 1,813 in January, 2,380 in February, and 2,569 in March. Oil worked up by the refineries reached 5,394,000 poods in January and 4,149,000 in February. There were piped and shipped via Grozny and Petrovsk 5,928,000 poods in January and 3,443,000 in February. Stocks on March 1 were reported to be 16,041,000 poods.

RUMANIAN PETROLEUM TRADE.

Production of crude petroleum in Rumania during the first quarter of 1923 totaled 383,421 metric tons, an increase of 64,394 tons, or about 20 per cent, over the output for the corresponding period of 1921. The March production was larger than that of any month during the past two years, showing a gain of 19 per cent over the preceding month and 20 per cent above March, 1922. The monthly production by fields during March, 1922, and the first three months of 1923 is shown in the following table from figures published in the Moniteur du Petrole Roumain:

Production of crude petroleum in Rumania.

Districts.	March, 1922.	January, 1923.	February, 1923.	March, 1923.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*
Prahova	90,647	94,021	85,361	90,590
Dambovitza	14,395	23,175	20,981	37,188
Buzan	7,578	7,309	6,878	7,293
Bacan	3,229	3,514	3,314	3,797
Total	115,849	128,019	116,534	138,868

The price of crude petroleum in Rumania was advanced several times during March, and on March 31 it was quoted around 26,500 lei per carload of 10 metric tons, for an average grade. At the prevailing rate of exchange this would be approximately $12.60 per metric ton. The advancing prices for crude and for refined products sold for export tended to improve the general feeling in petroleum circles, this being evidenced by recent substantial advances in the shares of most of the oil companies traded in on the Bucharest Bourse.

Export Trade in Refined Products.

The demand for refined products for export has been generally in excess of the supply, and prices showed a corresponding upward trend. The price of light gasoline, quoted at 19½ cents per gallon on February 1, had risen to 22 cents on April 1, and heavy gasoline from 12 to 18 cents. Kerosene (refined oil) rose from 5¾ cents per gallon on February 1 to 6 cents on April 1, and gas oil from 4 to 6 cents. Exports of refined products during January and February, as compared with the first two months of 1922, are shown in the following table:

Exports of refined petroleum products from Rumania.

Products.	1922		1923	
	January.	February.	January.	February.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*
Gasoline	11,976	6,233	5,492	3,729
Refined oil	16,176	12,241	10,750	11,694
Gas and fuel oils	333	912	1,175	3,203
Lubricating oil	554	387	1,037	1,010
Crude oil			925	

BRAZILIAN IMPORTS OF GASOLINE AND KEROSENE.

Imports of gasoline into Brazil during the first nine months of 1922 totaled 19,095 metric tons (1 metric ton equals approximately 360 gallons), as compared with 40,116 tons during the corresponding period of 1921, according to the Jornal de Comercio, Rio de Janeiro. Gasoline imports into Brazil during the entire year of 1921 are given as 47,210 tons, against 36,383 tons in 1920 and 25,855 tons in 1919. Receipts of Mexican gasoline, which amounted to very little before the war, had increased to 11,685 tons in 1921.

Rio de Janeiro is the principal port of entry for gasoline, 20,111 tons having been received at that point during the year 1922, and 17,816 tons in the preceding year. Other ports through which considerable quantities of gasoline are imported are Santos, Rio Grande do Sul, Penambuco, and Bahia, with gasoline imports in 1921 of 15,068 tons, 4,277 tons, 1,343 tons, and 1,132 tons, respectively.

Brazilian imports of kerosene during the first three quarters of 1922 totaled 55,774 metric tons (1 metric ton of kerosene equals approximately 330 gallons), as compared with 53,058 tons during the first nine months of the preceding year and 79,529 tons during the entire year 1921. Brazilian purchases of kerosene in Mexico are also increasing, amounting to 18,654 tons in 1921, against only 380 tons in 1919 and none in 1918.

Petroleum Notes.

New Spanish Drilling Concessions.

During March the Spanish Government granted 14 concessions for petroleum drilling, covering an area of 22,000 hectares, according to a recent cable from Commercial Attaché Charles H. Cunningham, Madrid.

Exploration in Panama.

Three American oil corporations are now exploring for oil in the Republic of Panama. One company is reported to have recently received an extension of six months for carrying on explorations in 1,000 hectares of land located in the Province of Chiriqui, west of the Canal Zone. (Consul George Orr, Panama, March 15.)

Esthonian Shale Concessions.

Oil shale concessions still occupy a prominent place among the undertakings given out by the Esthonian Government. Five thousand more hectares of such land for investigation have been allotted to the Aktiebolaget Emissions Institutet. The authorities expect to hire a thousand more workmen during the summer in the Government oil-shale mines. (American Minister F. W. B. Coleman, Riga, April 12.)

Proposed British Oil Storage Bill.

Copies of the bill which is under discussion by the British Parliament relative to the storage of petroleum in Great Britain have been forwarded to the bureau by Commercial Attaché W. S. Tower, and may be consulted by interested parties on application to the Petroleum Division or to any district or cooperative office. Copies of the British petroleum acts of 1871 and 1879 are also available for consultation as well as a guide to the explosive act of 1875. References to the above exhibits should be made by name.

New Mexican Wells in April.

The Mexican Department of Industry and Commerce reports that 28 new wells were brought in during the month of April, with a total average daily production of 92,446 barrels. This is in comparison with somewhat less than 19,000 barrels which is said to have been the average total daily production of wells drilled in the previous month. More than 50 drilling permits are reported to have been granted in April, all of which covered lands in already proven districts. (Assistant Trade Commissioner H. Bentley Mackenzie, Mexico City, May 4.)

Development of a New Industry in Sheffield.

The increasing use of oil as fuel for steamship propulsion has resulted in the substitution of oil for coal in cooking ranges and appliances in the galleys. One Sheffield firm, after exhaustive experiments, has adopted the "Kirmode" system of oil firing for the oil ranges for galleys manufactured by it for oil-burning vessels. This firm is said to have received some valuable orders for oil-burning ship galley ranges and equipment. With the revival of shipbuilding and conversion of coal consuming ships into oil burners, a large increase in

the use of oil for ranges is anticipated. (Consul William J. Grace, Sheffield, England, April 9.)

British Activities in China.

Improvement in Anglo-Chinese industrial relations gives especial interest to the announced plans and prospects of the recently reconstructed Yang-Tse Corporation (Ltd.), of London. Petroleum and coal exploitation in the Province of Szechwan forms the basis of this company's activities, but the concessions and contracts obtained include important rights in connection with other minerals and the development and modernization of industries generally in this rich Chinese Province. In February, 1922, an arrangement was made for the active cooperation of the Yang-Tse Corporation (Ltd.) and the Pekin Syndicate (Ltd.). This latter company has control through its allied companies, namely, the Fu Chung Corporation and the Chung Yuan Mining Co., of mining rights for petroleum, coal, and iron covering 20,000 square miles in various districts in Shansi Province. Another contract gives this syndicate similar privileges in all of the Province of Honan lying north of the Yellow River. (Vice Consul Chas. L. DeVault, London, England, April 13.)

New Board of Directors for Argentine Petroleum Workings.

In order to secure general efficiency in the administration of the fiscal petroleum workings at Comodoro Rivadavia the executive of Argentina, in a decree dated April 14, placed the direction of these activities in the hands of a board composed of Carlos Madariaga, Eduardo Zuberbuhler, Emilio Palacios, Raul Carranza, Julio Pena, and Napoleon Paz. Col. Enrique Mosconi, the present director, will assume the chairmanship of the board of directors. At the same time these appointments were announced a statement was also made that the petroleum administration is considering the construction of a large refinery in Buenos Aires, from which pipe lines will be laid to the site of large industrial plants in the city and surrounding suburbs for the purpose of supplying these enterprises with fuel oil. These latter plans, however, according to a statement by the director, have as yet assumed no definite form. (Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, April 18.)

Additional information regarding petroleum appears in this issue under the following sections:

Cable review, Latin America: April production of petroleum in Mexico.
Coal: British trade in bunkering fuels.
Rubber: Venezuelan market for American rubber goods.
Tariffs and trade regulations: Increased duty on motor spirit in South Africa.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

INCREASING VENEZUELAN MARKET FOR RUBBER GOODS.

A. M. Walker, Rubber Division.

Shipments of American rubber manufactures to Venezuela increased 34 per cent in value during 1922 when $248,971 was exported, as compared with $185,482 worth in 1921.

Sixty-seven per cent of all the rubber goods imported into Venezuela represents rubber tires for motor cars and carriages. In 1921—the latest year for which information is available—the aggregate value of rubber goods imports was 1,132,804 bolivars (1 bolivar=$0.193 at par), of which tires amounted to 759,381, rubber hose 30,983, rubber footwear 11,924, and manufactures of rubber not otherwise specified 330,516.

American Tires Dominate the Market.

Eighty per cent of the rubber tire imports (based on figures of value) originated in the United States in 1921; in fact, this proportion might be raised to 92 per cent, inasmuch as Panama is credited with supplying 12 per cent, which it secures almost exclusively from the United States. England is credited with 6 per cent, and the insignificant balance came from France and Holland. The tires imported from sources other than the United States are chiefly bicycle and carriage tires, as the automobile-tire market is nearly 100 per cent American.

The value of United States automobile-tire exports to Venezuela rose from $142,477 in 1921 to $188,877 in 1922. In March, 1923, exports were valued at $31,316, against $26,119 in the previous March. The 1922 exports were classified as follows: 11,407 casings, valued at $160,068; 13,604 tubes, valued at $26,575; and 122 solids, valued at $2,234. All other tires were valued at $2,958.

When comparing the 1922 total automobile-tire exports—$188,877—with the corresponding total of the pre-war year 1913—$10,703—there is an unusual growth in the trade.

Automobile Registration Expanding.

A year ago there were 2,500 passenger cars in Venezuela; to-day there are 3,300. Coincidentally the number of motor trucks has increased from 200 to 350, and motor cycles from 60 to 150. The value of Venezuelan imports of automobiles amounted to 1,807,514 bolivars in 1921, of which 87 per cent came from the United States. Two-thirds of the motor cars are in Caracas, the remainder being principally in Maracaibo, Valencia, and Puerto Cabello. About 75 per cent of the passenger cars in use take inch-clincher tires, 20 per cent straight-sides, and 5 per cent millimeter clinchers. The majority of the trucks in use are light trucks equipped with pneumatic tires on the front wheels and solid tires on the rear.

Highways extend for some 1,600 miles throughout Venezuela, but these roads are in bad condition generally. With a view to remedying the situation, the Government has been spending around 4,000,000 bolivars annually since 1915 on road construction.

Sales of Mechanical Rubber Goods Increasing.

United States exports of rubber belting, hose, and packing to Venezuela increased from $19,180 in 1921

to $24,313 in 1922. The exports for the first quarter of 1923 were valued at $6,066, compared with $3,985 for the corresponding period in 1922.

Among the principal users of mechanical rubber goods are the oil companies and cotton mills. Petroleum production is growing in importance. The output rose from 18,248 tons in 1917 to 335,000 tons in 1922. At least four companies are engaged in oil development, all with offices in Maracaibo. One of the companies operates two refineries. There are two cotton mills at Valencia, one at Caracas, and one at Cumana producing the cheaper grades of cloth. Other manufacturing industries are unimportant. The 12 railroads operating in Venezuela cover only 644 miles of line. Fairly important quantities of gold, copper, and coal are mined. One-fifth of the entire population is engaged in agriculture, there being 11,000 sugar plantations.

Good Market for Rubber Soles and Heels—Sundries.

The Venezuelan demand for rubber footwear and clothing is comparatively limited, being supplied by the United States, United Kingdom, and France. Venezuelan statistics show imports of 1,154 kilos of rubber footwear valued at 11,924 bolivars and 4,226 kilos of raincoats valued at 57,932 bolivars in 1921.

The most conspicuous demand in the rubber footwear section of the trade is that for soles and heels. United States exports to Venezuela in 1922 included 30,920 pounds of rubber soles and heels, valued at $13,367. Corresponding exports in 1920 were valued at $5,351, and in 1921 at $6,281. A further growth occurred in the first quarter of 1923 ($4,686) as compared with the same period of 1922 ($3,020).

Practically no American-made rubber boots go to Venezuela (only $132 worth in 1922), and the same is true of rubber shoes. Exports of the latter are slowly increasing, however, having amounted to 1,674 pairs in 1922, valued at $1,305, as compared with 941 pairs, valued at $914 in 1920—the previous high record.

There is a good demand for hot-water bottles, ice caps, sponges, syringes, etc., the bulk of which is imported from the United States, although there is strong competition through imports from England, France, and Germany. United States exports to Venezuela in 1922 included 4,245 pounds of druggists' rubber sundries, valued at $5,644; 1,962 pounds of hard-rubber goods, valued at $2,393; and 9,081 pounds of rubber manufactures not otherwise specified, valued at $7,832.

Rubber Trade Notes.

Rubber Boots for Lake Fishermen in Canada.

There is a potential market for high-grade rubber boots in this city. A number of fishing craft operate from ports in this district situated on Lakes Erie and Huron. (Consul G. R. Taggart, London, Ontario, May 7.)

Tire Market in Bahia, Brazil.

There are 400 automobiles in Bahia, Brazil. Michelin holds second place in the tire market, there being only three other makes (all American) in stock at present. The Michelin agent gives 10 per cent discount to consumers. (Consul Thomas H. Bevan, Bahia, April 5.)

New Tire Stocks in Angola.

A new dealer has entered the Angola tire market and a new stock of tires will shortly be placed on sale. Other dealers have been importing tires and price fluctuations are anticipated, although during the past three months price changes have been unimportant. (Consul Reed P. Clark, Loanda, April 9.)

American-Made Tires Dominate in Curacao.

There is only one European tire (Continental) on the market and American tires are in favor in Curacao. Representative prices are as follows: 30 x 3 1/2 clinchers, fabric—30 to 32 florins; cord—36 to 40 florins; straight side, 32 x 4, fabric—45 to 50 florins; 32 x 4 cord—58 to 60 florins; 32 x 4 1/2 cord—77 to 78 florins. One dollar equals 2.525 florins at present exchange rates. (Consul B. S. Rairden, Curacao, April 23.)

Tire Market in Kalgan, China.

Active competition from the Japanese Dunlop has caused considerable price reductions in Kalgan, China. An American house is agent for Dunlop, and although the firm is supposed to have an exclusive agency, Chinese firms in the district are able to undersell the agent. The market is good and all that is needed is to meet the Dunlop prices. (Consul Samuel Sokobin, Kalgan, April 1.)

Tire Competition and Consumer Discounts in Madras, India.

The same retail price lists are in effect in Madras and Calcutta. Michelin and one American company practically divide honors for first place, while another American company is running a close contest with Dunlop for the next position. Continental, Avon, and another American tire are also fairly prominent in the market. Native retail tire dealers will generally give as much as 25 per cent off the listed retail prices. (Consul H. A. Doolittle, Madras, April 12.)

Exchange Unfavorable to American Tire Trade in Morocco.

In the Spanish zone of Morocco the order of popularity of various makes of tires is Michelin (French), Goodrich, Dunlop (American), and Continental. The prices of various makes are based on Michelin retail prices. Michelin allows a trade discount of 10 per cent on every contract of 20,000 francs, and a further 4 per cent on every contract of 50,000 francs, and 1 per cent in excess of 50,000 francs. At present exchange the market for American tires can scarcely be called fair. (Vice Consul Charles I. Graham, Tangier, April 10.)

Tire Market in Venezuela.

In addition to several American makes of tires, which hold leading positions in Puerto Cabello, Venezuela, Dunlop and Michelin tires are on sale. The Michelin 30 x 3½ clincher fabric tire retails at 90 bolivars, the cord at 100 bolivars, and the 32 x 4½ straight-side cord at 260 bolivars. Corresponding prices for American makes are: 30 x 3½ clincher fabric, 105–110 bolivars; cord, 125 bolivars; and 32 x 4½ straight-side cord, 280 bolivars. (Consul William P. Garrety, Puerto Cabello, April 23.)

Tire Trade of Barbados, British West Indies.

Dunlop is the only make of tire other than American represented in Barbados, and ranks second in point of estimated sales. Nine different kinds of American-made tires are reported on sale. Representative prices for Dunlop casings are as follows: (Fabrics, clincher) 30 x 3½, $13.50; 31 x 4, $20; (straight side) 32 x 4, $22; 33 x 4, $24; (cords) 30 x 3½, $16; 32 x 4, $28; 33 x 4, $30. Consumer discounts are not customary, but a few retailers allow 5 per cent for cash. Good crop prospects and reduced car and tire prices are giving new impetus to motoring. (Consul John J. C. Watson, Barbados, April 18.)

Tire Price Increases in Germany.

In Germany fabric nonskid tires are commonly steel studded. Prices are changing rapidly. Tire manufacturers have a price combination and prices for the leading makes (Continental, Peters Union, Excelsior, Calmon, Dunlop, and Harburg-Wien) are practically uniform. During the past three months prices in paper marks have increased about 160 per cent, while the advance in dollars is about 26 per cent. A Continental clincher cord tire size 30 x 3½ costs 292,500 marks ($13.84). (Consul General William Coffin, Berlin, April 19.)

CRUDE RUBBER.

Crude Rubber Notes.

Exports of Rubber from Medan, Sumatra.

Rubber exports through the Medan Sumatra consular district during 1922 to all countries totaled 41,461 metric tons, 27,588 tons of which was destined for the United States. During January, 1923, exports to the United States totaled 2,761 metric tons. (Consul C. O. Spamer, Medan.)

Rubber Exports from Brazil and Peru.

Exports of rubber from Para and Manaos, Brazil, and Iquitos, Peru, to the United States and Europe during March, 1923, were 3,505,940 and 1,151,839 pounds, respectively; total, 4,657,779 pounds. The total for March, 1922, was 4,164,729 pounds, the increase in the corresponding month of this year being 493,050 pounds. (Consul George H. Pickerell, Para, Brazil, April 9.)

Additional information regarding rubber appears in this issue under the following section:

Cable review, Latin America: Price of rubber in Brazil.
Cable review, Far East: Conditions in Straits Settlements rubber market.
Tariffs and trade regulations:
Danish import duty on inner tubes.
New duties on tires in South Africa.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

DEMAND FOR CHEAPER LEATHER AT LEEDS FAIR.

Consul Percival Gassett, Leeds, England.

Many tanners of sole leather were in attendance at the fair held at Leeds the middle of April, and in every case they were anxious for business. Stocks of English and wet salted bends in the heavy and medium weights are much larger than usual, and although indisposed to quote anything below ruling quotations, there was a disposition to consider offers. The only demand was for cheap sole leather from dry hides. These were not in abundant supply, as there had been a run on them for the spring season's boot trade. Dealers therefore held out for full prices.

Hide offals in pinned shoulders and bellies and rough shoulders for welting work were inquired for and there was a sale for leather of good color and at reasonable prices. Very little American leather is now on the English market, as home producers are making and selling their productions on better terms than importers are able to offer.

In upper leathers the market was almost lifeless. East India tanned kips were offered in small lots, but there were few buyers. The Indian tanners are holding for very high prices, and within the past 12 months, in consequence of the clearance of post-war stocks held by the Government, quotations have advanced about 12 cents per pound. This has caused a shrinkage in turnover for the reason that boot manufacturers are wanting cheaper rather than dearer leather to meet the demand for low-priced boots and shoes. There is, however, little prospect for some months of a change favorable to the leather dressers, and in the meantime they are limiting their output and selling at the best prices available. In the finer leathers, such as suede, patent, glacé, and imitation grained classes, the business done was strictly hand to mouth.

DECREASE IN LIVE STOCK IN NEW SOUTH WALES.

Vice Consul Walter T. Costello, Newcastle, Australia, March 2.

The official estimate for 1922 of live stock in the State of New South Wales indicates an important decrease when compared with the figures for 1921. According to the 1922 estimate, there were 509,970 horses in the State, 3,082,931 cattle, and 33,987,887 sheep, as compared with 525,431 horses, 3,250,633 cattle, and 34,776,075 sheep in the preceding year.

In referring to the present estimate the chief inspector of stock states that although the number of horses is less by 15,461 than in 1921, the estimated decrease is only half that of the preceding year. The decline at that time was credited to less breeding, owing to poor demand and no market, and the same reason is put forth for the falling off in 1922. Drought was held responsible for the decrease in the number of cattle and sheep. In addition to this, prices were poor, resulting in limited breeding, and many calves were killed because it would be unprofitable to raise them.

GROWING DEMAND FOR AMERICAN LEATHER IN EGYPT.

Consul Lester Maynard, Alexandria, March 2.

The year 1922 was a much more satisfactory one for the Egyptian hide and leather business than the preceding one. Egypt imported more than $800,000 worth of leather and $33,000 worth of hides and skins during the past year, as against only $500,000 worth of leather and $21,000 worth of hides and skins in 1921. This considerable gain is due to the fact that importations in 1920 were excessive and many shipments were rejected, with the result that in 1921 the market was disorganized and the liquidation of stocks was in process.

Alexandria is an important export market for the hides and skins of Syria and the Sudan. During 1913 Egypt exported hides and skins to a value of almost $1,200,000, but in 1921 these exports declined to about $650,000 and in 1922 to less than $550,000. Of the preceding amounts the United States purchased hides and skins in 1913 valued at $80,000, in 1921 about $50,000, and in 1922 less than $30,000.

Leather Manufacturing in Egypt.

The tanning of hides and skins in Egypt is general throughout the country and very good qualities of sole leather are made which are converted into native shoes with soft leather uppers, which are also tanned locally. For custom-made shoes of good quality American leathers are very popular in Egypt, and as the result of the establishment of energetic agencies for American tanneries it is anticipated that the use of American leather in this country will increase.

Hide and Leather Trade Notes.

Hide and Leather Situation in France.

French prices of heavy hides decreased, but calfskins and sheepskins are practically unchanged. Tanners' sales continue slow owing to high prices. There is little business in sole leather, except cheaper grades, although stocks are low. Sales of English leathers and black glazed kid are poor, box calf sales are fair, and colored patent kid leather is in good demand. (Cable from Commercial Attaché Chester Lloyd Jones, Paris, May 13.)

Sharp Advance in Czechoslovakian Goatskins.

Recent sharp advances in the domestic price of Czechoslovakian goatskins, which has raised the question of Government restriction of exports, led the representatives of the tanners and glove manufacturers on April 22 to fix maximum prices for goatskins at 6.50 crowns for large and 4.25 for medium skins (approximately 19½ and 13 cents), which the members of the manufacturers' association agree not to exceed. No restriction of exports has yet been adopted. (Trade Commissioner H. Lawrence Groves, Prague, April 21.)

Finland's Foreign Trade in Hides and Leather.

The exports of raw hides and skins from Finland rose in 1922 to 1,544,249 kilos, which represents an increase of about 300,000 kilos over the exports of 1921, and 1,000,000 kilos over 1920. The exports of hides and skins so far for 1923 are very much in excess of the exports for the corresponding months of 1922. The drop in the exports of tanned leather for 1922 as compared with 1913 amounts to about 700,000 kilos. Nevertheless, the statistics for 1922 bring out the fact that there is a considerable improvement in the exports of leather for last year over 1920 and 1921, the exports having been considerably increased by the demand from Russia. (Le Cuir, Paris, April 12.)

Slightly Better Tone in Rumanian Hide and Leather Market.

During the first half of April there was a distinct increase in the demand for heavy hides and calfskins in the Rumanian market, and all offerings were quickly taken. Prices generally are firm, even for light hides and skins, which were in less demand. Leather was in little demand, with the exception of a few lines. However, prices remained quite firm, as is naturally to be expected in view of the firmness in the raw-material market. The principal reason for the quietness in the leather market is attributed to the lack of liquid capital. The market for sole leather was fairly active, but this activity was confined to heavy bends. Buyers also displayed some interest in upper leathers, especially cow side upper, and there was a fairly active demand for sheepskin linings. (Le Cuir, Paris, April 18.)

Difficulties in Yugoslavia Leather Market.

The hide and skin market in Yugoslavia is still very unsettled. The requirements are large, but the scarcity of money due to the refusal of the Government to issue any new paper currency is a considerable hindrance to trade results. The tanners are in many cases carrying large stocks of heavy hides which they can not sell in the country by reason of the shortage of money. One important tannery recently obtained authorization to export its hides without having to pay the export duty and was able in this way to sell several carloads abroad. The hide and skin prices reflect this state of affairs and a slight weakness is evident. The financial situation has exactly the same effect on the leather market, and box calf and goat and kid uppers in colors are the only lines displaying activity. (Le Cuir, Paris, April 19.)

Future Trend of the French Hide and Leather Market.

Speculation as to the future trend of prices of hides in France is divided. One group holds that the present prices are too high, and, therefore, they must decline. Others, comparing present price levels with the pre-war relation of hide and skin prices to other raw materials, foresee no considerable modification in prices during the next few weeks. Furthermore, they strengthen their argument by drawing attention to the fact that the tanneries have not only been buying from hand to mouth, but have reduced production for several months past. This has resulted in the depletion of the stocks of leather. They point out that this shortage of stock must continue, even if the buyers of leather only cover for immediate requirements for some time to come. Moreover, there is a general activity in the world's hide and skin markets, with prices holding very firm as a rule. (Le Cuir, Paris, April 8.)

Great Britain's Live Stock Slaughter Figures.

The number of cattle slaughtered in Great Britain during the year ending May, 1922, was 2,236,000. In this same period 1,167,000 calves were killed. The slaughter of sheep for 1921 was approximately 12,000,000. It will be noted that the figure for the slaughter of sheep is approximate and for the year 1921. The reason for this is that there are no available statistics for slaughter of sheep, and information on the point is usually obtained by deduction. It is assumed that one-half of the country's sheep live stock is slaughtered annually. In reality much more than one-half is killed, but the shrinkage is reduced by the number of lambs, chiefly ewe lambs, which are allowed to attain maturity. This method of deduction in practice works out to be approximately correct. The stock of sheep in the country in 1921 was 24,273,000. The figures for the sheep census for 1922 are not yet available. (Commercial Attaché Walter S. Tower, London, April 26.)

Additional information regarding hides and leather appears in this issue under the following section:

Tariffs and trade regulations: Reduced export duty in Yugoslavia on hides.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the reference numbers given. Where no reference number is given further information is not available.]

Australia.—The date set for the receipt of tenders for the construction of the Sydney Harbor Bridge at Sydney, New South Wales, has been extended to November 30, 1923. (Australian High Commissioner, New York.)

Mexico.—It is reported that the Mexican Congress on April 22, 1923, made an appropriation of 800,000 pesos ($400,000) for the purpose of beginning the work of building a railroad from Mexicali to a port on the Gulf of California—probably the port of San Felipe. The length of this railroad when completed will be about 150 miles. A preliminary survey of the route is now under way. According to present plans, the construction of the railroad is to begin at Mexicali, where it will connect with the lines of the Inter-California Railroad—a branch of the Southern Pacific system. Local officials hope to complete 25 miles of the line before next fall. The work of preparing for the reclaiming of irrigable lands will also be put under way as soon as actual construction is begun on the railway. (Consul H. C. von Struve, Mexicali.)

Brazil.—According to a law approved April 24, 1923, the governor of the State of Pernambuco is authorized to expend the following amounts for public works: Construction of a bridge over the Capibaribe River at Sao Lourenco, 80,000 milreis (about $8,000 at present exchange); construction of municipal jail at Villa Bella, 20,000 milreis; municipal jail at Itambe, 25,000 milreis; to assist the municipality of Garanhuns in constructing an automobile road between Garanhuns and Brejao, 20,000 milreis. (Consul C. R. Cameron, Pernambuco.)

Canada.—The Minister of Public Works of the British Columbia Government, Parliament Buildings, Victoria, British Columbia, Canada, has announced that the Province will expend $2,300,000 on road construction and bridges for the year 1923. The chief items of new work on Vancouver Island will be: Completion of 3 miles of cement concrete paving on the Victoria-Sidney road; construction of the Tofino-Ucluelet road on the west coast of Vancouver Island, $10,000; 2 miles of hard surface at Nanaimo and Fulford Harvor road, $10,000. (Vice Coneul R. M. Newcomb, Victoria, British Columbia.)

France.—The Chamber of Commerce of Havre has recently been authorized by the National Parliament to borrow the sum of 20,000,000 francs for further improvement and extension of the port of Havre. It is understood that this money is to be advanced by and reimbursed to the National Treasury. (Consul Herbert O. Williams, Havre.)

Additional information regarding construction news appears in this issue under the following section:

Latin America: Construction work in Honduras.
Cable review, Far East: New post office building to be constructed at Singapore.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

RADIO DEVELOPMENT IN CZECHOSLOVAKIA.

Acting Commercial Attaché H. Lawrence Groves, April 29.

Construction and operation of telephone and telegraph apparatus, including radio materials, were decreed a State monopoly by the Czecho-Slovak Government in the law adopted March 23, 1923. Application for a special decree whereby the Ministry of Posts and Telegraphs would have power to grant concessions or licenses was presented to the Ministry of Council for consideration on April 27.

The manufacture, sale, storage, and importation of radio telephone and telegraph equipment is only permitted under license from the State, the Ministry of Commerce, in cooperation with the Ministry of Posts and Telegraphs, being authorized to grant licenses for this purpose. The Ministry of Posts and Telegraphs also supervises and controls the manufacture, sale, and storage of radio equipment and cooperates with the Ministry of Commerce in the granting of licenses.

Up to the present time only one company (Radioslavia) has obtained a license for the manufacture of radio equipment in Czechoslovakia. It has not yet started production. This company is understood to be affiliated or closely connected with the French company Societe Francaise Radio-electrique. A German company, Gesellschaft fur Drahtlose Telegraphie, System Telefunken, is said to be promoting a company with Czecho-Slovak capital for the purpose of exploiting German wireless patents, but it has not yet been granted the necessary license.

Regulations Regarding Radio Distribution.

The attitude of the Ministry of Posts and Telegraphs toward the granting of licenses to transmit as well as to receive radio messages is said to be favorable in the following instances: Technical high schools, for scientific purposes; industrial establishments which have obtained special licenses from the Ministry of Commerce to manufacture radio equipment; ships and aircraft; electric-power stations, waterworks, and other establishments of public utility, under special conditions; companies which have been authorized by the State to broadcast matter of general interest, such as news statements, exchange reports, agricultural reports, concerts, lectures, etc.

Licenses for the operation of receiving sets only will be granted to institutions, companies, and those regularly taking the reports transmitted either by the

State Telegraph Office or by companies authorized by the State to transmit such messages.

Amateur Sets May Soon Be Sold.

Up to the present time nothing has been accomplished in the way of introducing amateur radio-receiving sets into Czechoslovakia. Under the law above referred to prospective purchasers of such outfits must first obtain a Government license. As yet the Government has not definitely determined its attitude toward the granting of such licenses, but it is probable that in the forthcoming Government decree, already referred to, providing regulations for the control of wireless activities, definite provisions will be made for the granting of licenses for private ownership of radio receiving outfits. It is probable that this regulation will authorize a machine having but one prescribed wave length, rather than the adjustable wave length, so that its use can in a measure be restricted and controlled by the Government.

It is reported that the large German radio manufacturers are forming a combine for the purpose of manufacturing amateur radio sets with the intention also of establishing broadcasting stations. It seems not unlikely, however, that under present conditions the Czecho-Slovak Government would be inclined to look favorably on the granting of a concession for broadcasting and for the sale of small radio outfits in Czechoslovakia to a responsible firm of some other nationality.

[The address of the Czecho-Slovak Ministry of Posts and Telegraphs, together with the details of the radio stations now in operation in Czechoslovakia, may be obtained from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., or through any of the Bureau's district or cooperative offices, by referring to file No. 9213.]

Electric Drive in Indian Jute and Cotton Mills.

Commenting on the choice between rope or electric drive for British Indian mills, C. B. Chartres, in the Indian and Eastern Engineer, states that for old mills which have grown gradually and have rather scattered premises with two, three, or more engines, driving different sets of shafting in separate buildings, the installation of a central electric-generating station for supplying power to electric motors on the shafts is undoubtedly the best scheme. But for old mills so arranged that a single unit can be installed to replace one or two existing engines, and at the same time provide the little extra power which mill managers seem to always want, a geared-turbine installation will be found much cheaper in first cost, probably more reliable, and more economical than an electric scheme.

In the case of a new mill the capital outlay for an electrical drive will be slightly higher than if a geared turbine were adopted, while the coal used per ton of production will be 10 per cent to 15 per cent higher, so that from an economic point of view the mill owner need only consider electric drive if the new mill is to be the first of a group of mills to be established in fairly close proximity to one another. In this case a central power station would have to be built for large turbo-generator units, but the gain in steam economy of the large sets is offset to some extent by the fact that each mill in the group must have its own boiler plant for process steam, and the extra capital outlay on the large power station will be a heavy liability against the first mill in the group.

Electrical Trade Notes.

Venezuelan Road Considering Electrification.

A detailed study is being made by the La Guaira & Caracas Railroad with a view to the electrification of this line. (Consul Thomas W. Voetter, Caracas, April 28.)

Peruvian Electrical Imports Gain.

Shipments of electrical supplies arriving at Peru reached a total of 622 cases during March—almost double those of the month previous. American manufacturers supplied about half of this quantity, the balance being divided between German and English exporters. (Consul C. E. Guyant, Callao-Lima, April 2.)

Chilean Electrification Progressing.

Electrification of the line between Santiago and Valparaiso is progressing satisfactorily, the first section, extending from Santiago to Til-Til, having already been completed. Test runs have been made over this section with very gratifying results. (Assistant Trade Commissioner W. E. Embry, Santiago, April 16.)

Spanish Electric Railway Activity.

Reports are current that the lines of the Valencia City electric tramway will be extended to the outlying village of Boyona.—In Vigo the press is calling attention to the advantages which would be derived from an electric belt line around the peninsula of Morrazo.—According to the consul at Bilbao the Ferrocarriles Vascongados has decided to electrify its lines. (Consul F. A. Henry, Barcelona, March 27.)

Radio Regulations in Java.

Present regulations at Soerabaya, Java, prohibit the use of radio telephone or telegraph apparatus by private persons, according to Consul Parker W. Buhrman. Exception is made where a special permit from the Governor General has been obtained. The Radio Association of Soerabaya is cooperating with the commercial associations of the islands in an effort to have the regulations modified in such a way that individuals may install radio sets.

Venetian Hydroelectric Loan Floated.

Venetian electric-power companies are planning to float loans through local Italian banks instead of through foreign financial syndicates. It is reported that American capital, which the Italians tried to obtain, was offered at too unfavorable terms to receive the approval of the Italian electric interests. A recent study was made of the plants in the Adriatic group and it is expected that an extensive construction program will commence as soon as the loan is made available. (Consul James B. Young, Venice, April 21.)

Concessions Granted by Greek Government.

Representatives of American interests have been granted options by the Greek Government for a period of 15 months covering various water power, drainage, and irrigation projects, port works, and railway lines, according to a recent report from Consul General W. L. Lowrie, Athens. It is provided that an American syndicate be formed within four months for the development of these projects. A translation of the agreement, which is dated March 31, 1923, is available for loan to firms interested at the Electrical Equipment Division, Department of Commerce, Washington, D. C., or through any of the bureau's district or cooperative offices. Inquirers should refer to file No. 92789.

Cheaper Radio Material for the Netherlands.

Replies by American manufacturers to Dutch firms seeking to import radio material all quote prices too high to permit selling the American product on the Dutch market, according to Consul F. W. Mahin, of Amsterdam. Competition from other countries, especially Germany, is said to make it impossible for dealers in the Netherlands to do business with American firms at the prices quoted. The demand for radiotelephone apparatus in the Netherlands, however, is good.

German Export Taxes Benefit Italian Electrical Industry.

Germany's rigid control over its exports, which has greatly restricted the quantity of electrical materials shipped to the Italian market, is reacting to the benefit of Italian manufacturers of electrical equipment and supplies. Should the Italians be able to improve their technique and the quality of their product efficiently, while the German restrictive measures are in force, it is probable that they can resist any efforts on the part of the German exporters to regain their lost Italian markets. (Commercial Attaché H. C. McLean, Rome, April 24.)

Southern Italy Gets Loan for Hydroelectric Work.

Through the Ministers of Finance and Public Works a loan of 65,000,000 lire (lira=$0.048 present rate of exchange) has been arranged for to promote the Sila hydroelectric development in Apulia and Calabria, together with similar enterprises in southern Italy. The loan is being taken up by the Banco di Napoli, the Banco di Sicilia, and several large insurance companies. The three power companies on whose behalf the loan is effected are the Societa Forze Idrauliche della Sila, the Societa Meridionale di Elettricita, and the Societa Generale Elettrica dell Sicilia. (Commercial Attaché H. C. McLean, Rome, April 3.)

Canary Islands Considering Wireless Telephone Service.

Active discussion has been taking place in the Cabildo Insular de Tenerife of a proposal to establish in the near future wireless-telephone stations at the various islands of the archipelago, reports Vice Consul Raymond Phelan. The present cable service between the islands has been very inefficient of late and this has given rise to the suggestion of using wireless telephony. American manufacturers and exporters of wireless telephone apparatus may obtain the names of the government officials with whom they should communicate in regard to this matter from the Electrical Equipment Division, Department of Commerce, Washington, D. C., or through any of the bureau's district or cooperative offices, by referring to file No. 93188.

Additional information regarding electrical equipment appears in this issue under the following sections:

Cable review, Latin America: Electrical equipment market in Brazil weak.
Latin America: Marconi wireless service opened in Colombia.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

BANK RETURNS REFLECT TRADE OF UNITED KINGDOM.

Financial Trade Commissioner Leland Rex Robinson.

With the close of March, 1923, two fiscal years elapsed since the monthly banking returns were inaugurated in the United Kingdom under the auspices of the Bankers' Clearing House. By making a series of three-month averages, interesting light can be thrown not only upon the business conditions of the last half year, as compared with corresponding earlier periods, but also upon the entire course of commerce since the "lean" months of 1920–21.

Quarterly averages[1] of banking returns for the five leading banks of the United Kingdom.

Items.	October-December, 1921.	January-March, 1922.	October-December, 1922.	January-March, 1923.
Current deposit and other accounts	£1,648,140,000	£1,629,977,000	£1,537,655,000	£1,495,548,000
Coin, bank, and currency notes, and balances with Bank of England	197,911,000	188,883,000	182,198,000	176,609,000
Money at call and short notice	77,947,000	86,801,000	86,306,000	87,528,000
Investments	282,172,000	317,072,000	332,725,000	310,040,000
Bills discounted	404,515,000	380,857,000	290,920,000	276,286,000
Advances to customers and other accounts	702,729,000	676,769,000	658,484,000	663,323,000
Liabilities of customers for acceptances, indorsements, etc	50,743,000	53,306,000	56,618,000	68,680,000

[1] Compiled from monthly reports of the Bankers' Clearing House.

The preceding table shows the average three-month figures for important balance-sheet items during the last quarter of 1921 and the first quarter of 1922, and for the last quarter of 1922 and the first quarter of 1923:

Curtailed Deposits Attributed to Taxes, Security Purchases, and Deflation.

Deposits continue to shrink, and this shrinkage has been consistent since the last quarter of 1921. In fact, the shrinkage in the two last quarters seems to have been considerably greater than for the equivalent months of 1922 and 1921. This further curtailment of deposits may be accounted for in the following ways:

(1) Heavy tax payments, especially in current dues and arrears on income tax, have necessitated a considerable drawing down of bank balances. All of the £100,000,000 excess of ordinary revenue in the financial year just closed has gone automatically to the reduction of the public debt. The heavy reduction of outstanding Treasury bills accomplished in the last three months is due in part to this favorable position of the Exchequer; and, of course, to the extent that the revenue excess is devoted to retiring Treasury bills held by banks, or repaying Ways and Means advances from the Bank of England, the checking against bank deposits to pay taxes must result in a curtailment of total deposits.

(2) The buoyancy of the gilt-edged security market has been most noticeable of late, and considerable investments are being made in fixed-interest groups by the cautious buyer. The drawing of checks to effect security purchases would not, of course, generally speaking, result in an all-round decrease in commer-

cial bank deposits. However, the continued and increasing sales of Treasury bonds have resulted in this, for, as in (1) above, the proceeds have been used in part to retire Treasury bills held by the banks themselves.

(3) The fall in banking deposits has dragged long after the depression, the high point in deposits being reached in the last quarter of 1921—about a year and a quarter after reaction set in. The accommodation loans subsequently have been for the most part liquidated, following the comparative stabilization of prices and the disposal of surplus stocks, and this contraction of old trade liabilities is still to some extent reflected at a time when, as seen in other balance-sheet items, trade is on the upgrade. In fact, according to Dr. Walter Leaf, chairman of the Westminster Bank, the recent decline in deposits is rather a result of past, than evidence of continuing, deflation.

(4) Furthermore, the general price declines have brought about a natural fall in the average deposit accounts during the last year, if not in the last quarter, while there is little doubt that the rate of turnover is now greater for the majority of active checking accounts.

Decrease in Bills Discounted Due to Liquidation of Finance Bills.

Bills discounted have decreased in the last two quarters, and the fall has been consistent since the last quarter of 1921. If figures were available showing what proportion of this item consists of ordinary commercial bills and what part of Treasury bills, conclusions of a more satisfactory character could be drawn. As it is well known that a large proportion of the holdings of discounted bills consists of the latter, one may quite safely attribute the further recent decline in bills discounted mainly to the liquidation of finance bills rather than trade bills.

Investments Decline—Advances and Acceptances Rise.

Investments registered a further decline during the 1923 quarter. This item with the preceding one balances, in the main, on the assets side, the decline in deposits on the liabilities side.

Advances and acceptances continue to rise in an encouraging manner. These two items constitute an unmistakable gauge of trade movements, the former primarily for domestic, and the latter for international commerce. The acceptances, indorsements, etc., have been increasing fairly consistently since the third quarter of 1921, and the progress is much accelerated of late. Advances were declining in the corresponding quarters of 1921 and 1922, but have recently been rising.

These movements are most significant, and it is to be expected that the item "bills discounted" will begin to rise within a few months if the figures under these headings continue to move on an upward path.

Sweden a Possible Market for American Securities.

Chargé d'Affaires Hallett Johnson, Stockholm, April 27.

On account of post-war conditions Swedish industrial securities have paid either no dividends or much lower ones than before the war. This situation has undermined public confidence in Swedish securities and, in spite of the fact that they are now selling at low prices, there is little market for them. The fact remains, however, that in spite of "hard times" there is sufficient money in Sweden for investing purposes. During the last year many municipal loans have been issued and promptly taken up at less than a 5 per cent basis. The Svenska Dagbladet of April 22 states: "A comparison of this month with April of 1922 shows a decrease in the profits of industry loans from 5.82 per cent to 5.53 per cent and for all loans from 5.03 per cent to 4.98 per cent."

The Swedish income-tax law does not contain any provision to the effect that Swedish holders of foreign bonds and securities have to pay a larger tax for such securities than they would have to pay for Swedish bonds. It would seem, therefore, that if some reputable American bond house should open an office in Stockholm and should organize a brisk advertising campaign it would be able to make a good sale of the best-known American securities. Such an advertising campaign could point out that certain of our standard securities pay 6 per cent interest, and that no American income tax would be payable if such interest did not exceed $1,000 for an unmarried man and $2,000 for a married man. Thus the Swedish investor could be shown a safe manner of increasing by perhaps 1 per cent the interest on part of his principal. The average turnover on the Swedish bond market here amounts to 200,000 crowns (about $53,500) a day.

New Borrowing by the Spanish Treasury.

Consul Frank Anderson Henry, Barcelona.

By a Royal decree of the Ministerio de Hacienda, dated April 14, 1923, the Spanish Government announced the issue on May 4 of 500,000,000 pesetas of bearer treasury obligations, in denominations of from 500 to 5,000 pesetas each (1 peseta=$0.193 at normal and $0.1523 at present exchange). These will bear interest at 4½ per cent annually for a period of six months and may be renewed for a like additional period. They will be free from all taxation.

The announcement of this issue, which had been expected for some time, was made necessary by the reduced state of the Treasury balance and by the 215,485,000 pesetas in short-time obligations, due on May 4.

Proposed Loan for the City of Belgrade.

Minister H. Percival Dodge, Belgrade, Yugoslavia, April 17.

The city of Belgrade has about concluded negotiations with an English syndicate for a loan of £330,000, to be secured by all of the property of the city and guaranteed by the Government. The loan is to be at the rate of 8½ per cent, payable in 40 years, and is to be put out at about 73, or to yield approximately 11 per cent. Amortization will commence at the end of the fifth year. The Government has the privilege of paying off the loan at par at the end of 10 years. The funds secured from this loan are to be used to construct water-supply mains, an electric-power plant, and a drainage system, and also for paving and repairs on public buildings.

Additional information regarding finance appears in this issue under the following sections:

Cable review, Latin America:
Increase in Government and railway revenues in Argentina.
Loans floated in Peru.
Mexican bank resumes payments.
Increase in prices of nitrate and other Chilean shares of stocks.
Latin America:
Financial obligations being met by Honduras.
Successful year for Argentine national mortgage bank.
Far East: Consumption of gold in India.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

IMPLEMENT EXHIBITS AT THE LEIPZIG SPRING FAIR.

Commercial Attaché C. E. Herring, Berlin, Germany, April 21.

The variety of implements displayed at the Leipzig Spring Fair (March 4 to 10, 1923) was limited. The principal exhibitors were Deutsche Werke and Krupp. Single-bottom plows and a few chilled and steel plow bottoms were shown. Two 2-horse mowers, displayed by Krupp, and two by Deutsche Werke, were the most conspicuous implements of this type. The only thresher that attracted attention was made by the Deutsche Werke. A drill seeder displayed by Krupp could not in any way compare with an average American seeder.

A few Brabant plows were shown, but there was not the variety observable even in the case of the fairs conducted in France. Stump pullers, stone burr mills, potato cutters, hand feed and ensilage cutters, cider mills, and cream separators filled out the assortment. Six sizes of cream separators were shown by Krupp, varying in capacity from 30 liters to 450 liters per hour (1 liter=1.0567 quarts), with and without stands. The prices as quoted for Germany for hand-driven separators ran from 224,000 paper marks for the 30-liter size to 1,300,000 marks for the 450-liter size, which, from the standpoint of the prevailing exchange (about 20,000 marks to the dollar), appeared to be quite low priced. Quotations for export, however, probably would be higher. Few sales were made and only in small lots.

The Standard Cream Separator, made by the Standard Separator G. m. b. H., Werl I. Westfal, was quoted at 320,000 marks for Germany for the 40-liter size. The same size, made by Krupp, was quoted at 296,000 marks. Although of good appearance, these separators did not seem to be as carefully designed as those of American and Swedish make. Danish, Dutch, and Czecho-Slovak buyers were interested in the exhibits, but there was no active buying noted.

New Cultivating Machine Exhibited.

Some attention was attracted by a combined clod breaker, soil roller, and packer, with connected disk wheels in two sections of six disks each and one section of five disks, somewhat along the lines of a well-known American cultivator. A new feature is an arrangement for weighting the machine. Instead of requiring additional weights, the desired result is attained by shifting the driver's seat along a lever arm toward or away from the axis of the runners. The seat arm is normally placed at right angles with the roller axis. For ordinary rolling and packing of the soil, hollow cast-iron cylinders are used in place of the roller disk sections, but owing to the weighting device, water need not be used for adding to the weight. However, while in the case of the American models the driver's seat is placed on springs or other shock-absorbing devices, this new model in its very nature exposes the driver to jolting that increases as he shifts his seat farther outward from the roller axis. The frame of the machine is made of wood and is hung on two wooden wheels. The maximum weighting attainable with this arrangement is about 1,000 kilos. The machine was quoted for domestic sales at 1,070,000 paper marks (about $53 at the time). The idea of breaking up the clod and packing the soil at the same time seems to be quite new in Germany, and consequently considerable interest was attracted by the machine.

IMPROVEMENT IN CZECHO-SLOVAK IMPLEMENT INDUSTRY.

Trade Commissioner H. Lawrence Groves, Prague.

Exports of implements from Czechoslovakia in the latter part of 1922 were negligible because of the inability of the domestic manufacturers of farm machinery to compete with German, Swedish, French, and other European manufacturers. Competitive conditions are now becoming somewhat more favorable, owing to the reduction of production costs and to advancing costs in foreign markets, and the local manufacturers are now beginning to feel that they can export their products to various markets such as France, Italy, Spain, as well as the Balkan States and South America.

The Czecho-Slovak Association of Implement Manufacturers has recently sent representatives to Argentina and Brazil to study the possibilities of exporting to those markets, and the Government is active in negotiating commercial treaties with the principal European countries and expects through these treaties to gain some advantage for the export of agricultural implements as well as other products. In 1922 negotiations were conducted with representatives of the Russian Soviet Government which aroused hopes of marketing large quantities of implements in Russia, but the results of these negotiations have been negligible, so far as actual business is concerned.

Until April 1 the Czecho-Slovak iron producers granted the agricultural-machinery manufacturers the equivalent of a reduction of 40 crowns per hundred kilos on bar iron and 19 crowns per hundred kilos on raw iron (1 crown=$0.02988). It is now reported that the iron producers have withdrawn this reduction because of the increased demand and higher prices for iron. The implement manufacturers have complained against this action, and the Government on their behalf is threatening to place iron subject to export licenses in case the action of the iron producers is not reconsidered.

Czechoslovakia is still a closed market for American implements because of the refusal of the Government to grant import licenses, and on account of the high customs tariffs on agricultural machinery. At present there does not appear to be any prospect of a change in this situation.

Additional information regarding agricultural implements appears in this issue under the following sections:

Cable review, Latin America:
Brazilian market for agricultural implements weak.
Active market in Argentina for agricultural implements.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

UNITED STATES EXPORTS OF BOOTS AND SHOES INCREASING.

Exports of leather boots and shoes from the United States during April totaled 5,210,785 pairs, and exceeded similar exports for any preceding month of the year. As compared with statistics for April, 1922, an increase of 100.2 per cent is shown in shipments of men's shoes; 16.9 per cent in women's; and 105.9 per cent in children's. In April encouraging market conditions for men's shoes were noted in the United Kingdom, Canada, Dominican Republic, Peru, Philippine Islands, and Cuba; for women's shoes, the United Kingdom, Panama, Mexico, Newfoundland, and Labrador, Dominican Republic, British South Africa, and Cuba; and for children's shoes, in Panama, Mexico, Dominican Republic, and Cuba.

The following table shows the principal countries of destination of the leather boots and shoes exported by the United States during April, 1922 and 1923:

United States exports of leather boots and shoes.

Countries of destination.	April—		Countries of destination.	April—	
	1922	1923		1922	1923
MEN'S AND BOYS'.	*Pairs.*	*Pairs.*	WOMEN'S—contd.	*Pairs.*	*Pairs.*
France	464	2,036	Mexico	14,700	17,720
United Kingdom	1,772	8,335	Newfoundland and Labrador	8,106	12,100
Canada	5,320	8,777	Jamaica	13,526	6,435
Honduras	5,818	2,388	Cuba	78,812	96,292
Panama	6,914	4,713	Dominican Republic	9,182	13,747
Mexico	30,929	27,876	Other West Indies	7,613	5,999
Jamaica	3,998	2,900	British South Africa	1,146	4,630
Cuba	59,941	176,988	Other countries	7,704	6,499
Dominican Republic	6,257	7,668			
Peru	24	779	Total	209,307	244,670
Philippine Islands	443	2,489			
Other countries	22,679	44,464	CHILDREN'S.		
Total	144,559	289,413	Europe	936	2,438
			Panama	2,047	3,934
WOMEN'S.			Mexico	2,982	3,464

France	612	1,890	Cuba	80,899	189,586
United Kingdom	8,647	22,328	Dominican Republic	1,948	9,538
Canada	44,536	38,708	Other countries	14,737	11,023
Panama	4,691	7,160			
Other Central America	4,456	7,746	Total	109,044	224,551

It is also noted that the shipments of slippers to foreign countries in April, 1923, amounted to 17,618 pairs, as compared with 6,622 pairs exported April of 1922. March, however, with exportation of 20,412 pairs, attained the volume peak thus far in 1923.

ENCOURAGING TRADE IN MANUFACTURED LEATHER GOODS.

During April, 1923, the United States exported 109,179 pounds of harness and saddlery, valued at $52,573, as compared with 40,396 pounds, valued at $17,944, during April, 1922.

Shipments of leather gloves from the United States in April, 1923, amounted to 2,049 dozen pairs, as against 505 dozen pairs of April, last year.

It is interesting to note that 55,003 pocketbooks were shipped abroad during April of this year, or approximately 11,000 more than the foreign countries required during April, 1922.

There were 4,914 pairs of athletic (leather) and similar sport shoes, valued at $9,085, exported by the United States during April of 1923, and 9,714 leather bags, valued at $21,946.

Increase in Leather Belting Exports.

The volume of the United States exports of leather belting in April, 1923, reached 98,501 pounds, which was more than one and one-half times greater than the quantity exported in January, and exceeded that of April, 1922, by 12,292 pounds. As compared with the corresponding month of 1922, it is noted that in April, 1923, shipments to Mexico doubled; those to British India increased to 28,240 pounds from 16,507; and the South American consignments also show a large increase. The United Kingdom, China, and Japan, however, received smaller quantities than during April, 1922.

The following table gives the principal countries of destination and the number of pounds of leather belting exported by the United States to these countries during April, 1922 and 1923:

United States exports of leather belting.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

TAXATION OF FOREIGNERS DOING BUSINESS IN HAITI.

Consul Damon C. Woods, Cape Haitien.

All citizens or subjects of foreign countries who pursue industrial, mercantile, or professional vocations in Haiti must pay annual license fees to the commune in which they are located and to the National Government. The law prescribing the State license taxes was published in the official Moniteur of August 11, 1917, and has been in effect since that date. Its application is intrusted to the minister of finance, who is assisted by the local administrateurs de finance. The amount of the tax in each instance is computed by dividing the patente, or communal license fee, by four gold. This means that the patente, expressed in gourdes (5 to $1) is divided by four and the quotient taken as American gold dollars. The State fee is therefore equivalent to five-fourths of the communal fee. Both may vary in the different communes.

According to the law cited, the tax is levied upon each establishment in which there is conducted a separate commercial enterprise. Thus, for example, one owning a general importing house and an adjoining garage must pay two sets of taxes. It is forbidden to conduct in the same establishment two or more industries or professions subject to different classifications. In addition to the principal license taxes assessed, each foreign bookkeeper or clerk must pay substantial annual fees to State and commune. Each holder of a power of attorney from a foreign concern must pay a tax equivalent to that paid by a bookkeeper.

Sums Payable Annually by Foreigners.

The sums annually payable by foreigners as patentes and droits de license in the commune of Cape Haitien are given in the following table, the amounts being expressed in American currency:

Annual taxes paid by foreigners in Haiti.

Items.	Patente, payable to commune.	Revenue stamp.	Droit de license, payable to administrateur de finance.
Ordinary merchant's license fee (payable also by Haitians)	$9.00	$0.40	.....
License to engage in business or profession	50.00	2.00	$62.50
Steamship agency	60.00	2.00	75.00
Additional tax payable by manufacturers of:			
Liquors	3.00	.07	3.75
Bread	12.00	.27	15.00
Carbonated beverages	10.00	.27	12.50
Ice	60.00	2.00	75.00
Amount payable by bookkeeper or holder of power of attorney	16.00	.27	20.00
Annual fee of clerk	8.00	.27	10.00

With the one exception noted, that of ordinary merchant's license fee, no license taxes are assessed upon Haitians engaged in commerce or industry. The license taxes assessed by the State must be satisfied between October 1 and 20 of each year, under a penalty of five times the tax due. A second offense will cause the penalty to be ten times the assessed tax and will involve the closing of the delinquent's place of business.

Commercial-Income or Net-Profits Tax Law.

The commercial-income or net-profits tax law, now applied in Haiti, was enacted originally on August 27, 1913, but was not put into effect until October, 1921. According to the law as now enforced, each merchant must annually submit his balance sheet to the Ministry of Finances and must pay a tax upon the net profits shown for the preceding year at the rate of 2 per cent if a Haitian and 4 per cent if a foreigner. If, for any reason, the merchant prefers not to submit this statement he may satisfy his obligation to the State by paying 4 per cent of five times the annual rental of his business premises, or 2 per cent of such amount if he is a citizen. It is said that the majority of merchants prefer the latter method of payment.

As regards foreign corporations and foreign unincorporated commercial societies carrying on mercantile or industrial enterprises in Haiti, the income tax is based on the net profits of the establishments, branches, and agencies situated in the Haitian Republic, without deduction of interest and dividends. The balance sheet for the preceding year should be deposited at the Ministry of Finance within 60 days following the close of the fiscal year, or within 30 days after its approval by the general assembly of the stockholders. The tax due should be paid within 30 days following the meeting of the stockholders at which the interest and dividends are fixed.

Latvian Law Regarding the Settlement of Old Debts.

Trade Commissioner Carl J. Mayer, Riga, April 28.

According to the Latvian law of March 18, 1923, debts concluded in Russian or German currency, and which must by law or by agreement be fulfilled in Latvia, are to be paid in Latvian currency on the following basis: If the contract was made before January 1, 1918, they must be paid at the rate of 1.5 Russian rubles equal 1.5 German or Ost marks and 0.02 lat; if the contract was made after January 1, 1918, they shall be paid at the rate of 2 Russian rubles equal 2 German or Ost marks and 0.02 lat. These regulations do not apply to debts which already have been paid.

Settlement of Debts Contracted Before March 18, 1920.

Contracts which were entered into before the enforcement of the law, and which provide for the conclusion of a formal contract expressed in terms of foreign currency, are not binding, with the exception of such agreements as already have been actually completely fulfilled by both sides and the cases mentioned

in paragraph 2 of the law. This paragraph provides that old contracts in foreign currency must be fulfilled in the currency foreseen therein, if they refer to transactions concerning foreign export and import, operations of credit institutions with concerns abroad, money-changing transactions, or those which must be fulfilled abroad. If the contract was made after January 1, 1918, in Russian currency, the calculation and settlement are at the rate of 2 Russian rubles equal 0.02 lat.

In the course of two years after March 18, 1923, the debtor may settle fully or in part all monetary demands arising up to March 18, 1920, including hypothecary demands, but excluding periodical allowances and life rents, as well as rental and lease demands, according to the term fixed in the law and independent of the notice of the debt. If, however, the creditor refuses to accept payment, or if his address is not known to the debtor, or his place of residence not obtainable, or if the creditor is unable to issue to the debtor the respective debt documents, the debtor is entitled to settle his debt, with due consideration of the circumstances, in the manner provided for in article 2047 of the civil process law or in article 2083 of the same law, and in the following articles, whereby the publication term stipulated in article 2061 of the same law is of one month's duration.

All papers of value as obligations, mortgage documents, partnerships, and share certificates issued in Latvia must be redrafted in the manner stipulated by the Minister of Finance and in the time and in Latvian currency as determined by the minister. All of these papers of value must be printed and prepared in the Latvian Government Printing Office. This law, effective March 18, 1923, cancels all preceding laws in this connection.

Laws Affecting Foreign Trading in Northern Territory of Australia.

Vice Consul Ray Fox, Melbourne, March 19.

The laws of the Commonwealth of Australia relating to the registration of companies in the Northern Territory have now been issued in the form of an ordinance (No. 1 of 1923) and published in the Commonwealth of Australia Gazette of February 15, 1923 (No. 11). The ordinance, which is known as the Registration of Firms Ordinance, 1923, defines as a "foreign firm" any firm registered in any country not a part of the British Empire and states that "registration," as used in its provisions, includes the filing or lodging of any document, or the taking of any step, which is required to be filed, lodged, or taken before a firm can trade or carry on business in the Territory. The Registration of Firms Act, 1899, of the State of South Australia still applies, subject, however, to the new ordinance.

Scetions 5, 6, and 7 of the ordinance of 1923 relate to the registration of foreign firms. These provide in substance that any person shall be guilty of an offense, subject to fine or imprisonment, who, without the consent in writing of the administrator, attempts to register any firm, or to name or change the name or constitution of any firm, any of the partners or members of which are not natural-born British subjects; or to register any foreign firm, or any firm, any of the capital of which has been suscribed by or on behalf of persons ordinarily residing or carrying on business outside of the British Empire; or any firm whose principal object is the carrying on of manufacturing, mining, or other industrial operations outside the Commonwealth or any territory of or under the control of the Commonwealth.

A penalty is also provided for any person or firm that, without the required written permission, transfers or disposes of the assets (other than stock in trade) of any firm registered in the Territory to any person or body of persons ordinarily residing or carrying on business outside of the British Empire.

The administrator has the absolute right to use his discretion in refusing or consenting to any application made under this ordinance, and if he grant such consent he may attach whatever conditions he may think fit.

Where any business name under which the business of a firm or individual is carried on contains the word "British" or any other word which, in the opinion of the administrator is calculated to lead to the belief that the business is under the ownership or control of British subjects, and the administrator is satisfied that the nationality of the persons by whom the business is wholly or mainly owned or controlled is at any time such that the name is misleading, the administrator shall refuse to consent to the registration of such business name or, as the case may be, cause such business name to be removed from the register, but any person aggrieved by a decision of the administrator under this provision may appeal to the minister, whose decision shall be final.

[A complete text of the ordinance is on file in Division of Commercial Laws, Washington, D. C., and may be had upon application by referring to file No. 92426.]

Increase in Certain Peruvian Taxes.

Acting Commercial Attaché W. E. Dunn, Lima, April 28.

The recent session of the Peruvian Congress passed a law, effective April 2, increasing the taxes known as "impuesto de capital movible" and "impuesto de patentes." Article 1 of the new act provides that the tax levied on income from movable capital, as determined by the laws of May 20, 1879, and November 15, 1888, is increased to 6 per cent. Article 2 states that in like manner the patente tax in the Provinces of Lima and Callao, formerly 5 per cent, is increased to 7 per cent.

The term "capital movible" is applied to flotations of bonds and similar financial operations. When such an issue is made, the Government charges 6 per cent on the amount of capital involved in the transaction. The patente tax is a profits tax levied on the business done by business establishments of all kinds, professions, etc. Each firm or individual is assessed according to the estimated profits of the business each year. In making the estimation the Government usually accepts the statement of the firm, provided this statement is not obviously false.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

VOLUME OF FOREIGN TRADE THROUGH COASTAL CUSTOMS DISTRICT.

F. E. Benjamin, Transportation Division.

[The volume of oversea commerce of the United States by principal foreign-trade regions was discussed in COMMERCE REPORTS of May 14 (p. 456). The following article presents a brief analysis of our import and export traffic for each of the coastal customs districts for the calendar years 1920 and 1921.]

The outstanding changes in the foreign trade of the various customs districts in 1921, as compared with 1920, include the shift in the relative rank of several of the Atlantic coast districts and the increase, both absolute and relative, in the commerce handled by the three Gulf districts, New Orleans, Galveston, and Sabine. The sharp falling off in coal exports mainly accounts for the decline in the trade of the Atlantic districts in question, and the increase in miscellaneous exports at New Orleans and Galveston and in oil imports at Sabine accounts for the growth in the total commerce of these districts from 17,295,000 long tons in 1920 to 20,552,000 tons in 1921.

Statistics of Import and Export, 1920 and 1921.

A table showing the volume of the imports and exports at each of the 21 coastal districts in 1920 and 1921 and their rank in each of the two years is given below.[1]

Foreign trade of United States through customs districts during 1921, compared with 1920.

1921.

Customs districts.	Imports.	Exports.	Total.	Rank.
	Long tons.	*Long tons.*	*Long tons.*	
New York	8,989,000	7,592,000	16,581,000	1
New Orleans	4,493,000	4,771,000	9,264,000	2
Virginia	237,000	5,901,000	6,138,000	3
Galveston	2,280,000	3,848,000	6,128,000	4
Maryland	2,425,000	3,303,000	5,728,000	5
Philadelphia	2,870,000	2,406,000	5,276,000	6
Sabine	2,876,000	2,284,000	5,160,000	7
Massachusetts	2,441,000	258,000	2,699,000	8
Florida	590,000	1,262,000	1,852,000	9
San Francisco	600,000	1,228,000	1,828,000	10
Washington	875,000	935,000	1,810,000	11
Georgia	211,000	1,100,000	1,311,000	12
Maine and New Hampshire	913,000	95,000	1,008,000	13
Oregon	33,000	914,000	947,000	14
Rhode Island	775,000		775,000	15
Mobile	219,000	477,000	696,000	16
South Carolina	335,000	358,000	693,000	17
Los Angeles	198,000	302,000	500,000	18
North Carolina	52,000	23,000	75,000	19
San Diego	23,000	24,000	47,000	20
Connecticut	19,000	17,000	36,000	21
Total	31,454,000	37,098,000	68,552,000	

[1] The figures here presented differ from those in the previous article by the inclusion of statistics of our water-borne trade with Canada. They also differ from the statistics compiled by the Shipping Board and previously published in COMMERCE REPORTS. The latter credited outgoing cargoes to the last port of call and incoming cargoes to the first port of entry of the carrying ship, irrespective of the quantity of goods loaded or unloaded, while the figures in this article show the volume of imports and exports actually entered and cleared through the specified customs districts; in addition, Shipping Board figures are by individual port and on the fiscal year basis, while these are for the calendar year and are by customs districts, which usually include several ports. These differences in basis of compilation make a direct comparison of the two sets of data impossible, and account for any apparent conflicts that may occur.

Foreign trade of United States through customs districts during 1921, compared with 1920—Continued.

1920.

Customs districts.	Imports.	Exports.	Total.	Rank.
New York	9,955,000	10,527,000	20,482,000	1
New Orleans	4,166,000	3,905,000	8,071,000	5
Virginia	310,000	11,766,000	12,076,000	2
Galveston	2,495,000	2,404,000	4,899,000	6
Maryland	3,555,000	8,376,000	11,931,000	3
Philadelphia	3,167,000	4,937,000	8,104,000	4
Sabine	1,787,000	2,538,000	4,325,000	7
Massachusetts	1,525,000	422,000	1,947,000	12
Florida	934,000	1,987,000	2,921,000	8

Washington	993,000	1,179,000	2,172,000	10
Georgia	643,000	1,425,000	2,068,000	11
Maine and New Hampshire	1,128,000	192,000	1,320,000	13
Oregon	36,000	749,000	785,000	16
Rhode Island	643,000		643,000	17
Mobile	319,000	748,000	1,067,000	15
South Carolina	548,000	677,000	1,225,000	14
Los Angeles	97,000	370,000	467,000	18
North Carolina	255,000	26,000	281,000	19
San Diego	18,000	33,000	51,000	20
Connecticut	19,000	19,000	38,000	21
Total	33,502,000	54,186,000	87,688,000	

Among the eight leading districts, Galveston, New Orleans, and Sabine, on the Gulf, and Massachusetts showed increases in 1921.

Shift in Rank of Principal Districts.

The New York customs district, standing first in both years, lost considerable of its lead in 1921, although its foreign commerce in the latter year was 24 per cent of the total water-borne trade and practically 80 per cent greater than that of New Orleans, which ranked second in 1921. The decline in New York's foreign trade is accounted for partly by a decrease in exports—of coal, by 270,000 long tons; of illuminating oil, by 324,000 tons; of rye, by 430,000 tons; and of hydraulic cement, by 295,000 tons.

New Orleans rose from fifth place in 1920 to second place in 1921, owing largely to an increase of 860,000 long tons in its exports, as well as to a decrease in coal exports from the ports which outranked it in the preceding year. Its commerce constituted 13 per cent of the total for the districts enumerated. The principal increases in outgoing cargo tonnages from this district were in gas and fuel oil and in corn, amounting to 300,000 and 318,000 tons, respectively. Naphthas, crude mineral oil, and rice also helped to increase the volume of New Orleans exports. The trade of New Orleans is less fluctuating in volume than that of some of the other districts which include large coal-exporting ports or which are dependent on two or three commodities for the bulk of their commerce.

Virginia Drops and Galveston Rises in 1921.

Virginia moved from second to third place among the districts as a result of the decline in coal exports from the United States in 1921. In the district of Virginia alone this decline amounted to 5,300,000 long tons, and is accounted for chiefly by the settlement of England's mine labor troubles. Because of heavy coal exports, the trade of Virginia is decidedly unbalanced, imports being relatively unimportant in volume. In 1921 the Virginia customs district ranked fifteenth among those specified on the basis of import volume.

Galveston, which was sixth in 1920, rose to fourth place among the coastal customs districts in 1921, handling 8.9 per cent of total water-borne foreign trade of the United States, or practically as much as Virginia. Imports into Galveston remained fairly steady, but exports increased by almost 1,500,000 tons. Wheat shipments, mainly to Europe, accounted for most of this increase, but shipments of cotton, cottonseed cake, corn, rye, and sulphur also contributed to the greater total of Galveston's trade in 1921.

Philadelphia and Maryland Lost Through Coal Exports.

The tonnage passing through the Philadelphia district declined over 2,800,000 long tons, most of this resulting from a drop in exports. Coal exports, constituting almost half of the outbound tonnage in 1920 and only one fourth in 1921, declined 1,800,000 long tons; lubricating oils, 208,000 tons; and illuminating oil, 186,000 tons.

To the 50 per cent decline which occurred in the foreign trade of Maryland in 1921, coal contributed approximately 4,360,000 long tons, corn 470,000 tons, wheat 223,000 tons, and rye 185,000 tons. Like the falling off in Virginia's foreign trade, this resulted largely from the fact that coal is so important a part of Baltimore's commerce. The decline of approximately 1,000,000 long tons in imports into Maryland in 1921 is accounted for in part by a decrease of 591,000 tons in iron ore imports, mainly from Cuba, and decreases of smaller amounts in imports of crude mineral oil, manganese ore, soda nitrate, and copper ore.

Sabine and Massachusetts Increased Import Trade.

Sabine, ranking close to Maryland, showed an increase in volume of foreign trade in 1921. Receipts of mineral oil from Mexico practically doubled and constituted a large factor in Sabine's commerce.

The customs district of Massachusetts, whose foreign trade likewise increased in 1921 over 1920, has a much greater volume of imports than exports. The growth in incoming tonnage reflects a general increase in receipts for most of the commodities imported through this port, but particularly for mineral oil, bananas, cane sugar, burlap, and jute.

Other Districts—Florida and Pacific Coast.

The combined foreign trade of the 13 remaining customs districts constituted less than 20 per cent of the total in both 1920 and 1921, although seven of them in 1920 and five of them in 1921 had a total volume of foreign trade of more than 1,000,000 long tons. Florida, ranking next to Massachusetts in 1921, is more important in exports than in imports. Large amounts of land pebble, high-grade rock, and lumber are shipped from this district to foreign regions. Crude mineral oil constitutes the chief import into Florida, receipts in 1921 amounting to 475,000 long tons.

The Pacific coast districts, San Francisco, Washington, Oregon, Los Angeles, and San Diego, together handled 6,290,000 tons of exports and imports in 1920 and 5,535,000 tons in 1921. San Francisco's foreign trade was the largest among these districts, although the volume of imports into Washington was greater in both years than into San Francisco. In 1921 San Francisco exported 346,000 tons of barley, 539,000 tons of mineral oils, and 39,000 tons of rice, and imported 83,000 tons of crude mineral oil, 77,000 tons of bituminous coal, 59,000 tons of coffee, 58,000 tons of copra, and 39,000 tons of beans.

The largest single item in exports from Washington in 1921 was fir boards, shipments of which amounted to 344,000 long tons. Wheat and wheat flour exports totaled 259,000 tons, and cotton 27,000 tons, in the same year. Imports into Washington in 1921 included 310,000 tons of coal, 128,000 tons of logs and round timbers, 106,000 tons of copper concentrates, and 79,000 tons of copper ore.

The principal exports from Oregon are wheat and wheat flour and lumber products. The former, in 1921, amounted to 633,000 long tons and the latter to 252,000 tons. The volume of imports is relatively unimportant.

Exports from Los Angeles are mainly petroleum products; the increase in imports by 100 per cent in 1921 was almost entirely the result of greater receipts of crude mineral oil.

San Diego became a separate customs district in March, 1920. The volume of its trade is still small, although it exceeded that of Connecticut in both 1920 and 1921.

Rhode Island, Mobile, and South Carolina.

Rhode Island's foreign trade consisted entirely of imports in both years, practically all of which was crude mineral oil, with smaller amounts of benzine and other refined mineral oils.

The foreign trade of Mobile, including considerable quantities of lumber and steel exports, declined in 1921 about one-third below the 1920 level. Mobile's principal imports are bananas, molasses, manganese ore, asphalt, and clay; bananas constituted practically 35 per cent of the district's import volume in 1921.

Coal is the chief export, and mineral oil the chief import, of the South Carolina customs district. In 1921 bituminous coal exports amounted to 280,000 long tons, and imports of crude mineral oil to 268,000 tons. A decline in total trade of 43 per cent was recorded.

North Carolina's only export in 1921 consisted of 23,000 tons of cotton. There was imported into this district 39,000 tons of nitrate of soda.

C. I. F. Shipments to Chile.

Assistant Trade Commissioner W. E. Embry, Santiago, April 14.

The standard shipping terms adopted March 28 by the International Chamber of Commerce at Valparaiso make no mention, in the case of c. i. f. quotations, of the inclusion of consular charges. This is a subject which has given rise to no little controversy in Chile, owing to the fact that these charges are rather heavy; the consular fee for an invoice value up to $200 is $5, while invoice values in excess of this amount must pay at the rate of 1¼ per cent. It would therefore seem advisable for exporters to quote prices "c. i. f. (port), consular fees paid," or "c. i. f. (port), consular fees for account of consignee."

[A copy of the shipping terms in question (in Spanish) may be borrowed from the Transportation Division by interested persons.]

Port and Shipping Notes.

South African Coal for Germany.

Certain German steamship companies engaged in trade with South Africa have decided to employ several of their vessels in carrying coal from Port Natal (Durban) to Hamburg, according to Industrie und Handels Zeitung of April 6. The first of these shipments was due to arrive at Hamburg the middle of April. (Consul E. Verne Richardson, Berlin, April 9.)

Repair Work in Halifax Shipyards.

With ships coming into Halifax almost daily for repair work, the Halifax shipyards are enjoying a season of increased activity. On a recent date work was under way on nine steamers at the Halifax side of the harbor and six more were in the cradles of the company's plant on the Dartmouth side. Employees in the two plants number 250 at present. (Consul General Edwin N. Gunsaulus, Halifax, May 9.)

Failure of Mocha Light.

The Mocha Light on the Arabian coast of the Red Sea has ceased to function, according to an American yacht which arrived in Port Said March 8. The light, which, according to the charts is about 40 miles northeast of Perim Island on the Arabian coast and is supposed to be visible for 12 miles, has been extinguished for some time. (Consul Coert duBois, Port Said, Egypt.)

New Light on Bahaman Coast.

Announcement is made of the establishment of a light at the Bluff, North Bimini, Bahamas, in approximately latitude 25° 43′ 30″ N., longitude 79° 19′ 30″ W. The light is white, is a fixed one, and is a masthead lamp on a skeleton wooden tower painted white. The height above sea level is about 60 feet, and the light should be visible for 10 miles in clear weather. (Consul Lorin A. Lathrop, Nassau, April 11.)

Spanish Service to South American West Coast.

The Compañia Trasatlantica announces the extension of its service, hitherto to Colon and Caribbean ports only, through the Panama Canal and as far south as Valparaiso. Stops will be made at Guayaquil, Callao, Mollendo, Iquique, and Antofagasta. The only change in the return route is that ships will not touch at Habana, but after calling at Porto Rico will return to their home ports via the Canary Islands. The first sailings were scheduled from Barcelona for April 10 and from Cadiz for April 15. (Vice Consul Roy W. Baker, Barcelona.)

Enlargement of Norwegian Shipyard's Floating Dock.

The Porsgrunds Mekaniske Verksted at Porsgrund, Norway, has commenced work for the enlargement of its floating dock from a lifting capacity of 3,500 to 4,500 tons. The work will be pushed as workmen are available, and it is expected that work will be completed by the end of 1923. The present dock will still be used, the prolongation being attached to the original dock when completed. (Assistant Trade Commissioner H. Sorensen, Copenhagen, April 19.)

New Service Between Bremen and Goole.

A regular weekly freight service between Bremen and Goole, England, by the Argo Steamship Co. of Bremen, was scheduled to commence May 1. Two steamers, the *Ibis* and the *Grandon*, will leave Bremen every Friday and will sail from Goole every Wednesday. This new service is an augmentation of an established service by the same company between Bremen and Humber River ports. (Vice Consul Albert W. Scott, Hull, England, April 23.)

Bergen Steamship Co. Buys New Vessels.

A motor ship of 6,500 tons and a steamship of 4,200 tons were scheduled to be launched at Copenhagen in May for the Bergen Steamship Co. Two smaller steamers of 600 tons each, which the Bergen Steamship Co. purchased from a Danzig shipbuilding company in April, have been named the *Clio* and the *Pallas*. They will be operated on the coast route between Bergen and Tromso. (Consul George Nicolas Ifft, Bergen, April 21.)

Norwegian Steamship Company Increases Capital.

At a combined meeting of the management and shareholders of the Bergenske Dampskibsselskap, Bergen, it was decided to issue new capital in the amount of 3,500,000 crowns, thus raising the share capital from 14,000,000 to 17,500,000 crowns. The new shares will be issued at 105 per cent. The company owns a fleet of 45 motor and steam ships, aggregating over 60,000 dead-weight tons. (Assistant Trade Commissioner H. Sorensen, Copenhagen, April 21.)

Service to Labrador Goldfields.

As a result of negotiations which have been in progress for several weeks, it is reported that a contract has been entered into by the Labrador Goldfields (Ltd.) with steamship owners of Sydney, Nova Scotia, for the transportation of 5,000 men and 100,000 tons of freight from Sydney to the northern gold fields. Four steamers are to be put into the service from Syd-

ney, New York, and Boston for Stage Bay in Northern Labrador, where a gold camp is to be established during the coming summer. (Consul General Edwin N. Gunsaulus, Halifax, Nova Scotia, April 7.)

Proposed Lubeck-Danzig Passenger and Freight Service.

The Hanseatische Dampfschiffahrts Gesellschaft (Hanseatic Steamship Co.) of Lubeck plans to establish a regular service between Lubeck and Danzig, in addition to its present service to Reval and Petrograd. Sailings will be at intervals of about 10 days at the outset. Both passengers and freight will be carried. The steamers operating on the Lubeck-Reval line have not been calling at Danzig for some time past, but have continued from Reval to Finland, where they have obtained full cargoes. (Consul Charles H. Albrecht, Danzig, April 17.)

Mergers in German Shipping Circles.

The Hamburg American Line and the Argo Steamship Co., of Bremen, will inaugurate a service to the Levant in the near future, according to recent reports from Hamburg and Bremen. Considerable significance is attached to the cooperation of the two lines, as it brings into closer relationship the Norddeutscher Lloyd, of Bremen, and the Hamburg American Line. As the Roland Line, of Bremen, which is connected with the North German Lloyd, fused with the Argo Line during the past year, it is intimated that there is a still greater interlocking agreement in German shipping circles. (Office of the commercial attaché, Berlin, April 14.)

Freight Service, Antwerp to Danish and Baltic Ports.

The United Steamship Co. is operating a three-day direct freight service between Antwerp and Copenhagen with two vessels, the *Vena* (12,000 dead-weight tons), and the *Saga* (15,000 dead-weight tons). The boats can accommodate a small number of passengers. Five other vessels of the line, of from 2,600 to 3,000 dead-weight tons, are operating in the freight trade between Antwerp and Aarhus, Aalborg, Middelfart, Odense, Randers, and thence to Riga and Reval and back to Antwerp via the Kiel Canal. The vessels also touch at Libau and Windau when freight is offered to or from those ports. (Consul General Marion Letcher, Copenhagen, Denmark, April 14.)

Additional information regarding shipping appears in this issue under the following sections:

Cable review, Latin America: Reduced freight rates from Chile.
Cable review, Far East: Reduced passenger rates from Singapore to London and Marseille.

RAILWAYS.

Freight Rates on British Railways Reduced.

Assistant Trade Commissioner H. B. Allin Smith, London, April 20.

British railway freight rates were materially reduced, effective May 1. From that date no freight traffic will pay higher than 60 per cent above pre-war levels, with the single exception of small parcels, which will be carried at rates 75 per cent higher than in 1914.

Agriculture is the chief industry to benefit by the new reductions. Charges were lowered from 75 per cent above pre-war rates to 50 per cent above on agricultural machinery and implements, grains, hay, hops, vegetables, seeds, cattle feeds, dairy and poultry products, and fruit.

Rates on live stock and parcels carried by passenger train were reduced to a uniform rate of 50 per cent above that of 1914. Charges on all general merchandise by goods (freight) trains were reduced from 75 per cent to 60 per cent, except in the case of heavy commodities, which had been previously benefited by freight cuts. This leaves coal, coke, and other fuel, raw materials for blast furnaces and steelworks and their finished products at between 40 and 60 per cent above 1914, as fixed by concessions late in 1922. A cartage charge of 9d. per ton has been abolished.

Proposed Railway Construction in Latvia.

Trade Commissioner Carl J. Mayer, Riga, April 15.

The Latvian railway administration has drafted three projects for the connection of Libau and Riga by rail. The first plan proposes to unite the Libau and Tuckum-Riga lines; the second, to unite the same lines via Hasenpoth; and the third, to connect Riga and Libau via Hasenpoth, Livbersen, and Mitau. The estimated cost of these projects is 10,500,000 gold rubles (the ruble equals $0.5146).

It is also proposed to construct a narrow-gauge line from Riga to Limbashi and Ruyen, in order to unite Riga with the Haynash-Smilten and Esthonian narrow-gauge lines. This project is estimated to cost 3,057,000 gold rubles.

The stock company owning the Smilten-Haynash line has applied to the Government for the restitution of a concession which was granted in 1912 for a period of 81 years. The war years have been deducted from the concession term so that the company's rights are to expire after 77 years. The share company—in which the principal stockholders are British—is converting itself into a Latvian enterprise with a capital of 560,000 lats (1 lat=1 gold franc). This line has sustained heavy losses; nearly all the rolling stock has been lost and will now have to be replaced. The ministry of finance has transmitted to the cabinet the request for renewal of this concession.

Railway construction in Peru.

COMMUNICATIONS.

Air Service, Danzig-Berlin.

Vice Consul Howard A. Bowman, Danzig, April 20.

The daily round-trip air service between Danzig and Berlin, with Koenigsberg as terminus, was scheduled to open for the season on April 30. The time between the two points has been shortened to three and one-half hours by the elimination of a landing at Stettin. The service from Danzig to Berlin is about one-half hour longer than the return trip, because of unfavorable air currents.

The fare between Danzig and Berlin is 150,000 German marks ($3.45 at exchange rate of May 15). This compares with the 8-hour rail trip from Danzig to Berlin, costing 50,000 marks ($1.15) for a first-class ticket, with sleeping accommodations at 44,000 marks ($1.11) extra. The use of the airplane obviates the necessity for a Polish visa and represents a saving of $2 in the case of an American citizen. The fare from Danzig to Koenigsberg is 50,000 marks ($1.15); from Berlin to Koenigsberg direct, 160,000 marks ($3.68). Each passenger may take 5 kilos of baggage free of charge. Freight in packages not exceeding 60 by 60 by 60 centimeters is also accepted at a rate of 2,000 marks per kilo for the Berlin-Danzig route and of 750 marks per kilo for the Danzig-Koenigsberg route.

The air service between Berlin, Hamburg, Bremen, and London was also scheduled to open April 30, thus making it possible to fly from Danzig to London in 12 hours.

Annual Report of the Great Northern Telegraph Co.

Assistant Trade Commissioner H. Sorensen, Copenhagen, April 17.

It is announced that the Great Northern Telegraph Co. of Denmark would propose, at the general meeting on May 31, that a dividend of 22 per cent be paid for the year 1922, including the 5 per cent already paid; further, that 600,000 crowns be transferred to the reserves, 1,000,000 to the pension fund, and the remainder—5,575,712 crowns—be carried forward to next year's accounts.

The financial result for 1922 is about the same as for 1921, the profits amounting to approximately 8,000,000 crowns. The dividend declared last year was also 22 per cent. The share capital of the company is 27,000,000 crowns, so that 5,940,000 crowns have been set aside to pay the 22 per cent dividend.

It was reported recently that regular working with Vladivostok via the company's lines has been reestablished after an interruption of several years.

Danish Postal Service Operates with Surplus.

Assistant Trade Commissioner H. Sorensen, Copenhagen, April 17.

The Danish postal service announces that a preliminary survey indicates a surplus for the fiscal year ended March 31, 1923, amounting to 1,721,405 crowns. For the fiscal year 1921–22 the estimated deficit was 5,592,820 crowns.

During the fiscal year 1923 the income totaled 53,877,978 crowns, and operating expenses were 52,156,573 crowns. The corresponding figures for 1921–22 were 57,100,700 crowns and 62,693,520 crowns.

Added expenses totaling about 900,000 crowns will be incurred for the fiscal year 1922–23, and the ordinary amortizations will amount to approximately 400,000 crowns; so that the final estimated surplus for the fiscal year will be about 400,000 crowns, as contrasted with an actual deficit of about 7,000,000 crowns for the preceding year.

Postal Notes of Commercial Interest.

Parcel Post for United States Possessions and Alaska.

Recent reports show that numerous packages, including C. O. D. parcels for Alaska and the oversea possessions of the United States, are reaching the ports of dispatch in bad condition. Many of these parcels are damaged before they reach the ships, making it plain that they have been so poorly prepared for shipment that they can not stand the journey to the seacoast. Where transfers of this kind are involved it is very important that special care should be given the packing and wrapping of parcels, since in most cases they will have to be handled on board trains, then transferred to ships, and again transferred from ships at the port of destination. Lack of care in this particular seriously injures the value of the parcel-post service.

Air Mail, Plymouth to London.

In connection with the movement to expedite American mails by landing them at Plymouth a trial of service by airplane was made between Plymouth and London on April 27. The trial proved that mails arriving by liner at Plymouth could reach London within two and one-half hours; by transfer to the air lines to the Continent they could be in Paris within seven hours after landing at Plymouth, in Brussels within five hours, and in Cologne within six hours. In all these cases the replies to urgent mails could have been made in time for the return air mail on the morning following their delivery at Plymouth. (London Post, April 28.)

Air Parcel Post, England to the Continent.

On May 1 the air parcel-post service from England to France and Holland was extended so that packages are now accepted at every branch post office in London and in every head post office in the Provinces. Parcel post for Paris has been divided into two classes—the urgent service, or express, and a new service called nonexpress. Comparative rates are as follows: Up to 2 pounds—express 1s. 9d., nonexpress 1s. 6d. (the same as ordinary post); from 2 to 5 pounds—express 3s., nonexpress 2s. 3d. (only 3d. more than by ordinary post); from 5 to 8 pounds—express 4s. 6d., nonexpress 3s. 3d.; from 8 to 11 pounds—express 6s., nonexpress 4s. 3d. (London Post, April 28.)

Additional information regarding communications appears in this issue under the following sections:

Electrical equipment: Radio development in Czechoslovakia.
Tariffs and trade regulations: Valuation certificates for parcel post to Sierra Leone.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

ESTHONIA-HUNGARY.

Minister F. W. B. Coleman, Riga, April 6.

Ratification of Commercial Treaty.

The treaty of commerce between Esthonia and Hungary which was signed October 19, 1922, was ratified on March 7, 1923. The treaty is concluded for an indefinite period, but may be denounced by either party at three months' notice. The clauses dealing with deliveries of certain goods and tariff concessions provide that goods originating in and coming from Esthonia are to enjoy the lowest Hungarian rates accorded either directly or indirectly to any third power, and this to apply not only to import duties but also to all surtaxes and coefficients and the like. The natural or manufactured goods originating in and coming from Hungary are, however, to be subject to the general tariff rate in Esthonia, without the application of most-favored-nation treatment.

Most-favored-nation treatment is accorded by each contracting party to the nationals of the other in all matters affecting industry, taxation, and the possession of property in the territory of the other. National treatment is also provided for as regards the protection of patents, designs, and trade-marks.

FRANCE-GUATEMALA.

Cable from Commercial Attaché Chester Lloyd Jones, Paris, May 13.

Treaty Granting Reciprocal Concessions in Import Duties.

The commercial treaty between France and Guatemala, signed July 28, 1922, became effective on May 8, 1923, pending ratification by the French Parliament, according to a presidential decree of May 4, published in the Journal Officiel for May 5. By this treaty, which has been modified since the signature on July 28, France grants minimum rates on 29 Guatemalan products, while Guatemala grants most-favored-nation treatment to French products, with the exception of such rates as it now accords or may in the future accord to products of the Republics of Central America. Moreover, Guatemala grants special reductions in import duties on 78 articles of French export. These reductions range from 15 per cent to total exemption from import duty.

The principal French products upon which conventional rates are established by this treaty are as follows: Wines; mineral waters; table oils; vinegar; various preserved foods, such as meats, fish, etc.; cheese and butter; biscuits, chocolate and confectionery; household utensils of porcelain and faïence; glassware for domestic use; steel, iron, copper, and aluminum household articles; soaps; toilet waters and perfumery; brushes; articles of celluloid, bone, hard rubber, and gutta-percha; leather articles; motion-picture films; jewelry; pharmaceutical specialties; various fabrics and other manufactures of cotton, wool, jute, and silk; certain agricultural apparatus; automobiles and trucks; newsprint paper and various other articles for industry.

The Guatemalan products obtaining the minimum rates of the French tariff by this treaty include rawhides, dried; raw sugar; corn and cereals; bananas; raw rubber; coffee; fine woods; mica; minerals; and a number of other typical products.

[The United States not being on a most-favored-nation basis with either nation, is not granted any of the reductions specified above.]

TARIFF CHANGES ON SPECIFIC ARTICLES.

ANGOLA.

Consul Reed Paige Clark, Loanda, March 31.

Free Admission of Disinfectants and Insecticides.

Disinfectants and insecticides imported into Angola have been exempted from the payment of import duties and other dues except the small traffic tax, according to a decree of March 16, 1923.

[Formerly the various duties and charges upon these products aggregated 35 per cent ad valorem or more.]

BELGIAN CONGO.

Consul Reed Paige Clark, Loanda, March 31.

Increased Export Duties on Ivory.

An ordinance of February 26, 1923, doubles the duties on the various classes of ivory exported from the Belgian Congo as follows:

Articles.	Former rate.	New rate.
	Francs per 100 kilos.	*Francs per 100 kilos.*
Ivory:		
Pieces	100	200
Tusks weighing less than 6 kilos each	160	320
Tusks weighing 6 kilos or more each	210	420

CANADA.

Appraisers' Bulletin No. 2764, Canadian Department of Customs and Excise, Ottawa, May 8.

Customs Decisions on Cotton Yarns, Hard Rubber Tubing, and Ships' Equipment.

The following decisions have been issued by the Canadian Department of Customs and Excise:

(1) Cotton yarns, natural and mercerized, coarser than No. 40, for the manufacture of shoe laces, are declared not entitled to entry free of duty under tariff No. 534.

(2) Hard rubber tubing, to be used in the manufacture of pipestems, declared dutiable under tariff item 618. (This tubing consists of solid rubber piping three-fourths inch in diameter with a very small hole running through the center.)

(3) Winches, windlasses, capstans, and towing engines or machines, electrically driven, are now manufactured in Canada and are therefore not entitled to free entry under tariff item 470.

Board of Trade Journal, London, May 10.

German Fabric Gloves Subject to Increased Duty Valuation.

By virtue of section 40 of the Canadian Customs Act, which provides that, in the case of importations of goods from a country whose currency is substantially depreciated, the value for duty shall not be less than the value that would be placed on similar goods manufactured or produced in the United Kingdom or in some other European country whose currency is not substantially depreciated, and, further, that the Minister of Customs may determine the value of such goods for duty purposes, the Canadian Board of Customs and Excise have appraised fabric or chamoisette gloves of German manufacture at an advance of 100 per cent on the selling prices in Germany for export, provided, however, that the goods shall not be entered at less than their true invoice value.

DENMARK.

Cablegram from Assistant Trade Commissioner H. Sorensen, Copenhagen, May 24.

Classification and Duty on Inner Tubes.

The import duty on inner tubes was not changed by the recent Danish tariff revision, as previously reported.

Inner tubes containing valves or fabric are dutiable as tubes of India rubber, gutta percha, and the like, in combination with textile materials (item 64–b) at 0.50 crown per kilo; inner tubes without valves or fabric are free of duty under item 66–b.

[Owing to an error in transmission of the cable of May 2, published in COMMERCE REPORTS for May 14, 1923, it was stated that tubes were now dutiable at 0.40 crown per kilo plus 6 per cent ad valorem.]

FINLAND.

Consul Leslie A. Davis, Helsingfors.

Changes in Customs Tariff.

The Finnish Diet has made the following changes in the import and export duties, to be operative until December 31, 1923:

Item No.	Articles.	Rate of import duty (Finnish marks per kilo).	
		Former.	New.
114	Coffee, unroasted	12.00	[1] 12.00
	Sugar:		
	Unrefined (brown or crystallized sugar)—		
118	Neither crushed nor pulverized, liquid or not, also sirup, including granulated sugar	2.00	2.50
119	Crushed or pulverized	2.30	2.80
120	Refined, of all kinds, such as sugar in regular lumps, sugar candy, loaf sugar, also crushed or powdered sugar	2.30	2.80
121	Molasses, unmixed	2.00	2.50
	Tobacco, unmanufactured:		
163	Leaves with or without stalks	30.00	25.00
164	Stalks	25.00	20.00
	Cereals:		
	Not milled—		
30	Rye, barley, buckwheat, and millet	.25	.50
32	Wheat	.75	1.00
	Milled—		
	Rye flour—		
40	Not sifted	.35	.65
41	Sifted	.40	.80
42b	Barley flour, also barley, buckwheat, and millet meal, gross weight	.45	.80
	Wheat flour:		
43	Unsifted (Graham)	.95	1.20
44	Sifted, also granulated flour	1.20	1.45

[1] This duty is unchanged, instead of having been changed to 10 marks as proposed.

The export duty on wood-pulp board (item 14) has been reduced from 4 marks to 2 marks per 100 kilos, and the export duty on paper of all kinds (item 15) has been reduced from 3 marks to 2 marks per 100 kilos. The export fees of 1.40 and 1 mark, respectively, per 100 kilos, formerly levied on pasteboard and paper in addition to the export duties, were abolished on December 1, 1922.

Authority to Advance or Reduce Basic Duties.

The State Council has been empowered during 1923 to increase the customs duties, by at most four times, on such goods as are marked in the import tariff with one star, in which are included also goods mentioned under items 520–522 (iron or steel in bars); and to decrease by at most one-third the customs duties on such goods as are marked in the customs tariff with two stars.

[See COMMERCE REPORTS for February 5, 1923, for changes made under this provision. The above article was prepared for an earlier issue of COMMERCE REPORTS, but was unfortunately crowded out for lack of space and overlooked.]

GERMANY.

Consul Orsen N. Nielsen, Berlin, April 18, 1923.

Reduction of Export Duties on Certain Commodities.

On April 12 and 13, 1923, the subcommittees on economics and export control of the Reichtswirtschaftsart (Federal Economic Council) reviewed the export control regulations and heard requests for the abolition or modification of the control.

The hearing resulted in the demand for the removal of the export control being withdrawn, under an agreement to extend the free list, a reduction in the export tax of several commodities, and authorization of a committee of the Federal Economic Council to investigate the existing system of control with a view to its possible reorganization on a more efficient basis.

The revised free list has not as yet been published. The commodities on which the export tax has been reduced are gloves, iron wire, locomotives, steam boilers, ferrochromium alloys made from imported materials, unmanufactured lead, zinc from imported raw materials, hardwood building lumber, furniture, floating cranes, and ships of all types, whether new or used.

POLAND.

Consul General L. J. Keena, Warsaw, April 20.

Increase in Duty Coefficient on Certain Commodities.

The special Polish duty coefficients applying to a large number of articles have been greatly increased by a joint order of the Ministers of Finance and Commerce, dated March 27, and published in the Journal of Laws No. 35 of April 4, 1923.

The coefficient of 10 was raised to 100 for a number of food products and some manufactures; to 500 for certain milk preparations, wood-pulp print paper, and a few other items; to 1,200 for a few items, including smoked meat and fish. The coefficient of 50 was put up to 500 for a number of articles, including heavy chemicals, machinery, and machine supplies; to 1,200 for some items, including certain electrical materials and motor trucks. The coefficient of 150 was raised to 500 for a few items, and to 1,200 for a variety of goods. A number of articles may be imported only under permit.

In part, the present advances are intended to compensate for the further depreciation of the Polish mark.

[The text of the above order is on file in the Division of Foreign Tariffs, and information concerning specific commodities will be furnished upon request. The former coefficients had been in force since April 7, 1922.]

RUMANIA.

Commercial Attaché L. E. Van Norman, Bucharest.

Duty Exemption of Oil Well Material Subject to License.

Oil well material, which has hitherto enjoyed exemption from Rumanian import duties in accordance with the special provisions of the mining law, is now exempt only by special permit from the Ministry of Finance since it is claimed that much of the material (tanks, casing, etc.) can now be manufactured in the country.

YUGOSLAVIA.

Vice Consul H. R. Brown, Belgrade, April 17 and May 3.

Reduction of Export Duties on Certain Foodstuffs and Hides.

The economic and financial committee of ministers of Yugoslavia has made the following modifications in the export tariff:

Articles.	Rate of export duty.	
	Former.	New.
	Dinars per 100 kilos.	*Dinars per 100 kilos.*
Rye	150	60
Wheat flour	110	60
Other flour	110	40
Bran	25	15
Onions and garlic	200	100
Edible oil	110	Free.
Cattle and calves' hides	1,000	400
Dried kid and lamb skins	800	400
Oak railway ties, over 270 centimeters in length, after Apr. 27, 1923, each	(1)	15

[1] Formerly one-third of all such ties had to be given to the State, loaded on cars at the place where the shipment for exportation was assembled.

CUSTOMS REGULATIONS.

GERMANY.

Consul General William Coffin, Berlin, April 18.

Collection of Interest on Delayed Payments of Export Duties.

The Federal Minister of Finance on April 6, 1923, decreed that from April 15, 1923, 2 per cent interest per month shall be collected on delayed payments of export taxes.

NEW ZEALAND.

Consul K. de G. MacVitty, Auckland, March 14.

Resumption of Trade With Germany.

The Minister of Customs of New Zealand states that the Cabinet has agreed to the resumption of trade with Germany, beginning September 1, 1923.

NORTHERN AND SOUTHERN RHODESIA.

Consul Charles J. Pisar, Cape Town, April 5.

Conclusion of Customs Agreement.

An agreement has been reached by the respective administrations of Northern and Southern Rhodesia whereby the authorities of each territory agree to pay to the other the amount of customs duty which has been collected on imported goods whenever these goods are removed from open stock in one territory and shipped into the other.

[This agreement is to continue in force during 1923 and thereafter for yearly periods, subject to denunciation by either party on 6 months' notice.]

ITALY.

Commercial Attaché H. C. MacLean, Rome, April 15.

Customs Reclassification of Certain Box Shooks.

Following the expiration of the treaty between Italy and Yugoslavia, box shooks, which had been admitted into Italy free of duty, automatically became dutiable from all origins at 3 gold lire per 100 kilos. In view of repeated protests in regard to this duty, a ministerial ruling has changed the customs classification so that box shooks which are not more than 7 mm. thick will be dutiable under item 604a (3) at a rate of 3 gold lire per quintal, while those over 7 mm. thick will be subject to duty under 604a (2) at a rate of 3 gold lire per metric ton. All box shooks were formerly dutiable under item 604a (3) at the rate given above.

SALVADOR.

Consul Lynn W. Franklin, San Salvador, April 19.

Change in Classification and Increased Duty on Certain Wooden Shutters.

Latticed shutters and Venetian blinds of wood, painted or not, heretofore classified under separate items and dutiable at 15 and 40 cents gold per kilo, respectively, have been classified under the same item of the import tariff of Salvador, with an import duty of 40 cents gold per gross kilo, according to an executive decree of April 12. The decree became effective from the date of its publication in the Diario Oficial on April 13, 1923.

[The above duties, as all other Salvadorean import duties, are subject to the addition of a surtax of 26.5 per cent of the duty.]

SIERRA LEONE.

Consul W. J. Yarby, Dakar, Senegal, April 16.

Valuation Certificates for Certain Parcel-Post Packages.

By the Customs Duties Ordnance, 1923, it is provided that every package imported by parcel post containing goods for sale or exchange which are subject to ad valorem duties should be accompanied by a certificate of current domestic value in the currency of the exporting country. If originating outside the British Empire, the certificate should be declared before a British consul.

SOUTHERN RHODESA.

Consul Charles J. Pisar, Cape Town, South Africa, April 5.

Rebates Allowed on Certain Imports.

The administrator of Southern Rhodesia has proclaimed a rebate of the import duty on the enumerated articles or materials, when imported according to prescribed regulations and used for certain manufacturing purposes:

(*a*) Cotton piece goods imported by manufacturers of bags when used by them in the making of tobacco bags.

(*b*) Rubber-proofed material, in the piece, made of cotton, hair, silk, or wool, or mixtures thereof, imported by manufacturers of waterproof clothing for the purpose of making such clothing.

(c) Pigments, filling agents and vulcanizing accelerators, viz, zinc oxide (zinc white), zinc sulphide, antimony sulphide (yellow and red), alumina, magnesium carbonate, calcined magnesia, lithopone (mixture of zinc sulphide and barium sulphate or of zinc white and barium sulphate), vegetable black, carbon black, Prussian blue, white lead (basic lead carbonate), ebonite powder and emarex (natural pitch), in bulk, used in the manufacture of rubber.

(d) Rubber substitutes, viz, vulcanized vegetable oils, in bulk, used in the manufacture of rubber.

(e) Rubber compounding oils, viz, aniline oil, resin oil, and vaseline, in bulk, used in the manufacture of rubber.

(f) Rubber solvents, viz, benzene (benzol), coal-tar naphtha, westrosol, westron, carbon disulphide, in bulk, used in the manufacture of rubber.

(g) Vulcanizing agents, viz, sulphur chloride, in jars of not less than 1 imperial gallon; used in the manufacture of rubber.

[A copy of the regulations governing these importations is on file in the Division of Foreign Tariffs. Information will be furnished interested American concerns upon specific request.]

UNION OF SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, April 4.

Proposed Antidumping Provisions.

A proposal has been made in the Parliament of the Union of South Africa providing for the imposition of a special dumping duty in addition to the regular customs duty on goods imported into the Union of a class produced or manufactured in the Union, if the export selling price be less than the price of the same goods for home consumption in the country of origin and if detriment to a Union industry may result thereby. This dumping duty is to be equal to the difference between the selling price to the importer and the price at which the goods are sold for home consumption in the country of origin.

It is proposed further to impose a "dumping freight duty" on goods carried to the Union of South Africa at a freight rate which, in the opinion of the minister, is detrimental to the production or manufacture of those goods in the Union. A minimum freight rate is to be established by proclamation of the Governor General and a dumping freight duty imposed equal to the difference between the net freight paid and the rate determined as aforesaid.

GENERAL TARIFF CHANGES.

POLAND.

Acting Commercial Attaché H. B. Smith, Warsaw, April 26.

Export Permit System To Be Replaced by Export Duties.

According to Rzeczpospolita of April 16, 1923, the ministry of finance has decided to replace the system of individual permits for the exportation of goods not on the free list by a system of export duties in order to eliminate favoritism and other abuses, such as forging export permits, to which the previous system gave rise, and at the same time to create an added source of income for the State treasury.

Export duties are to be fixed in gold, adapted to economic conditions and currency fluctuations by the system of variable multiples.

For the transition period, a statute now before the Diet provides that the Ministers of Finance and of Industry and Commerce shall publish a prohibited list of exports and shall issue permits to individuals in cases where they consider it to the interest of the State to do so.

UNION OF SOUTH AFRICA.

Trade Commissioner P. J. Stevenson, Johannesburg, April 4.

Increased and New Import Duties.

The new parliamentary budget contains several important increases in import duties and establishes certain new tariff items. The duties on calcium carbide and condensed milk are doubled, and the duty on boots and shoes increased by 50 per cent. Excise duties have been established on proprietary medicines and toilet specialties, the rate increasing with the value and varying from approximately 11 per cent to nearly 40 per cent.

With the exception of the increase of 50 per cent in the duty on motor spirit, which is not to be made effective until September 1, 1923, all duty changes became effective from the date of the budget presentation in Parliament, March 28, 1923.

The principal changes, together with the new items, are shown in the following table:

(See footnotes at end of table.)

No.	Items.	Former.		New.	
		General.	British preferential.	General.	British preferential.
8a	Calcium carbide, per 100 pounds	2s. 6d.	2s.	5s.	4s. 6d.

FOREIGN PATENTS AND TRADE-MARKS.

Familiar Trade-Marks Registered Abroad.

In recent numbers of the official gazettes of the countries enumerated below, there appeared notices of applications to register the trade-marks mentioned, which may be of interest to American concerns using similar marks in those markets. Since registration in these countries confers ownership, it is important that owners of similar trade-marks take prompt steps to oppose the registration within the period allowed by law.

Cuba.

"Orange Crush," "Orange Squeeze," and "Cherry Blossoms," applied for by Angelo Puleo, covering carbonated and mineral waters, sirups, fruit juices, etc.

"French Orlandine," applied for by P. Fernandez y Compañia, covering writing paper and envelopes.

"The Nelsown Shoe," applied for by Llama y Hermano, for shoes.

"Vitaemon," "Mildry," "Litiosal," and "Vitamina," applied for by Jose R. Pages, for food and pharmaceutical products.

"K. M. Z." in diamond, with words "Athletic Style," applied for by Lastra, Hermanos & Co., for underwear.

Peru.

"A. D. C. Kid," inscribed on a bell within a circle, together with the words "Trade Mark" and "New York-Chicago," application made by Pedro Herine, acting for Aycaquer Dichalde y Cia., to cover shoes.

Uruguay.

"Otis Tonic Tablets," applied for by Enrique Brusco, for pharmaceutical products.

[Further information concerning the above applications will be furnished on request.]

GERMANY.

Imitations of American Dolls.

Trade Commissioner Arthur J. Grey, at Berlin, has forwarded to the bureau copy of a catalogue and an advertisement clipped from the Handels-Zeitung des Berliner Tageblatts, illustrating various dolls of German manufacture, some of which are similar to American dolls sold under these current names: Kewpie, Billiken, Campbell Kids, Andy Gump, Oh Min, and Chester. Soap is also manufactured in these doll forms. American firms, holding patents in Germany for the above designs, and desirous of protecting their interests, may obtain further details on request.

OPPORTUNITIES TO ACQUIRE FOREIGN PATENTS.

Process for Making Bags Weevil-Proof.

The bureau is in receipt of a letter from an Australian patentee, offering to dispose of his rights in a process for treating bags used for the storage of grain to make them weevil-proof. It is stated that the cost of the treatment would amount to about 1 cent per bag, and the inventor is willing to carry out tests under any conditions to prove the utility of his invention.

[The name and address of the inventor may be obtained by any concern listed on the Exporter's Index desiring to communicate directly with a view to taking over the invention.]

Folding Scissors.

William J. Grace, American consul at Sheffield, England, has forwarded to the bureau samples of novelty scissors with collapsible handles permitting them to be fitted into a compact case about 3½ inches long. The case is provided with a ring for attaching to a chain or ribbon.

The British inventor wishes to dispose of his American rights in the invention either by direct sale or on a royalty basis. Firms listed on the Exporters' Index may obtain further information concerning the indemnity of the patentee, the number of the United States patent, and the details of the invention.

IMPORT AND EXPORT RESTRICTIONS.

CHILE.

Consul George A. Makinson, Valparaiso, April 9.

Prohibition of Scrap Metal Exports.

In order to insure an ample supply of suitable raw materials for the local foundries and rerolling mills, the Chilean Government has reestablished law No. 3297 of September 21, 1917, prohibiting the exportation of scrap iron and other scrap metals. (See COMMERCE REPORTS, November 19, 1917.) The purchase by speculators of considerable quantities of Chilean scrap iron for overseas shipment attracted the attention of the Government, and early in April instructions were issued to all the customhouses of Chile rigidly to enforce the above-mentioned law, which had been practically set aside in December, 1921, by a decree amending it. (See COMMERCE REPORTS, April 10, 1922.)

HUNGARY.

Consul Edwin C. Kemp, Budapest, April 11, 1923.

Relaxation of Export Prohibition List.

A decree by the Royal Hungarian Minister of Agriculture dated April 7, 1923, modifies the export prohibition list. The following argricultural products may now be exported without special permission:

Tariff No. 43, potatoes of the 1922 crop; 31, peas and lentils to be grown in 1923; 73, every kind of fowl (except game); and 79, eggs.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

POLISH RAILWAY TRAFFIC REFLECTS INDUSTRIAL PROGRESS.

L. J. Cochrane, clerk to trade commissioner, Warsaw.

Figures recently issued by the Polish Ministry of Railways on the average daily freight movement for January of 1921, 1922, and 1923 show a steady increase in domestic traffic and a decline in transit movement across Poland.

The 10,054 cars moved during January, 1923, represented an increase of 36 per cent over the corresponding 1922 average and of 44 per cent over that of 1921. The daily domestic car loadings in January averaged 7,373, an increase of 40 per cent over the 1922 January average and of 54 per cent over that of 1921.

Increased Traffic With Danzig and Border Points.

During January, 1921, 43 carloads daily were exported through or to Danzig, and the same number through all other Polish frontier stations. These increased to 122 and 135, respectively, in January, 1922. In the 1923 month, Danzig's daily average was 190 cars, an increase of only 55 per cent over 1922, while the number of cars sent out by other Polish border points increased 193 per cent.

Danzig's storage and loading facilities have been taxed to the utmost by the developments of Polish timber exports through that port, and this congestion is seriously restricting further shipments. Conflict between Polish and Danzig authorities in 1922 twice led to the suspension of Polish exports through the port.

Car Movements During January.

The following table shows the Polish car position in detail for January, 1921, 1922, and 1923:

January average of daily car movements in Poland.

Items.	1921	1922	1923
Cars loaded:			
Military material	1,016	348	327
Railroad material	329	514	542
Coal from Dombrova	648	907	1,224
Coal from Cracow	219	255	298
Coal from other mines	.....	59	86
Fuel wood	317	364	419
Mine timber	65	51	135
Mine raw materials	64	45	100
Industrial raw materials	409	362	770
Petroleum and products	170	231	190
Salt	54	29	90
Sugar beets	7	1	13
Foodstuffs	770	909	1,139
Exports via Danzig	43	122	190
Exports via other frontier stations	43	135	395
Miscellaneous	524	953	1,457
Total	4,778	5,285	7,375
Car consignments from foreign lines:			
Coal from Polish Teschen	52	12	12
Coal from Polish Silesia	622	646	1,190
Imports via Danzig	108	216	209
Imports via other frontier stations	241	270	382
Total	1,023	1,144	1,793
Cars in transit	1,174	946	886
Grand total	6,975	7,375	10,054

During January, 1923, the daily car loadings of foodstuffs increased 25 per cent, as compared with the same month of 1922, and 48 per cent, as compared with January, 1921.

Coal Traffic From the Dombrova District Increases.

Coal traffic from the Dombrova district shows a steady advance, daily car loadings having increased 35 per cent over the 1922 average and 89 per cent over that of 1921. Daily receipts from Upper Silesia increased 84 per cent over the 1922 January average and reflected the increased consumption of Polish Silesian coal in Poland since the incorporation of this territory in June, 1922.

Car loadings of crude petroleum approximated those of January, 1921, but showed a decline of 18 per cent as compared with January, 1922.

ACCUMULATION OF FOREIGN CURRENCY IN SOVIET RUSSIA.

Abstracted from Economic Life (Moscow) of April 29.

Receipts of foreign remittances in Russia, payable in foreign currency, have been increasing in number during the first three months of the year, although decreasing in average value, as shown in the following table:

Months, 1923.	Number of remittances.	Value (in gold rubles).	
		Total.	Average.
January	3,132	3,915,710	1,250
February	6,578	3,561,580	541
March	8,843	5,974,573	676
Total	18,553	13,451,863	.....

Of the above totals, 90 per cent of the number of remittances and 98 per cent of their aggregate value were passed through the Russian Soviet State Bank and the rest handled by the Russian Commercial Bank, recently established; the latter's share of the business increased somewhat in March, amounting to 18 per cent of the total number and 2.7 per cent of the total value of remittances. In addition to the above principal channels, about 8,000 remittances from the United States, sent through the Amalgamated Trust and Savings Bank of Chicago, were handled by the Trade and Industrial Bank, averaging about 9.4 rubles apiece (approximately $4.80).

Hoarding Foreign Money Undermines Soviet Currency.

Since the total gold value of soviet paper money in circulation, amounting on April 1 to 4,482,800 billion

rubles, is estimated at about 100,000,000 rubles, it will be seen that the influx of foreign currency during the first quarter of 1923 alone amounted, in purchasing capacity, to about one-seventh of the total value of currency. This development is viewed with some anxiety by the soviet authorities.

Foreign currency is barred from circulation in Soviet Russia and must be exchanged into soviet paper in order to become legal tender. As the rate of exchange of all foreign currencies except dollars is quoted below the London rate on the Moscow exchange, the Russian recipients of the small remittances lose considerably on this operation. This leads to the hoarding of foreign currency; in consequence, the latter has lately been rising in value, more or less parallel with the chervonets notes of the State Bank (see COMMERCE REPORTS, March 26, p. 834), and thus competing with them as a means of saving. This interferes with the fiscal policies of the Soviet Government by creating monetary material within the country which, while legally barred from circulation, is at the same time encroaching upon the stabilizing functions of chervonets bank notes, thereby undermining their value.

Russia's Foreign Trade, First Quarter of 1923.

Abstracted from Economic Life (Moscow) of April 29.

According to preliminary data compiled by the Russian Customs Administration, the foreign trade of Soviet Russia for the first quarter of 1923 covered the following quantities and values (quantities are expressed in long tons, converted from poods at the rate of 62 poods to the ton; values are in gold rubles, at 1913 prices):

Months, 1923.	Imports.				Exports.	
	Commercial.		Famine relief.		Long tons.	Gold rubles.[1]
	Long tons.	Gold rubles.[1]	Long tons.	Gold rubles.[1]		
January	40,370	6,841,000	7,145	7,393,000	55,630	5,115,000
February	34,420	6,107,000	5,967	4,248,000	74,740	6,095,000
March	48,390	8,432,000	8,950	6,460,000	117,470	8,570,000
Total	123,180	21,430,000	22,062	18,101,000	247,840	19,780,000

[1] The ruble equals $0.5146.

Notes on Latvian Finance.

Trade Commissioner C. J. Mayer, Riga, Latvia, May 4.

The Minister of Finance of Latvia states that he has paid 1,500,000 lats (1 lat equals 1 gold franc) of the State debt during the fiscal year ended March 31, 1923. The total State debt now amounts to 38,205,000 lats. The balance sheet of the Bank of Latvia on March 27, 1923, shows: Notes in circulation, 16,697,000 lats; Government deposits, 19,844,000; other deposits, 18,700,000. Among its assets are included: Gold coin and bullion, 13,000,000 lats; credits abroad, 41,296,000. The exchange rate of the lat in March fluctuated between narrow limits, maintaining an average of 5.12 lats for $1, or slightly above par.

BALKANS AND LEVANT.

FOREIGN TRADE OF SYRIA IN 1922.

Consul Paul Knabenshue, Beirut, Syria.

Syrian imports in 1922 suffered a slight decline in comparison with 1921, whereas exports showed a marked improvement. Both imports from and exports to the United States decreased during 1922. From an economic standpoint the outstanding feature of the year's record is the fact that Syria's trade balance is still far from satisfactory. As its production of foodstuffs is insufficient for the needs of the population (although Syria is classified as an agricultural country), and as no mineral wealth or natural resources have been found or developed, it is difficult to see just how this balance will be adjusted.

Prior to the war Syria's position as a hub for the commerce of the hinterland tended to assist in the balancing of her budget; but since the armistice the creation of a customs barrier throughout the interior has diverted her trade. The country's revenue is now being derived almost exclusively from funds spent by the army of occupation and from remittances sent by immigrants residing in North and South America.

The chief imports through the port of Beirut during 1922 were cotton goods, principally from Italy, the United Kingdom, and Egypt; food products, principally from France, Italy, and the Netherlands; liquors and beverages, principally from France, Germany, and Egypt; colonial products and grain, principally from Egypt, the United States, and France; iron and steel, principally from Belgium and England; building materials, principally from France and Belgium; and petroleum, principally from the United States and Egypt.

Syrian Port Customs Statistics.

While it is possible to secure fairly satisfactory statistics of detailed imports from the manifests of incoming ships, it is impossible to secure like details of exports, as there is no systematic method of compiling export statistics. The only figures available show merely the total value of imports and exports from various ports and the total quantities and values of imports from and exports to various foreign countries.

The total value of imports by ports of entry during 1921 was 588,421,000 (French) francs ($44,131,575,

converted at $0.075—the average rate of the franc for 1921); during 1922 such imports were valued at 501,456,000 francs ($41,119,392, converted at $0.082). The total value of exports by ports of shipment during 1921 was 69,848,000 francs ($5,238,600) and, in 1922, 87,884,000 francs ($7,206,448). The distribution of this trade among the different ports is shown in the following table:

Foreign trade of Syria during 1921 and 1922, by customs ports.

Customs port.	Imports.		Exports.	
	1921	1922	1921	1922
	French francs.	*French francs.*	*French francs.*	*French francs.*
Beirut	465,648,000	363,025,000	26,374,000	36,392,000
Tripoli	65,675,000	73,476,000	8,727,000	13,227,000
Alexandretta	38,949,000	27,216,000	8,838,000	25,293,000
Sidon	3,341,000	3,794,000	709,000	744,000
Lattakia	7,356,000	5,138,000	422,000	326,000
Aleppo	2,989,000	8,493,000	19,322,000	2,685,000
Damascus	9,483,000	20,302,000	5,406,000	9,307,000
Total	588,421,000	501,456,000	69,848,000	87,884,000

Relative Value of Trade With Different Countries.

The principal countries of origin in value of imports during 1921 were the United Kingdom, Egypt, France, Italy, United States, Turkey, Belgium, and Germany, in the order named; in 1922 this order was United Kingdom, France, Egypt, Italy, Germany, United States, Belgium, and Turkey. The principal countries of destination in value of exports during both 1921 and 1922 were France, Turkey, Egypt, United States, and Italy—Turkey and Egypt exchanging position in 1922.

Yugoslav Finances.

Consul K. S. Patton, Belgrade, May 4.

Despite the indecisive results of the general elections of March 18, 1923, and the resultant serious ministerial crisis which lasted through the second half of April, the dinar exchange continued to improve during the latter month. On April 1, 1923, the dollar brought 99 dinars on the local bourse; on May 3 it brought only 91 dinars. The rise of the franc on the Paris Bourse contributed in a measure to this improvement, as dinar exchange follows sympathetically the fluctuations of the French money market.

The money market is slightly easier than at any previous time within the past nine months. The completed construction of a large number of buildings has relieved the pressure on the banks for credits for this purpose, while the new loan of 5,000,000 Swiss francs at 8½ per cent contracted in Switzerland by the Uprava Fondova (State Mortgage Bank), the proceeds of which are to be used to advance credits for the completion of buildings actually under construction, will further relieve the money stringency.

Bank-note circulation remains almost stationary. On April 22 it stood at 5,420,254,880 dinars, as against 5,379,764,000 on March 15 and 5,255,871,000 on February 22. The high rates of interest being charged by the banking institutions for credits advanced has induced the National Bank to issue a circular to all banks, calling for a report on the interest rates which they pay or charge on loans. It is believed that the National Bank contemplates refusing credits to those banks charging exorbitant rates. Rates of from 30 to 35 per cent on time loans are not unusual; as the National Bank advances credits to banks at a rate of only 7 per cent, any measure which it institutes will have a most decided effect.

The new 1,000-dinar notes printed by the Bank of France have made their appearance. They resemble in size, color, and paper the 100-franc bill now circulating in France. These bank notes will gradually replace the 1,000-dinar notes now in circulation. No official information is available as to the number of these bank notes forming the new issue.

Economic Notes From Egypt.

January Trade Balance Very Favorable.

During January, 1921, Egypt's imports showed a value increase of about $400,000 over the corresponding month of 1922, and the exports showed an increase of about $11,000,000. The trade balance for January was in Egypt's favor to the extent of $14,853,907. The considerable decline in combined imports and exports as compared with December, 1922, is attributable partly to lessened cotton shipments. (Consul S. B. Jacobson, Alexandria, March 22.)

Important Development in Lower Sudan.

It is reported in the local press that important developments are to take place in the Lower Sudan and that material has already been ordered for the railroad from Thamian to Kassala. The road is being built in anticipation of the planting of 100,000 acres to Sakallariadis cotton. This will undoubtedly make Port Sudan one of the most important shipping points on the Red Sea. (Consul Coert Du Bois, Port Said, March 20.)

Additional information regarding Eastern Europe and the Levant appears in this issue under the following sections:

Petroleum: Oil production in Russia.

Transportation—railways: Proposed railway construction in Latvia.

Tariffs and trade regulations:
Ratification of commercial treaty by Esthonia and Hungary.
Increased import duties in Poland on various articles.

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division

FINANCIAL CONDITIONS IN IRELAND.

Vice Consul Harold M. Collins, Dublin.

The Minister of Finance of the Irish Free State has presented budget estimates for the fiscal year April 1, 1923, to March 31, 1924, to the Dail. Receipts were estimated at £26,050,000, made up of £20,550,000 from tax revenue and £5,500,000 from nontax revenue, including British contributions during the year toward compensation for pre-truce damage to property. Expenditures were estimated at £46,500,000, the main items being £10,664,500 for army expenditure and £10,985,550 for payment of compensation awards arising from damages during military operations and other administrative expenses of the Government. The estimated deficit for the fiscal year 1923–24 is £20,450,000, compared with an actual deficit of £4,000,000 during 1922–23. The deficit for 1922–23 has been covered by Dail borrowings, and it is probable that the 1923–24 deficit will be met by the flotation of an internal loan.

The revenue from customs, which in 1922–23 amounted to £2,497,299, is expected to increase this year to £7,300,000 as a result of the new fiscal regulations. The estimated revenue of £8,000,000 from the excise tariff is a decrease of £8,488,000 from last year's total, due to the loss through drawbacks of excise duties on stout and whisky exported from the Free State to Great Britain. In addition to the above, detailed estimates of receipts are excess-profits taxes, £50,000; motor-vehicle taxes, £250,000; estate taxes, £1,000,000; stamps, £400,000; property and income taxes, including supertax and mineral-rights duty, £3,300,000; and corporation-profits taxes, £250,000. Detailed expenditures consist of £42,278,408 for supply services, including army expenditures, payment of compensation awards, and other administrative expenses of the Government; £3,671,556 for central fund service, including local taxation grants, payments to road fund, service of debt, and payment of £1,750,000 to the British Government for revenue adjustment; and £691,700 for capital issues, including sums required for telephone capital and for advances to the unemployment fund.

General Conditions Satisfactory.

Optimism marks the country's reaction to the state of affairs disclosed by the budget. The country is in an essentially sound position economically, despite the strains to which it has been subjected during the past year. Although bank discounts and advances contracted, the banks on the whole had a successful year and are favorably situated at present. Most of the prominent business houses were able to declare dividends during 1922 and are now doing fairly well. The agricultural industry is having difficulty on account of unsatisfactory labor and transportation conditions, but live-stock shipments are holding up and the cross-channel market for butter and eggs is satisfactory.

Railroad and the land-purchase problems are now the most disturbing factors in the situation. In order to put railroads on a satisfactory basis and to dispose of the matter of land purchase, the Government may have to go rather far in pledging its credit, giving rise to some apprehension as to the attitude of investors toward the proposed internal loan to meet the budget deficit.

CZECHOSLOVAKIA RECOVERING FROM INDUSTRIAL DEPRESSION.

Acting Commercial Attaché H. Lawrence Groves, Prague, May 2.

General business conditions in Czechoslovakia during the month of April showed a further slight recovery with a continued active demand at firm prices for coke, iron, and steel. Unemployment decreased and with the prospect of an early settlement of the chemical trades strike a further decrease is expected. The favorable trade balance for March declined on account of increased imports of cotton, wool, and tobacco. Sugar prices remained unchanged, while the agricultural outlook was favorable.

Note Circulation, Exchange, and Bank Clearings Steady.

The note circulation of Czechoslovakia increased slightly to 8,930,000,000 crowns (more than 2,000,000,000 crowns below the legal limit) on April 23, as compared with 8,580,000,000 crowns on March 23. An increase was also made in the metallic reserve, amounting to 843,000,000 crowns against 826,000,000 crowns in the preceding month; total reserves, consisting of the metallic reserves, commercial paper, foreign securities, etc., amounted to 3,950,000,000 crowns as compared with 3,270,000,000 crowns on March 23. Foreign credit holdings increased considerably to 1,080,000,000 crowns from 533,000,000 crowns. Capital levy payments amounted to 2,600,000,000 crowns on April 23, showing an increase of 100,000,000 crowns during this period.

Exchange continued steady during April, the crown being quoted on the Prague exchange on April 1 at 34.20 crowns to the dollar, and 34.10 crowns on April 25. The New York cable rate for the crown was $0.0297 on April 2 and $0.0296 on April 30. On May 22 the Czechoslovakian crown was quoted at $0.0298.

The industrial depression has embarrassed several secondary banks and created some public uneasiness, but the general banking situation appears satisfactory. Prague bank clearings from March 24 to April 23 amounted to 5,470,000,000 crowns, against 5,140,000,000 crowns during the previous period.

Bohemian Bank's Losses.

An examination of the books of the Bohemian Bank, though not yet completed, shows a probable net loss to the bank's creditors of upward of 100,000,000 crowns after wiping off 47,000,000 of capital and reserves and some 25,000,000 crowns of real estate assets.

Slight Decline in Retail and Wholesale Prices.

The cost of living in Czechoslovakia continued to decline during March, as shown by a slight decrease of retail prices. According to the Government Statistical Office the March retail index for group one (covering 23 necessities, such as foodstuffs, fuel, etc.) decreased to 926 from 934 for February. Group two (covering textiles, shoes, and men's hats) decreased to 1,047 from 1,064 for the previous month. The Government wholesale price index (covering foodstuffs and industrial products) increased from 1,028 for February to 1,031 for March. The Narodni Listy general wholesale price index was 983 for March as compared with 976 for Feb-

ruary and 973 for January. (All figures based on 100 for July, 1914.)

Unemployment and Commercial Failures Decrease.

Total unemployment was estimated at 340,000 at the beginning of May, as compared with 404,000 on March 1, and 420,000 at the beginning of the year. At the end of April there was a strike in the chemical industry affecting 5,000 workers; prospects, however, for an early agreement are favorable.

Commercial failures during March numbered 409 against 426 for February, with approximate resources of 103,000,000 crowns and liabilities of 95,000,000 crowns. The latter figures compare with 87,000,000 crowns and 184,000,000 crowns, respectively, for the previous month.

Sugar Statistics—Crop Conditions Good.

Sugar production for the first half of the sugar year (October to March, 1923) amounted to 22,000 metric tons of raw sugar and 619,000 tons of refined. Exports of raw sugar amounted to 13,000 tons and of refined sugar to 222,000 metric tons. Domestic consumption amounted to 207,000 tons of raw sugar. The increase of 65 crowns per 100 kilos in the domestic price for refined sugar was canceled following the pressure brought upon the refiners by the Government.

Winter cereal crops are above average condition, with a favorable outlook, while the sugar-beet acreage is estimated 20 per cent greater than last year. Many flour mills reduced operations on wheat flour and are agitating an imposition of a customs tariff.

Coal Production Decreases.

During February the output of bituminous coal amounted to 880,000 metric tons and of lignite to 1,470,000 metric tons, as compared with 912,000 metric tons and 1,580,000 metric tons, respectively, in January. Coke production amounted to 110,000 metric tons, against 74,000 tons in January.

Foreign Trade Shows Decline of Favorable Balance.

The March favorable trade balance of 100,000,000 crowns was much lower than for previous months, owing principally to increased imports of cotton, wool, and tobacco. Total March imports amounted to 270,000 metric tons, valued at 801,000,000 crowns, while exports amounted to 1,028,000 tons, valued at 902,000,000 crowns.

During the first quarter of 1923 total imports amounted to 571,000 metric tons, valued at 1,820,000,000 crowns. Total exports amounted to 2,630,000 metric tons, valued at 2,550,000,000 crowns, showing a favorable balance of 730,000,000 crowns.

ECONOMIC SITUATION IN DENMARK IMPROVES.

Assistant Trade Commissioner Harry Sorensen, Copenhagen, May 19.

The economic situation in Denmark continues to improve. Industry is becoming more active and unemployment is decreasing. Confidence in financial circles is returning slowly; exports are increasing; and the crown is becoming more stable. The chief unfavorable factor is the adverse balance of trade, which, however, has improved during March. The granting of credit remains very restricted.

Consolidated Bank Statement—Note Circulation—Bourse.

The consolidated statement for Danish banks for April shows loans amounting to 2,821,000,000 crowns and deposits to 2,979,000,000 crowns as compared with 2,826,000,000 crowns and 2,995,000,000 crowns, respectively, a month ago.

The note circulation of the Riksbank on May 12 was 441,000,000 crowns; at the beginning of April the amount in circulation was 449,000,000 crowns. The status of the Danish Landmandsbank continues favorable, the April statement showing a considerable increase in deposits.

Bourse transactions are conspicuous by the fall in prices, the bank stock index on May 12 registering 99, shipping 83, and industrials 75. The turnover was small and there were practically no capital issues. Commercial failures during the month numbered 48.

Labor Situation—Prices Rise.

Only lesser labor conflicts are in progress, and unemployment has declined to 28,000 as against 60,000 at the same time last year. Industrial activity is much improved in all lines, but a fear of German dumping exists as a result of the decline of the mark.

Wholesale prices, particularly on food, continue to rise. The index for April showed 204—15 per cent over the figure a year ago. The present depreciation of the crown is to a large extent the cause of the rise in wholesale prices.

Foreign Trade Shows Large Exports—Shipping.

The foreign trade during March totaling 301,000,000 crowns was very large. Exports amounting to 134,000,000 crowns were the largest in 18 months. The export items include eggs, 9,200,000 crowns; dairy products, 46,800,000; packing products, 40,400,000; and live stock, 7,500,000 crowns.

Imports for March amounting to 167,000,000 crowns, as compared with 155,400,000 crowns for the previous month, include large quantities of grain. The number of automobiles imported during March was 210, as compared with 133 in February. The fall in the price of butter and eggs increased the unfavorableness of the balance of trade, but a high export price on bacon alleviated the effect to some extent. April customs receipts indicate very heavy imports during the month.

Shipping is well engaged and shipbuilders are busy. The agricultural outlook is generally promising, but cold weather is retarding the growth of crops.

NORWEGIAN CONDITIONS AFFECTED BY BANKING CRISIS.

Assistant Trade Commissioner Harry Sorensen, Copenhagen, Denmark, May 19.

The most important development in Norway during last month was the financial crisis, the effect of which is likely to extend the economic depression. The public remains quiet as regards the situation. The financial guaranty of the Government applying to new business has been granted to the Central Bank of Norway and to the Forenings Bank.

The financial crisis caused the note circulation to rise sharply to 404,000,000 crowns on May 7; on April 1 the circulation stood at 375,000,000 crowns. The crown is showing a violent reaction and continues to decline sharply. The shipping and industrial shares index on May 7 was 271 while bank shares were quoted at 178.5.

Exchange Turnover—Capital Emissions.

The stock exchange turnover in April included 5,500,000 crowns in securities and 3,100,000 crowns in foreign exchange. A condensed February bank balance shows loans amounting to 2,957,000 crowns and deposits to 2,847,000,000 crowns, as compared with

3,013,500,000 crowns and 2,897,400,000 crowns, respectively, in January.

April's capital issues of 3,500,000 crowns show a considerable increase over the March total of 1,030,000 crowns, but fell below the February issue of 4,900,000 crowns. Business failures reported for April numbered 85 as compared with 75 for March.

Labor and Industry Improving.

The labor situation has improved and no major strikes are expected. The number of unemployed on May 1 was 19,000, a substantial decrease from 22,000 on March 24 and 27,000 on March 15. Agreements have been concluded in the iron industry providing for a slight reduction in wages based on the price indexes. Industrial activity is generally good with active foreign demand for export products. Wood-pulp stock is reported exhausted and prices are expected to rise. Shipping is fairly active, although profits are small.

Foreign Trade Shows Increase in Exports—Price Indexes.

March exports, valued at 84,500,000 crowns, exceeded those of February by 22,300,000 crowns and those of January by 37,900,000 crowns. Of the March exports, fish and fish products amounted to 14,000,000 crowns; lumber at 8,000,000 crowns compared favorably with 6,900,000 crowns for February; paper at 11,700,000 crowns showed an increase of 2,500,000 crowns over the preceding month; wood-pulp exports during the month were unusually large, amounting to 18,000,000 crowns, as compared with 12,700,000 for the month before; chemical products totaled 22,000,000 crowns. Customs receipts indicate an increase in imports.

Wholesale prices during April continued to increase, the index number reaching 231.4, as compared with 229.4 for March. The official cost of living index on April 16 registered 236 against 237 a month previous.

CZECHOSLOVAKIA'S FAVORABLE TRADE BALANCE REDUCED.

Acting Commercial Attaché H. Lawrence Groves, Prague, April 28.

The imports into Czechoslovakia during March showed a sharp increase over the preceding month, being valued at 801,000,000 crowns against 591,000,000 crowns in February. The exports also show an increase, amounting to 902,000,000 crowns in March as compared with 873,000,000 crowns in February. The favorable February balance of 282,000,000 crowns was reduced, however, to 101,000,000 crowns in March.

The increased imports in March were due principally to heavy purchases of cotton, tobacco, and other raw industrial materials. The value of the leading items was: Cotton, 134,000,000 crowns; tobacco, 102,000,000 crowns; wool, 86,000,000 crowns; fats and lard, 62,000,000 crowns; and cereals and bread flour, 60,000,000 crowns. Over one-third of the imports (275,000,000 crowns) came from Germany (with which, however, are included much cotton, lard, and tobacco from the United States shipped to Czechoslovakia from Hamburg and Bremen); the United States was second with 65,000,000 crowns, and Austria, Hungary, France, the Netherlands, and Italy followed in the order named.

Sugar was the leading export in March, being valued at 162,000,000 crowns, followed by cotton and cotton products, 98,000,000 crowns; woolen goods, 81,000,000 crowns; glass, 65,000,000 crowns; iron and steel products, 59,000,000 crowns; and coal and timber products, 187,000,000 crowns. Roughly, one-fourth of the value of goods exported in March went to Germany, with Austria a close second, and Great Britain third, taking approximately 10 per cent of the exports. Hungary, Switzerland, and the United States followed in the order mentioned.

Czechoslovakia's foreign trade is closely linked up with the Government's control of foreign exchange. During April the foreign credits held by the State Banking Office increased very sharply (by more than 200,000,000 crowns weekly in the last three weeks). If this increase is due in part to the natural causes (favorable trade balance), the State Banking Office may soon decide to relax its attitude in regard to the granting of import licenses and the purchase of foreign funds to cover imports.

FINANCIAL REFORM MEASURES IN ITALY.

Commercial Attaché H. C. MacLean, Rome, Italy, May 13 and 16.

On May 13 the Ministry of Finance of Italy issued a statement of the present fiscal policy and the financial situation of the Italian Government, including a discussion of tax reforms and budgetary changes. According to this report the present Italian fiscal policy is based on the more equitable distribution and simplification of taxes. The first result of this policy is said to be the elimination of 50,000 evasions of tax payment, and by an extension of the scope of the income tax 1,415,000 persons are estimated to have been added to the number of those who must pay the tax. Among the tax reforms announced are a reduction in the number of direct taxes from 13 to 3 to simplify both payment and collection and the establishment of a single sales tax to replace the four taxes formerly in effect. The revision of real-estate assessments is also going forward.

For some time abuses in the administration of municipal and communal finances have been prevalent, and on April 19 the draft of a decree was approved providing that within two months reforms must be carried out which will bring expenditures within the bounds of ability to pay and put the local organizations on a sound financial footing. It is now reported that the central Government is determined to see that the needed reforms are put in practice.

Budgetary Changes.

Some of the most important reductions introduced into the 1923–24 budget since its presentation in November are the abolition of the royal guard, 285,000,000 lire; reduction in appropriations for railways, 280,000,000 lire; public works, 221,000,000 lire; military, 152,000,000 lire; posts and telegraphs, 101,000,000 lire; Ministry of Finance, 75,000,000 lire; new provinces, 61,000,000 lire; Commerce and Labor, 43,000,000 lire; Interior, 33,000,000 lire; Instruction, 29,000,000 lire; Agriculture, 23,000,000 lire; Justice, 23,000,000 lire; colonies, 14,000,000 lire; and interest charges, 100,000,000 lire. At the same time the following increases are contemplated: Aviation, 74,000,000 lire; new militia, 25,000,000 lire; shipbuilding, 45,000,000 lire; ship subsidy, 14,000,000 lire; and service on the 1,500,000,000 lire loan for the payment of war claims, 76,000,000 lire—a total increase of 367,000,000 lire. It is also estimated that revenues will be 442,000,000 lire greater than the original forecast.

The following are the revenues and expenses of the budget as it now appears:

	Millions of lire.
Expenditures:	
Ordinary expenses	12,369
Extraordinary expenses	5,813
Capital accounts payments	2,879
Railroad construction	300
Total	21,361
Revenues:	
Ordinary revenues	14,333
Extraordinary revenues (including 1,000 million lire on reparations account)	1,233
Capital accounts receipts	4,307
Total	19,873

The net deficit (which apparently excludes from consideration the 300,000,000 lire for railroad construction) is set at 1,187,000,000 lire, compared with a deficit of 4,000,000,000 lire shown in the budget estimate issued in November. Of this difference, 674,000,000 lire is stated to represent the difference between the 750,000,000 lire originally appropriated for war-claims settlements and the 76,000,000 lire set aside for service on the 1,500,000,000 lire loan to take care of these claims.

The deficit for the current fiscal year, which ends June 30, 1923, was originally estimated in July, 1922, at 3,998,000,000 lire. The revised estimate just issued puts total expenses at 23,655,000,000 lire (an increase of 1,252,000,000 lire) and total receipts at 19,103,000,000 lire (an increase of 698,000,000 lire), leaving a deficit of 4,552,000,000 lire. The deficit for the fiscal year ended June 30, 1922, was nearly 7,000,000,000 lire, indicating a considerable improvement this year; and it is possible that recently effected reforms will make the deficit less than now estimated. The railway deficit is estimated at 1,000,000,000 lire, but reduction to 374,000,000 lire next year and elimination within three years are promised.

The Italian Public Debt.

As mentioned above, arrangements have been made to settle war claims by an issue of 1,500,000,000 lire in 25-year bonds bearing interest at 3½ per cent. This will further relieve the situation of the treasury, which has already improved to a considerable extent.

The public debt on March 31 amounted to 116,975,000,000 lire, an increase of 2,717,000,000 lire since July 1, 1922 (in this statement foreign debts, amounting to about 22,000,000,000 lire, are calculated at par of exchange, no increase being made on account of the depreciation of the Italian lire). The adjustment of the Italian debt to Great Britain is not being considered at present because of its close connection with general European problems still awaiting settlement, but Italy intends to provide for payment of the debt to the United States, asking for an adjustment of terms similar to that recently granted by the United States to Great Britain.

Significant Economic Statistics.

Government revenues in April amounted to 1,363,000,000 lire, a decrease of 23,000,000 lire compared with April, 1922. In March, 1923, revenues were 48,000,000 lire higher than in March, 1922. Revenues for the current fiscal year tend to approximate fairly closely those for the preceding year, an increase in one month generally being offset by a decrease in the succeeding month.

The combined statement of the three banks of issue for March 31 shows a further decrease in note circulation, which on that date amounted to 17,034,000,000 lire, a decrease of 128,000,000 lire compared with February 28 and of 412,000,000 lire compared with January 31. Discounts on March 31 amounted to 6,052,000,000 lire, an increase of 139,000,000 lire compared with February 28. The combined statement of the leading private banks on February 28 showed deposits of 2,199,000,000 lire compared with 2,182,000,000 lire on January 31, and loans and discounts of 8,079,000,000 lire compared with 8,124,000,000 lire at the end of January.

The number of business failures in Italy still tends to increase. According to a Turin publication, Le Procedure Commerciali, they numbered 462 in April compared with 434 in March. The Milan Chamber of Commerce, which keeps an independent record of failures, states that 433 occurred in March.

The cost of living is still on the upgrade. The index number of wholesale prices in April was 94.2 (based on average 1920 prices) compared with 94.0 in March and 92.8 in February.

The amount of capital invested in industry and commerce this year compares favorably with investments a year ago. Increases in capitalization in April amounted to 412,000,000 lire, against withdrawals of 70,000,000 lire, leaving a net increase in capitalization of 342,000,000 lire compared with 178,000,000 lire in March and 120,000,000 lire in February. In the corresponding months of 1922 the increases were 1,000,000 lire, 103,000,000 lire, and 250,000,000 lire, respectively, an advance of 286,000,000 lire in favor of 1923.

[NOTE.—The statistics given above in connection with the Italian budgets and public debt are not complete and show slight discrepancies compared with statistics previously received. In the interests of quick service they are given for what they are worth, and any necessary corrections will be made when the complete report is received by mail.]

Heavy Increase in German Unemployment.

Commercial Attaché C. E. Herring, Berlin, May 10.

The degree of depression in German industry (mentioned in the cable summary of Germany in COMMERCE REPORTS for May 21) is indicated in the following statistics of part time and total unemployment. The employment office reports that early in April 1,230,000 members, or almost 25 per cent of the total, were working on part time. There has been an appreciable increase in the number of plants working less than 24 hours a week. The percentage of workers on part time in various industries is given as follows: Shoemakers, 66 per cent; textiles, 52 per cent; clothing, 42 per cent; tobacco, 40 per cent.

The amount of money expended by the Government in subsidies to those employed only a portion of the time can not be accurately estimated, although a direct effect may be seen in the unprecedented note issue of the last month.

Total Unemployment Also Increased.

The Government employment office reports an increase of 24,000 totally unemployed out of a membership of nearly 6,000,000, between early in March and early in April. The Government dole to those totally unemployed varies from 22,000 to 28,000 marks per week, according to the locality, for a worker with a wife and two children. It is estimated that the minimum expenditure for such a family in the Berlin district is approximately 80,000 marks. Although the

Government dole by no means meets this minimum cost of living, it is estimated, nevertheless, that the Government in March expended more than 11,000,000,000 marks toward unemployment relief.

Swiss Federal Finances in 1922.

Based on report from American Minister J. C. Grew, Berne, April 11.

The accounts of the Swiss Confederation for the year 1922 indicate receipts of 425,863,979 francs and expenses of 505,271,645 francs. The excess of expenses is therefore 79,407,666 francs. The budget prepared at the beginning of the year provided for receipts of 422,200,000 francs and expenses of 521,600,000 francs, or an estimated excess of expenses of 99,400,000 francs. The deficit for 1922 compares favorably with those of preceding years; the excess of expenses was 95,700,000 francs in 1919, 99,500,000 francs in 1920, and 127,000,000 francs in 1921.

The principal items of expenditure are the following: Interest on and amortization of debt, 119,225,496 francs; Department of Railways, Posts, and Telegraphs, 195,591,650 francs; Military Department, 79,137,801 francs; Department of Public Economy, 37,979,454 francs; Department of Finance and Customs, 22,444,706 francs.

The chief sources of income are: Department of Finance and Customs, 196,709,767 francs; and Department of Railways, Posts, and Telegraphs, 190,060,777 francs.

Ruhr Occupation Affects Sweden.

Assistant Trade Commissioner Harry Sorensen, Copenhagen, Denmark, March 31.

The Ruhr occupation is affecting Sweden both adversely and favorably. Swedish iron ore exports have been almost entirely stopped, while the supply of rails, beams, and other construction materials of iron and steel is likewise being shut off, thus hampering seriously the building trades. Swedish home industries, however, are greatly benefited by the disappearance from the Swedish market of serious German competition.

Hungarian Foreign Trade.

Acting Commercial Attaché H. L. Groves, Prague, Czechoslovakia, April 28.

The imports into Hungary during January and February totaled 47,000,000,000 crowns and the exports 19,800,000,000 crowns, which in terms of gold are equivalent to approximately 90,000,000 crowns for imports and 37,800,000 crowns for exports, according to the Government statistical office in Budapest. The principal imports were raw and finished textile materials, coal, and timber products, while wheat flour, animal products, wine, and metal products were the leading exports.

International Sample Fair at Naples.

The Third International Sample Fair at Naples is to be held from September 16 to 30, 1923. Last year the fair was well attended and reported very successful. While most of the articles were of Italian workmanship, American specialties and motor cycles were represented.

Additional information regarding Western Europe appears in this issue under the following sections:

Coal: British trade in bunkering fuels.
Finance: Bank returns reflect trade in United Kingdom.
Automotive products:
American motor cycles needed in Austria.
American piston rings find limited market in United Kingdom.
British motor exhibition dates changed.
Transportation—railways: Freight rates on British railways reduced.
Transportation—communications:
Annual report of the Great Northern Telegraph Co.
Danish postal service operates with surplus.
Tariffs and trade regulations:
Ratification of commercial treaty by Hungary and Esthonia.
France-Guatemala commercial treaty effective.
Germany to collect interest on delayed export duty payments.
New and increased duties in South Africa.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

COLOMBIAN ECONOMIC RECOVERY DELAYED.

Consul L. R. Sawyer, Cartagena, May 4.

The encouraging economic movement in Colombia has received a temporary setback from the recent downward trend of coffee prices, which have dropped approximately $0.035 per pound from the level of early February, and are now quoted at about the figures which prevailed early in January. Medellin "Excelso" fell to $0.20 per pound during April, and all other Colombian coffees suffered proportionate losses.

Higher Transportation Rates Proposed on Magdalena.

Considerable interest has been manifested in a recent meeting of the representatives of the various steamboat companies operating services on the Magdalena River. The conference was held to discuss a settlement of the existing rate controversy, and the reestablishment of freight and passenger rates as approved by the Government in 1919 and revised in 1921. Chambers of commerce and trade associations have protested against the proposed increases, and the Government has notified the companies that such increases must receive the approval of the Government before they can go into effect.

American Financial Commission Active.

The president of the American financial commission now in Colombia advised the Government that the press statement to the effect that the commission had reported unfavorably on the $100,000,000 loan for internal improvements was unfounded. The denial added that the commission was still gathering data on the subject in order to formulate an opinion, and that the commission was purely advisory in character. The Colombian Government has assisted materially in the work of the commission and has provided every facility for making its efforts effective.

Dollar Fluctuates During April.

The American dollar opened at 106½ Colombian pesos, but by the middle of the month it had declined to 105½ as a result of Bogota banks expecting large offers of coffee drafts. The coffee crop in the Bogota region came in slowly, however, and in New York prices weakened noticeably. This combination exerted a strengthening influence, and by the end of the month the dollar had climbed to 106¾. The steady increase in imports during the past few months is expected to contribute to firmness in dollar exchange.

Marconi Wireless Service Formally Opened.

The Marconi Wireless Co. of Colombia inaugurated in April its domestic and foreign wireless service. The national service includes stations at Bogota, Medellin, Cali, Cucuta, and Barranquilla, while international radiograms are to be transmitted through the Bogota station.

Peruvian Budget for 1923.

Acting Commercial Attaché W. E. Dunn, Lima, April 20.

Following are the estimated expenditures provided for in the Peruvian Budget for 1923, as approved by the recent session of Congress:

	Peruvian pounds.
Chamber of Deputies	179,029
Senate	57,159
Regional congresses	18,720
Ministry of Government	1,055,195
Ministry of Foreign Relations	201,556
Ministry of Justice, Education, etc	1,007,621
Ministry of Finance	2,629,070
Ministry of War	973,700
Ministry of Marine	275,448
Ministry of Industry	683,682
Total	7,081,184

The estimated revenues are also 7,081,184 Peruvian pounds. It is possible that minor changes were made in the above items during the closing session, but so far as can be determined these figures are final.

Honduran Economic Conditions.

Consul Robert I. Keiser, Tegucigalpa, May 6.

The trade revival customary in the northern sections of Honduras during the export season for bananas and sugar lacks this year its usual vigor, and a pessimistic tone is noted in the commercial life of that region. There has been a continued shortage of rainfall, which is less than half the previous averages, and instead of an increase in bananas there will probably be a decrease as compared with 1922 production. Sugar cane, however, has been favored by the light rains, and the Sula Valley is expected to yield about 40,000 tons, which is quadruple the amount of last season. The new sugar mill near San Pedro Sula has made an initial shipment of 3,000 tons to the United States. The coffee crop proved satisfactory, and about 5,000,000 pounds will be exported.

Merchandise stocks, although slightly below normal, appear sufficient for the demand, and orders are light. North-coast importers, on account of the inferior quality of 1922 shipments, have practically stopped placing orders for German goods. In the south, where various large German houses are established, imports from that country during April amounted to 44 tons, against an estimated 700 tons from the United States. Household and office articles, hardware, beer, and cotton blankets, were the chief items from Germany.

Financial Obligations Being Met.

Premiums on dollar drafts dropped during April from the recent high level of 12½ per cent, going as low as 7½ per cent in the southern sections. A local loan from the Government was used to pay off some current obligations and assisted in reducing outstanding accounts in the vicinity of Tegucigalpa. While mercantile credits are expanded throughout the Republic, most importers are meeting their foreign bills at maturity.

Progress is Shown in Road and Railroad Construction.

The proposal to increase postal rates to provide revenue for a new post-office building in Tegucigalpa, mentioned on page 837 of COMMERCE REPORTS for March 26, 1923, has been disapproved by Congress. Upon completion of the sewage system in San Pedro Sula revenue from the 1 per cent customs surtax at Puerto Cortes will be divided equally for sanitation at Puerto Cortes and for road construction between San Pedro Sula and Quimistan, near the Guatemalan border. A 12-kilometer extension of the Trujillo Railroad has been placed in service, and it is stated that rapid expansion of this fruit district will soon necessitate additional trackage.

Successful Year for Argentine National Mortgage Bank.

The large increase in the operations of the Argentine National Mortgage Bank (Banco Hipotecario Nacional) is indicated by its annual report, which places the total amount of the loans for the year 1922 at 341,496,000 paper pesos (1 paper peso=$0.36, present rate of exchange), as compared with 169,619,000 paper pesos for 1921. These loans were accorded on 8,410 properties, valued at 756,938,000 pesos, the total number of applications received having amounted to 9,954, as compared with only 5,769 in 1921. During the year "cedula" mortgage deeds were formulated in respect of loans to a total of 273,628,000 pesos, the figure representing, in part, the balance of loans accorded in 1921, and the remainder, loans accorded in 1922. These figures, like all the others attained during the year, are the highest ever registered in any one period since the foundation of the institution. The net profits of the bank for 1922 were 11,362,664.62 pesos. The increase in the movement of mortgage bonds (cedulas) in 1922 was marked; figures covering their circulation at the close of each of the past four years are as follows: December 31, 1919, 612,445,575 pesos; 1920, 620,255,250 pesos; 1921, 699,735,725 pesos; and 1922, 910,458,050 pesos. Circulation by March 31, 1923, had reached 940,443,150 pesos. Since then the circulation has reached 1,000,000,000 pesos, which is the limit authorized by the charter of the Mortgage Bank.

Exports of Sugar from Matanzas to United States.

Vice Consul William A. Smale, Matanzas, Cuba, May 9.

Nearly all the sugar centrals in the Matanzas district finished grinding by the end of April, and as a result the supply of labor for other industries is becoming very plentiful. This annual release of labor at the end

of the sugar season is usually accompanied by a fall in wages, though up to the present no reduction has been reported.

The declared exports from Matanzas to the United States during April are an indication of the present productivity of the district. These exports included 31,104 tons of sugar, valued at $3,370,000, and 106,129 pounds of henequen, valued at $5,650.

Satisfactory Economic Trend in Salvador.

Consul Lynn W. Franklin, San Salvador, May 5.

The tendency toward more stable economic and trade conditions in Salvador prevailed throughout the month of April. A healthy increase in foreign commerce was manifest by customhouse reports; and heavy shipments of coffee, the country's main crop, continued, with a larger percentage to the United States than in 1922. Crops of coffee, sugar, corn, cotton, indigo, and henequen are said to be normal and to compare favorably with those of last year.

Exchange rates rose during the month, the average being 2.07 colones to the American dollar. The proposed budget has not yet been approved by Congress, but the intention of the Government to keep expenses within the national income is evident. Some highway construction was resumed, particularly on the road from San Salvador to the Guatemalan boundary through Ahuachapan, and on the one toward the city of Santa Ana. Completion of the first will mean 10-hour communication with Guatemala City. Prospecting is still in progress for paying veins of gold, silver, and lead.

Additional information regarding Latin America appears in this issue under the following section:

Automotive products: Marine engines market in Yucatan needs development.
Commercial law: Taxation of foreigners doing business in Haiti.
Tariffs and trade regulations: France-Guatemala commercial treaty effective.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

CONSUMPTION OF GOLD IN INDIA.

Consul General R. P. Skinner, London, England, April 7.

The persistent demand for gold has been, and is now more than ever, a notable factor in connection with Indian business, according to a recent report upon Indian affairs by the chairman of the National Bank of India (Ltd.). At times during the last few weeks there have been orders from India in the London market for two and three times more gold than the quantity available for sale.

The increased demand during the first three months of the current year resulted in an importation amounting to approximately 150,000,000 rupees ($50,000,000), or more than three times the amount for the same period last year. Returns from Bombay (at present the center of the Indian bullion trade) confirm the report that there is no slackening in the demand. Heavy shipments to the interior are reported as averaging 9,000,000 rupees during some weeks (1 rupee=$0.31, at present exchange). A part of this gold is hoarded by the natives against a rainy day or converted into ornaments, while a part is held in reserve in the business centers for trade purposes. Just at present an important factor is the gold requirement in India, which is needed in balancing the excess of exports.

The trade returns of India show that the value of gold imported, including both private and Government purchases, aggregated 108,072,973 rupees for the calendar year 1921, while exports reached 304,440,730 rupees, leaving a surplus of exports valued at 196,367,730 rupees. In 1922 the situation was reversed with imports reaching 295,287,290 rupees. Great Britain, China, the Straits Settlements, and the neighboring islands are frequent customers in the Indian gold market, and during 1921 and 1922 Japan received 171,680,060 rupees' worth, probably in connection with the repayment of money borrowed by the Indian government during the war. Approximately 96,030,000 rupees were also sent to the United States, which was an unusual operation.

During the two years under review there was also a surplus importation of silver, valued at 300,173,911 rupees. Some justification for the purchase of the precious metals in such volume is found in the change which took place in the trade adjustment of India, creating a credit balance of 113,000,000 rupees for 1922, including treasure, a condition which is being continued into 1923.

World Production and Indian Imports of Gold.

The world production of gold amounted to 15,959,643 fine ounces in 1921. During the preceding 20 years the average annual production was as follows: From 1891 to 1895, 39,412,823 fine ounces; 1896 to 1900, 162,234,698 fine ounces; 1901 to 1905, 78,033,650 fine ounces; 1906 to 1910, 104,857,875 fine ounces; 1911 to 1915, 111,062,228 fine ounces; and 1916 to 1920, 94,815,597 fine ounces. The following table shows the Indian imports and exports of gold during these periods and the ratio of the net imports to the total world production.

Indian imports and exports of gold.

Periods.	Imports.	Exports.	Net imports.	Ratio of net imports to world production.
Annual average during five-year period ended Mar. 31:	*Fine ounces.*	*Fine ounces.*	*Fine ounces.*	*Per cent.*
1895	2,868,727	2,481,267	387,460	0.93
1900	5,827,040	1,876,105	3,950,935	2.40
1905	12,482,853	7,601,829	4,881,024	.62
1910	8,225,134	5,001,642	3,223,492	.30
1915	24,509,873	3,952,147	20,557,726	18.60
1920	16,238,370	5,375,991	10,862,379	11.59
Year ended Mar. 31:				
1921	3,727,589	2,907,032	820,557	.51
1922	1,710,500	2,049,292	[1] 338,792	[2]
1923 (first 11 months)	5,027,297	17,904	5,009,393	[2]

[1] Excess of exports.

[2] Figures not available.

These figures do not include the gold that goes over the border into India free of duty, which amounts to a considerable sum annually. Packages of gold bullion are also shipped as private purchases by parcel post, which are not always accounted for in the returns.

Bars of gold, each valued at 3,000 rupees ($1,000), are sent to India in large quantities as "good luck" presents from friends in foreign countries. It is reported that from one country alone this has amounted to 2,613,000 rupees ($871,000) during the current year.

Trade of Foochow in 1922.

Consul Ernest B. Price, Foochow, China.

The steadily rising trade of Foochow, China, maintained during the first nine months of 1922, was offset by the rapid drop in the last quarter. This resulted in a decrease of $241,579 in the net value of the trade of the port, as compared with 1921, the total for 1922 being $24,854,144.

Imports of foreign flour showed a substantial gain and represented the reentry of American flour into this market. The imports of foreign cotton piece goods which recorded gains during the year were drills, jeans, cambrics, lawns, muslins, velvets, and velveteens. Imports of foreign cotton yarn, sugar, and slab tin were the only other items of foreign importation which showed increases. In imports from other parts of China cotton yarn and matches were the only commodities recording a rise.

In spite of the heavy decrease in the trade in the fourth quarter, exports of timber and tea (the two basic export commodities of the port) showed encouraging increases. Paper, which is the third most important export commodity, remained almost steady, as did tin foil. Paper umbrellas, bamboo sheets, olives, and glutinous rice had a good year.

New Industries Planned for Malaya.

Consul General Ernest L. Harris, Singapore.

Extensive experiments in the cultivation of crops other than rubber and coconut are being conducted by the department of agriculture of the Federated Malay States and the Straits Settlements, according to press announcements in Singapore. The object is to determine what crops, especially those of quick maturity, are most suited to native production. The step is indicative of the increasing interest throughout this territory in the development of more diversified production as a result of the recent rubber and tin depressions and the consequent restriction in export acreage.

An area of 450 acres on a new plantation at Serdang has been cleared for the purpose and divided into regular blocks for the planting of various crops. Careful records are to be kept and experiments on short-duration crops will be repeated until definite data are obtained. At the present time there are over 100 different species of plants on the plantation and a large number of different varieties of the same species in a number of cases. The principal crops included in the plan, with the approximate area allotted to each, are the following: African oil palm, 50 acres; limes, 50 acres; sugar, including 23 varieties of Malayan and Javanese canes, 25 acres; kapok, 50 acres; sisal hemp, 25 acres; Mauritius hemp, 25 acres; manila hemp, 4½ acres; roselle fiber, 3 acres; coffee, including robusta and five different Javanese varieties, 10 acres; croton oil, 9 acres; candle nut, 8 acres; cocaine, 5 acres; papaya, 2 acres; and bananas, 457 numbered lots comprising approximately 125 varieties collected from various sections of the Malay Peninsula. The nurseries are well stocked with material for planting to carry out the present program.

The Likin Question To Be Investigated.

The Chinese Ministry of Finance, in preparation for the meetings of the tariff commission, has issued a circular telegram to the Provinces with the object of ascertaining their views as to the abolition of likin. This commission was created by the Washington conference for the consideration of the abolition of likin and to determine the conditions upon which the 2½ per cent surtax may be granted.

Reviewing the resolutions of the Washington conference, providing first for the increase from a nominal to an effective 5 per cent in the customs revenue of China, then to 7½ per cent, and ultimately to 12½ per cent, the telegram requests the finance commissioners and directors of the Chinese customs to make a thorough investigation of the likin question and to render opinions as to a suitable plan to abolish or decrease likin. It is also requested that the real amount of likin collected during 1921, together with the places of customhouses and the number of officials in charge, be submitted. These steps are being taken to enable China to submit constructive proposals to the tariff commission.

Far Eastern Trade and Economic Notes.

Korean Railways May Consolidate.

It is reported that negotiations for the amalgamation of eight privately owned Korean railways are under way, but as the plan must be submitted to the shareholders of each company it is not expected that the organization of the new concern will be completed before August or September of this year. (The Japan Chronicle.)

Mineral Production of New South Wales.

The mineral production of New South Wales for 1922 is valued officially at £14,274,770—an increase of £266,122 over that of 1921. The aggregate value of all minerals produced in the State to the end of 1922 was £350,113,800. Of this total, £123,453,955 represents the value of coal production. The number of persons employed in and about the mines of New South Wales in 1922 was 30,904—an increase of 1,203 over the number employed in 1921. (Commercial Intelligence Journal, May 12.)

School of Forestry for Burma.

A school for the study of forestry will be opened in June, 1923, in connection with the University of Rangoon, Burma, according to an announcement in a recent number of the Rangoon Gazette. This is the result of two years' persistent efforts on the part of the leading men of the Province to furnish thorough training to natives who already have first-hand knowledge of the country, and is done with the object of exploiting the extensive forests of northern Burma to the advantage of the entire populace.

American Trade Extension in Swatow.

The extension of American trade in Swatow can best be served by placing agencies with local German firms in lines which are noncompetitive with German products, in the opinion of Consul Lester L. Schnare, Swatow. The difficulties of extending American trade in this district are due largely to there being no general American importing and exporting firm represented locally and to the proximity of the free port of Hongkong. Additional information may be secured upon application to the Far Eastern Division.

Japan's Raw-Silk Exports Heavy During April.

According to a supplement to the monthly cable report received from Commercial Attaché James F. Abbott, Tokyo, exports of raw silk from Japan during April amounted to 64,600,000 yen (1 yen=$0.4985), as compared with 38,400,000 yen during March and 53,000,000 yen during February. This is a considerable improvement over the exports of April, 1922, when raw silk valued at 46,000,000 yen was exported. The improvement in Japan's trade balance during April may be attributed entirely to the increased shipments of raw silk, almost all of which went to the United States.

Japanese Business Inflated During March.

Heavy inflation in Japanese business enterprises during March, and additional capitalization, are shown in the Mitsui Bank report. The greater part of this new capital was absorbed by banks, trading and shipping companies, railroads and manufacturing plants. During the month 90 new corporations were projected, as compared with 60 during the preceding month, and 20 corporations increased their capitalization either by floating loans or issuing new stocks. The new corporations were capitalized at 200,516,000 yen—an increase of 158,251,000 yen as compared with new capitalization during February—while additional capitalization of old concerns during the month amounted to 88,737,000 yen, which was a gain of 20,352,000 yen over the preceding month. (Japan Advertiser, Tokyo.)

Public Markets Designed to Lower Living Costs in Japan.

A law passed in the last session of the Diet, designed to lower the cost of living, is to be promulgated shortly by the Japanese Government. It authorizes the Agriculture and Commerce Department to provide low interest-bearing funds, totaling 50,000,000 yen, to establish public markets in Tokyo, Osaka, Kyoto, Nagoya, Yokohama, and Kobe. Three of these cities (Osaka, Kyoto, and Kobe) already have made application for loans from this fund. The department now is drafting regulations in regard to the sale of commodities in these markets and it is expected that these regulations, together with the imperial ordinance specifying the date on which the law becomes effective, will be promulgated in September or October of this year. (Commercial Attaché James F. Abbott, Tokyo.)

March Wholesale Prices in India.

The all-commodities index number for India, which rose to 181 in March, showed an increase of 0.6 per cent as compared with its increase during the month of February (July, 1914=100). The average level of the wholesale prices for rice, wheat, and other food grains showed a slight decrease, even though that of rice was higher in Bengal by 4 per cent. Prices for other staple food articles increased. Salt in almost every Province advanced from 6 to 42 per cent. Sugar increased by 12 per cent. The gain recorded for oilseeds and metals was negligible. Hides and skins advanced 9.5 per cent. Building materials showed no change for the month, but a decrease of approximately 4 per cent compared with January. Textiles and textile materials as a whole averaged practically the same as for the preceding month, but raw jute dropped 4 points and raw cotton rose 12 points.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business, nationality, as well as side lines handled. The suffixes "A" or "B" added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed, and copies can now be obtained from the bureau or its district and cooperative offices by referring to the titles and file numbers.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau** and its **district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Yarns, woolen, camel-hair, and mohair.	*6698	Berne, Switzerland	Do.
Tobacco	‡6670	Cologne, Germany	Do.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists of importers and dealers. Most of these lists indicate the relative size and importance of the firms listed, their character of business, nationality, as well as side lines handled. The suffixes "A" or "D" added to the file numbers indicate that the lists are revisions of former lists, the new compilations being more complete and reliable than the original. All of these lists have been mimeographed and copies can now be obtained from the Bureau or its district and cooperative offices by referring to the titles and file numbers:

American firms, China	FE–13027–D.
Boots, shoes, and leather, importers and dealers, Dutch West Indies	LA–36004–A.
Building materials, importers and dealers, Siam	FE–17017.
Business firms, British Honduras	LA–26004.
Confectionery, importers and dealers, Japan	FE–11002–A.
Druggists and chemists, British Malaysia	FE–18019.
Drugs and chemicals, importers and dealers, Indo-China	FE–16008.
Drugs and chemicals, importers and dealers, Siam	FE–17008–A.
Dry goods and clothing, importers and dealers, Jamaica	LA–34028.
Electrical machinery and supplies, importers and dealers, Ceylon	FE–22015.
Electrical supplies, importers and dealers, Canary Islands	EUR–11006–A.
Groceries, importers and dealers, Siam	FE–17019.
Hardware, importers and dealers, Ceylon	FE–22014.
Hardware, importers and dealers, Indo-China	FE–16007.
Hardware, importers and dealers, Siam	FE–17020.
Hospitals, Mexico	LA–30078
Iron and steel, importers and dealers, Belgium	EUR–1028.
Leather, importers and exporters, Japan	FE–11021–A.
Leather, importers and dealers, Portugal	EUR–10032.
Lumber, importers and dealers, Costa Rica	LA–23014–A.
Lumber, importers and dealers, Panama	LA–28014–A.
Machinery, importers and dealers, Indo-China	FE–16009.
Machinery, importers and dealers, Philippine Islands	FE–25017–A.
Mines, Mexico	LA–30079.
Musical instruments, importers and dealers, Japan	FE–11047.
Office supplies, importers and dealers, Australia	FE–23044.
Oil and petroleum, importers, Great Britain	BE–2035.
Petroleum companies operating in Colombia	LA–14024.
Tobacco and tobacconists' supplies, dealers, Canada	BE–1035.
Vegetable oil mills, Japan	FE–11020–A.

AUTOMOTIVE DIVISION MEETS NEEDS OF ITS INDUSTRY.

The Automotive Division of the Department stands ready to aid any American exporter of passenger cars, motor trucks, motor cycles, replacement parts, automotive accessories, service-station equipment, motor boats, marine engines other than Diesel, airplanes and their equipment, in entering foreign markets or increasing business abroad and in contact with other Government bureaus. The division is in immediate touch with all members of the industry direct, as well as through the following associations: National Automobile Chamber of Commerce, Motorcycle and Allied Trades Association, Motor and Accessory Manufacturers Association, Automotive Equipment Association, National Association of Automotive Equipment Manufacturers, National Association of Engine and Boat Manufacturers, and the Aeronautical Chamber of Commerce. All of these associations have foreign-trade committees cooperating closely with the division through contact, assistance, and counsel. Over 1,500 automotive firms are already using the division's facilities; new ones are establishing contact right along.

The division receives reports from every part of the world on the current and potential markets for automotive products, covering competition and prices, merchandising and servicing policies, road mileage, fuel facilities, customs tariffs and regulations, import and export statistics, and current market conditions. These reports are analyzed and made available to exporters through confidential circulars, COMMERCE REPORTS, and the trade and daily press. Lists of foreign automotive importers and dealers, supplemented by reports stating their facilities and standing, are compiled in conjunction with the Commercial Intelligence Division and furnished to American exporters on request, direct or through bureau's district or cooperative offices. Frequent assistance is given to individual firms by securing special market reports for them or by aiding them through the foreign offices of the Bureau of Foreign and Domestic Commerce in establishing suitable connections.

The program of the division for the coming year calls for the compilation of an automotive foreign trade manual, which will be furnished to exporters at a nominal price and will place on the export manager's desk an excerpt of the division's comprehensive file of automotive market information. The addition of two merchandising experts to the present staff, one covering motor vehicles and the other looking after accessories, replacement parts, and equipment, permits the division to keep up with the specific needs of the industry.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

Herbert Hoover, Secretary of Commerce — Julius Klein, Director Bureau of Foreign and Domestic Commerce

Selling Oversea Customers "What They Want."

Writers and lecturers on foreign-trade promotion have insisted that Americans must accommodate their export production to the likes and dislikes of the foreign customers. One hears this same demand made of the mills in Great Britain, despite the fact that British mills have gone so far toward satisfying the whims and caprices of a varying multitude of customers, in the innumerable small markets of the world, that they find it absolutely impossible to put any appreciable percentage of their plants on a mass-production basis. Each mill turns out a large number of small quantities, involving constant readjustment of machinery and organization.

American mills have two alternatives—to follow the British custom and reorganize their mills accordingly or to make the radical effort to "sell" in the world's markets their quantity production of fewer designs.

The first alternative has been forced on many American mills during the past two years, when domestic distributers bought in "hand-to-mouth" quantities, and one hears from producers that orders of this character are not at all to their liking. Still, the experience proved that American mills can manufacture and sell on this basis if necessary.

On the other hand, can the "simplification program"—the policy of fewer standard products—be applied to oversea markets? The United States prides itself (and rightly) on its tremendous advance in salesmanship and advertising. Certainly there is no reason why a concentration on foreign sales campaigns similar to that applied to domestic sales should not result in oversea "*mass distribution*" of our mass production. In a number of lines of goods we can sell the peoples of the world—ultra conservative as they sometimes are—"what they want" and still supply the goods from domestic stocks without much, if any, alteration in design.

Such a sales campaign requires patience and consistent effort in season and out, and we must not forget that there is no nation in the outside world to-day that can be sold as if it were a State in the American Union.

The Time to Secure Export Business.

An American manufacturer of a well-known specialty recently paid a visit to the Bureau of Foreign and Domestic Commerce. The purpose of his call was to secure data on foreign markets for his product. He explained that, while he was working at full time for immediate delivery, he sensed a falling off in domestic demand. Consequently he wished to turn to the export field as an additional trade outlet, since by so doing he could continue to maintain production at normal levels in the face of possibly diminished demand at home.

Such an attitude is to be highly commended. For whether the manufacturer is right or wrong in his diagnosis, the time to go after export business is when domestic business is good. Demand abroad can not be built up on royal roads or through whirlwind campaigns. Sustained effort is the vital factor in gaining foreign orders, and if the American manufacturer wants to be sure of oversea trade when domestic demand is dull, he must start the effort in the face of prosperity at home.

Furthermore, just as a manufacturer must take his foreign trade when he can get it, once he gets it he must hold onto it. It would be far better for the manufacturer mentioned above not to seek foreign markets at all than to get a foothold and then withdraw at the first signs of domestic prosperity. By the latter course he would not only impair his own chances of reentering the foreign field but would bring American export methods into disrepute in those markets from which he had withdrawn.

Framing an Export Policy.

The European manager of a large American house, after having performed excellent services in the foreign field for several years, recently informed a representative of the Department of Commerce that he was sending in his resignation. He explained that this

action on his part had been made necessary because his board of directors could not appreciate that there are fundamental differences in the situation at home and abroad. Consequently, they would not permit him to organize his foreign plans in a manner designed to meet the peculiar and varying conditions in Europe.

Every venture in the foreign field involves not only the technical and highly specialized problems peculiar to each industry but also problems that relate to general economic conditions. It is particularly important that all these factors that now interplay in Europe should be given weight in framing an export policy. Success will not be measured in terms of immediate gain so much as in terms of long-run profits over a period of years.

The Department of Commerce is expending money to obtain from its foreign representatives month by month an unequaled cable service on commercial conditions in all the leading countries of the world. This cable information is reinforced and supplemented by detailed reports from foreign representatives who have made a specialty of analyzing commercial and economic phases. This service is for the business executive. It is to assist him in obtaining a knowledge of the economic foundation in foreign countries on which he can build his long-run policy. Executives are urged to follow the cable service closely and to apply to the bureau for information not only regarding the strictly technical problems that they encounter in their export work but also in connection with those factors on which they will base their policy.

Opportunity for American Trade in Burma.

Burma, the great eastern frontier State of the Indian Empire, entered upon a new era politically and economically on January 1, 1923, when its first governor was installed and its reform constitution, said to be the most liberal in the Indian Provinces, became effective. The Province is not only free from debt, but has a working balance to carry over into its next budget. Thus assured of greater freedom from Indian authority and an opportunity for self-development along lines best adapted to its needs, Burma may be regarded as an attractive potential market for American goods.

During 1921–22 our total business in the markets of Burma amounted to practically $7,671,000, or 4.6 per cent of the country's total foreign trade. While these figures, comparatively speaking, are not impressive, there are many indications that the purchasing power of the people is destined to be increased through expansion of both production and exports, and Burma should not be overlooked in any consideration of world markets.

American exporters seem justified, therefore, in pushing certain well-established lines for which an enviable reputation has already been created in Burma. Our share of the iron and steel, automobile, general hardware, and machinery trade nets the United States annually a considerable sum. This amount can be not only maintained but substantially increased by continuing the same vigorous methods that American representatives are employing to meet European competition in other Far Eastern markets.

QUERIES OF GENERAL INTEREST.

Briefly answered by the Bureau.

Q. Is it possible for American business men planning a trip to Europe to obtain letters of introduction through the Department of Commerce?

A. Address a letter to the Bureau of Foreign and Domestic Commerce, stating your name and business, points to be visited, and number and date of your passport. A letter of introduction to the foreign representatives of the Department of Commerce will then be forwarded.

Q. To what extent do goods made in Canada enjoy any concessions in duties in the other British areas?

A. Australia, British India, Straits Settlements, Malta, Bermuda, and Newfoundland are important British areas where no concession in duties is made to goods made in Canada as compared with those made in the United States. Negotiations are now going on between Canada and Australia for an exchange of preferential rates. The following is the full list of British areas granting any measure of tariff preference to Canadian products: The United Kingdom (including northern Ireland), Irish Free State, New Zealand, Union of South Africa, southern Rhodesia, northern Rhodesia, except Congo Basin, British Guiana, British Honduras, Trinidad, Barbados, Grenada, St. Vincent, St. Lucia, Dominica, Antigua, Montserrat, St. Kitts-Nevis, Virgin Islands, Jamaica, Bahamas, Cyprus, Samoa, and Fiji. The measure of concession varies, being in some cases no more than 3 or 5 per cent of the value, and ranging up to about 15 per cent.

Q. What is the responsibility of partners in a limited liability partnership in Porto Rico?

A. The managing partners are responsible for the debts of the firm with their entire private and personal assets. The silent partner is responsible only for the amount contributed to the partnership. He has no part in the active management.

Q. What are the regulations concerning the use of billboards in Uruguay?

A. There are no billboard regulations in Uruguay beyond the occasional notices on walls of public and private buildings forbidding any form of placarding. Advertising by means of billboards has not been developed to any considerable degree in the country.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.

DULLNESS PERSISTS IN ITALIAN INDUSTRY.

Based on cable from Commercial Attaché H. C. MacLean, Rome, Italy, May 31, with cooperation of consul at Palermo, Sicily.

The slackening of Italian industries, which began to be apparent about the beginning of the year, continues to characterize the business situation. This is particularly marked in the textile industries, which last year were the firmest of all Italian trades. Bank clearings in April, though lower than in the early months of the year, remained higher than in the corresponding month of last year; and, in spite of the industrial depression, business conditions appear to be improved. The present government has been granted authority by Parliament to conduct the financial affairs of the State during the next fiscal year without prior approval of the budget. Imports for March were greater than in the year previous, and exports also were higher. The trade balance is slightly more unfavorable than last year.

Government Authorized to Operate Without Budget.

The Italian Parliament has now granted to the Mussolini government the Esercizio Provvisorio, i. e., authority to conduct the financial operations of the State until the end of the next fiscal year (June 30, 1924) without previous approval of the budget. This has been the general practice since the war and does not mean that no estimate of receipts and expenditures is to be made; in fact, a statement has already been issued of the probable income and expenditures under various heads, and a reduction of the deficit to 1,187,000,000 lire has been promised. Previously the Government had the Esercizio Provvisorio extended to June 30, 1923, so that the new action is merely an extension of present privileges for another year.

The discussion of the new tariff has been delayed pending a report by the special committee which is attempting to reconcile differences of opinion. The policy of the Government is to oppose the proposed reductions in duties on manufactured articles. Few changes in the tariff schedule are anticipated, which will affect American trade interests.

In common with other Latin European currencies, the Italian lira of late has shown a tendency to decline, but the drop has not been marked enough to have particular significance. The quotation on April 30 (noon cable buying rates, New York City) was 4.91 cents, and on May 29 it was 4.77½ cents, a drop of less than one-seventh of a cent.

Short-Term Notes Increased.

The Treasury statement for April 30 shows an increase of 1,329,000,000 lire in cash holdings and an increase of 862,000,000 lire in the debit balance. The amount of short-term notes outstanding on that date was 10,041,000,000 lire, an increase of 78,000,000 lire during the month. The note circulation of the banks of issue on April 30 was 16,685,000,000 lire, compared with 17,034,000,000 lire on March 31. In the case of the Bank of Italy, there was a decrease of 447,000,000 lire during the month in notes issued on account of trade. Discounts amounted to 6,269,000,000 lire, compared with 6,052,000,000 lire a month earlier, an increase of 217,000,000 lire.

The combined statement of the principal private banks of May 31 showed deposits amounting to 2,220,000,000 lire and loans and discounts of 8,011,000,000 lire, compared with 2,199,000,000 lire and 8,079,000,000 lire, respectively, on February 28.

Bank clearings for April, though lower than in the first months of the year, show an improvement over 1922. Clearings this year to date have been as follows: January, 65,872,000,000 lire; February, 51,900,000,000 lire; March, 54,637,000,000 lire; and April, 52,893,000,000 lire. In April, 1922, clearings amounted to 40,018,000,000 lire.

The situation with regard to capital for industrial investment is improved, and in general private finances are satisfactory. The Navigazione Generale Italiana is to increase its capital by 139,000,000 lire to 300,000,000 lire, and the Terni Co. is to raise its capital by 120,000,000 lire to 200,000,000 lire. The total capital increases planned amount to more than 500,000,000 lire. The Italian Government has purchased the controlling interest in the Dutch oil refinery at Fiume, called the Photogen Refinery.

The prices of securities on the exchange have reacted sharply and are turning definitely downward. There seems no immediate likelihood of a resumption of the upward movement previously reported. Commodity markets are generally dull, with prices remaining steady.

Seasonal Industrial Depression.

The industrial depression which exists at present is to some extent seasonal. The textile industries, however, are less active than they have been for a considerable time. In spite of a reduction in prices, domestic demand has failed to revive, and in export markets strong competition is encountered. The production of cotton goods is reduced, and purchases of raw cotton are small. The woolen mills report scarcity of orders for the winter season. The engineering trades also are dull; but, in spite of these unfavorable industrial features, the general business situation in Italy is improved.

The present agricultural outlook is promising. Wheat is average in condition and growth, and sugar beets are satisfactory. An increase of 25 per cent over last year is predicted in silk production.

Expansion of Foreign Trade.

Both imports and exports in March were higher than in the corresponding month of last year, but the unfav-

orable balance was somewhat greater this year. Exports amounted to 873,000,000 lire compared with 716,000,000 lire last year, and imports amounted to 1,455,000,000 lire compared with 1,311,000,000 lire.

Ocean imports in April consisted of 976,000 tons of coal (including overland imports), compared with about 900,000 tons in April, 1922, and imports of grain totaled 286,000 tons compared with about 225,000 tons. Imports of metals reached 13,000 tons; phosphate rock, 45,000 tons; mineral oil, 52,000 tons; cotton, 12,000 tons; and general merchandise, 193,000 tons. Total ocean imports amounted to 1,577,000 tons in April, 1923, compared with 1,214,000 tons in April, 1922.

Conditions at Palermo.

The American consul at Palermo reports an increase in exports of sulphur and a decrease in shipments of lemons. Imports have decreased notably, except of American sugar. The abundant wheat crop in Tunis will affect local purchases of wheat from other regions.

UNCHANGED INDUSTIRAL CONDITIONS IN CZECHOSLOVAKIA.

Based on cable from Acting Commercial Attaché H. Lawrence Groves, Prague, June 1.

Industrial conditions in Czechoslovakia remained practically unchanged during May. The cost of living, unemployment, and commercial failures continued downward. A deflation of the note circulation, with a steady exchange and lower discount rate, indicates a favorable condition of Czechoslovakia's public finances, while private finance, as shown by a continued decrease of bank clearings, is not as satisfactory. Probably the most favorable indication during the month is that exports increased considerably.

Steady Note Circulation and Exchange—Discount Rates Lowered.

The note circulation of Czechoslovakia decreased slightly to 8,887,000,000 crowns on May 23 (2,465,000,000 crowns below the legal limit) from 8,930,000,000 crowns on April 23. The metallic reserve, composed mostly of silver, increased to 904,000,000 crowns from 843,000,000 crowns; total reserves, consisting of the metallic reserve, commercial paper, foreign securities, etc., amounted to 3,446,000,000 crowns, as compared with 3,950,000,000 crowns on April 23.

Exchange rates continued practically steady during May, the crown being quoted on the Prague exchange on April 25 at 34.10 crowns to the dollar, and at 33.80 crowns on May 29. The New York cable rate for one crown was $0.0296 on April 30, and $0.0298 on May 29.

The official discount rate was reduced from 5 per cent to 4½ per cent, and the rate of advances from 7 and 7½ per cent to 6½ and 7 per cent, effective May 28, in order to facilitate credit operations. At the beginning of this year the official discount rate was 7 per cent. This high rate was used as a means of overcoming currency speculation, which had forced the crown to depreciate during December. With an effective control over the foreign exchange supply it has been possible for the Government to lower the above discount rates.

Bank Clearings Continue Decrease—Savings Deposits.

Prague bank clearings from April 24 to May 23 amounted to 5,100,000,000 crowns against 5,470,000,000 crowns between March 24 and April 23. Clearings for previous periods this year were as follows: December 23 to January 23, 5,300,000,000 crowns; January 24 to February 23, 6,500,000,000 crowns; and February 24 to March 23, 5,140,000,000 crowns; making a total of approximately 27,510,000,000 crowns so far this year. This amount is about 30 per cent of 90,331,300,986 crowns, the total bank clearings for 1922.

Savings deposits amounted to 9,421,000,000 crowns on April 30, representing an increase of 199,000,000 crowns during the month and 721,000,000 crowns, or 8 per cent, since the beginning of this year.

Cost of Living, Unemployment, and Commercial Failures Declining.

The cost of living in Czechoslovakia continued to decline slightly during April. According to the Government statistical office, the April retail index figure for group 1 (covering 23 necessities, such as foodstuffs, fuel, etc.) was 927 as against 926 for March and 962 for December. Group 2 (covering textiles, shoes, and men's hats) decreased to 1033 from 1047 for the previous month and 1107 for December. The Government wholesale price index (covering foodstuffs and industrial products) was 1029 for April, as compared with 1031 for March and 1078 for December. Thus retail prices show a decrease of 5 per cent and wholesale prices of 6 per cent since the beginning of this year.

Unemployment has steadily decreased from 340,000 at the beginning of May (later official figures are not available). Commercial failures reported during April numbered 366, against 409 for March, 426 for February, and 616 for January. Approximate losses during April amounted to 96,000,000 crowns, as compared with 95,000,000 crowns in March.

Coal Production.

Coal output during January, February, and March, 1923, amounted to 7,370,000 metric tons, an increase of 840,000 tons, is thus indicated when compared with the total output for the last quarter of 1922. The production of coke increased noticeably during this period and was exported principally to Germany and Austria.

Exports Increasing.

April exports amounted to 857,000 metric tons, valued at 1,055,000,000 crowns, consisting principally of sugar amounting to 225,000,000 crowns; coal and wood, 156,000,000 crowns; cotton manufactures, 134,000,000 crowns; woolen manufactures, 102,000,000 crowns; and glass, 77,000,000 crowns. Exports increased 153,000,000 crowns, or 17 per cent, from 902,000,000 crowns in March.

Total exports for the first four months of 1923 amounted to 3,487,000 metric tons, valued at 3,605,000,000 crowns, as compared with 9,455,023 metric tons for the whole of 1922. Thus, quantity exports for the first third of 1923 amounted to about 37 per cent of the total for last year.

DECREASED ACTIVITY IN BRITISH INDUSTRIAL CIRCLES.

Based on cable from Commercial Attaché Walter S. Tower, London, May 31.

Continental conditions continue to influence British industrial progress. During May most lines of trade showed a slackening tendency. Considerable labor unrest was in evidence. On May 21 the total number of unemployed showed an increase of 38,000 over the previous week, but on analysis it is ascertained that this increase is due entirely to conditions in the cotton centers. British national finance continues favorable, the total budget surplus for the period April 1 to May 26 amounting to £21,724,443.

Trade Revival Depends on Continental Conditions.

During the month of May a quieter tendency was evident in most lines of trade. It is thought that any hope of material improvement in British industry and trade during the rest of the year depends mainly upon the removal of the adverse influence caused by unsettled conditions in continental Europe. Another force which is acting as a brake on business is the feeling that present commodity price levels are too high. This is particularly true in the case of raw materials and fuel.

It is the general opinion that the new Government will give a good business administration, particularly in the handling of financial and economic problems like the reparations question. There is an increasing demand from all quarters for the settlement of the Rhur and reparations question, owing to the fear that European markets will collapse if the deadlock is prolonged.

Government Finances Again Showing Surplus.

British budget receipts for the week ending May 26 were £10,050,000, and for the present fiscal year £128,116,364. Budget expenditures for the same week were £5,714,000 and for the present fiscal year £106,381,921, a total budget surplus of £21,734,443. The floating debt on May 26 stood at £776,005,000. The stock index of the Bankers' Magazine declined one point to 118. This decline, the first since last December, reflects domestic political uncertainty and the effects of continental developments. Much interest has been displayed in reports from the United States that the American Treasury has ceased to purchase silver under the Pittman Act, because of the possible effects upon international silver markets and the trade conditions throughout Asia.

Scarcity of New Contracts in Basic Industries—Coal Production.

New orders for iron and steel are less in evidence owing to the current high prices and to the hope that a Ruhr settlement will bring them down. The coal trade is busy executing old contracts and forward buying is not so active as in the previous month. The prices of raw materials and fuel are unfavorably affecting other industries, notably textile, engineering, and shipbuilding.

The British output of coal for the week ended May 19 was 5,796,000 long tons, showing that the high rate of production is being steadily maintained. No general trouble in the coal-mining industry is anticipated in the near future. The miners' executives, in conference at Blackpool on May 30, have recommended deferring of the vote on the termination of the present wage agreements pending the development of legislation in Parliament to amend the present minimum wage act.

Fresh Strikes Threatened.

In other industries the labor situation is not so encouraging. The railway shopmen have refused to accept proposed wage cuts, leaving the issue up to the railway companies. Some new move on their part is now expected to bring matters to a head. The Dundee jute industry is facing another lockout. The labor difficulties among boiler makers are now seriously handicapping British shipyards, and the shipbuilding prospects are less bright since new contracts reported are not sufficient to offset current launchings.

The total number of registered unemployed on May 21 was 1,207,000, an increase of 38,000 over the previous week, mainly due to conditions in the cotton centers of Lancashire and Cheshire. If these districts are excluded, the rest of the country shows a decrease of 11,000 in unemployment during the week. However, the present total unemployment figure represents a substantial reduction from 1,485,800 unemployed on January 1 of this year.

Rise in Wholesale Prices Checked.

Some relief from the handicap of high prices may be seen in the slight reduction shown by the Economist index of wholesale prices, which now stands at 163.8, a fall of 1.2 from the figure of a month ago. This compares with 152.3 on January 1.

FAR EAST.

DECREASE IN INDIAN FOREIGN TRADE DURING APRIL.

Based on cable from Vice Consul Harold Shantz, Calcutta, May 30.

India's exports decreased in April, but the favorable trade balance was maintained. The bank rate was reduced on May 25 from 8 to 7 per cent. Money is easier and general business is quiet but steadily improving, with an increasing demand for machinery and construction materials. Stocks of gold are being absorbed. The demand for silver is declining. The price of rice and cotton shows a substantial decrease and wheat exports are increasing.

India's Foreign Trade in April.

India's foreign merchandise trade for April, aggregating 517,800,000 rupees, while still showing a favorable balance of 95,800,000 rupees, represents a total decrease of 19,600,000 rupees, compared with March, as the result of a decline in exports. Imports advanced from 185,400,000 rupees in March to 200,000,000 rupees in April (an increase of 14 per cent), whereas exports, amounting in April to 306,800,000 rupees, including 12,800,000 rupees of reexports, registered a decline of 25,600,000 rupees, or 7.8 per cent. Compared with April, 1922, the total trade shows an increase of 100,800,000 rupees, of which 32,600,000 is credited to the advance in imports and 68,200,000 rupees to exports.

The following table shows the principal Indian imports and exports for March and April, 1923:

Principal Indian imports and exports in March and April, 1923.

Articles.	March.	April.

NOTE.—The figures for March are corrected from COMMERCE REPORTS of May 7, page 342. Exports for March were 312,000,000 rupees, reexports 14,400,000 rupees, and imports 185,400,000 rupees. An error in the cable caused the mistake in the former issue.

Money Easier—General Business Quiet but Encouraging.

The Imperial Bank of India announced on May 25 the reduction of the bank rate from 8 per cent (in effect since January 11) to 7 per cent. Money is reported much easier than for some months and the continued prosperity of the country is reflected in the increased purchases of factory supplies, materials for construction, and articles of luxury, notwithstanding the duty upon the latter.

The exchange market continues weak and the recent vigorous efforts to restore the former rate of 1s. 4d. per rupee have failed. The opinion prevails that until the Indian producer finds a steady and not a fitful world market the exchange and currency system will be ill adjusted.

The Calcutta cross-rate of rupee-dollar exchange on New York declined during May as compared with April and showed considerable fluctuation between $0.3125 at the opening of the month and $0.3099 on May 29. The average for the month was $0.3108, as against $0.2891 for the same month in 1922.

Government Securities Improved.

The viceroy of India has certified the Finance Bill, putting the increased salt tax into immediate effect. This determination of the government to achieve a balanced budget despite the objections advanced in India has had a pronounced effect upon the demand for high-grade securities. The lowered cost of treasury bills increased their sale for the week ended May 5 (the latest report available) by over 7,000,000 rupees, while the ratio of metallic reserve declined for the week from 63.42 to 62.46 per cent.

During April and May all issues of bonds available were in demand and the improvement in the credit of the government of India assures a lower rate of interest on the year's loans. Sanction has been obtained from the government for raising a loan of 10,000,000 rupees ($3,333,000) for improving the canals of the Punjab, and an appeal has been made to the people of the Province to finance their own canals by home borrowings. The Calcutta Improvement Association has also applied for permission to float a loan of £700,000 (10,500,000 rupees) at 6 per cent in London.

Gold in Demand—Silver Declining—Bank Failures.

Stocks in gold are being rapidly absorbed owing to the upcountry offtake. The immediate demand for silver is reported as falling away since the fear of a duty on silver has practically disappeared, and fairly large stocks are on hand. The proposal of the retrenchment committee to replace 1-rupee notes by silver rupees, if carried into effect, would result in fresh purchases of silver but not in sufficient quantities to make any impression on the silver market.

The failure of the Alliance Bank of Simla and the suspension of payment by two other small native banks, incident to a resulting feeling of uncertainty among the depositors, caused a temporary flurry in banking circles. The proposal of the Imperial Bank of India to assist the depositors of the Alliance Bank and the failure of runs on other banks in good standing restored confidence before the close of the month.

Market and Crop Conditions.

The piece-goods market remains dull but steady. Trade centers report a lack of confidence in purchases for the future. There have been no large clearances, and merchants are watching carefully the trend of prices. The plague has subsided, and buyers from the interior are again in the field but regulating their purchases according to actual requirements.

The market for raw cotton is firm. On May 30 it was quoted at 502 rupees per 784 pounds, or a decrease of 12 rupees compared with the previous month. Raw jute is quiet, and manufactured jute goods are moving in narrow limits. Mills are disposed to meet buyers but shippers show little interest.

The advance in rice noted during February and March was checked, and the price of 440 rupees per 7,500 pounds, quoted on May 30, shows a decrease of 14 rupees for the month. The demand for vegetable oils is generally limited. Linseed oil dropped from 14 rupees and 3 annas per hundredweight in March to 13 rupees and 9 annas. Castor-oil prices, however, advanced steadily, due to a scarcity of seed.

Although the amount of sugar changing hands has been limited, prices have advanced as a result of local speculative operations and reduced stocks.

The hide market of Madras is firm with a strong demand for a limited supply. Notwithstanding steadily advancing prices, resulting from an increased demand from Europe and America, a good turnover is recorded each week in Cawnpore goatskins.

The wheat market is steady and exports are increasing.

Crop conditions have continued favorable, and general forecasts remain from good to normal. Harvesting has progressed satisfactorily and some new crops are being offered in market.

Labor Unrest Affecting Trade.

A continuation of labor troubles among the mills in Bombay district has prevented the owners from accepting offers for cotton products at current prices. Another strike of the oil workers is affecting all the oil companies of the Burma oil fields. The strike of the employees at the dockyards of Colombo, Ceylon, which affected the foreign trade, was practically settled by the 1st of May without granting the concessions demanded.

IMPROVEMENT IN JAPANESE TRADE WITH UNITED STATES.

Based on cable from Commercial Attaché James F. Abbott, Tokyo, June 1.

Considerable improvement was shown in the trade between the United States and Japan during April, which resulted in a favorable trade balance of 33,000,000 yen for Japan. Exports of raw silk to the United States amounted to 27,300 piculs, while silk textile exports showed an increase over March amounting to 500,000 yen. Japan's imports of American cotton increased, while Indian cotton imports declined. The season of heavy imports for Japan is about to close and shipments of the new silk crop will soon commence.

Trade between the United States and Japan during April showed considerable improvement over the preceding month. Both imports and exports registered increases. Japan's favorable trade balance with the United States in April amounted to 33,000,000 yen, as compared with 9,000,000 during March and 25,000,000 yen in the preceding month (1 yen=$0.4985). The outstanding features during the month were increases in the Japanese exports of raw silk and silk textiles to the United States and Japan's increased imports of American cotton and automobiles.

Exports of raw silk and silk textiles increase.

Total exports from Japan to the United States during the month were exactly half the total shipments during the first three months of the year, aggregating 75,000,000 yen, as compared with 46,000,000 yen during March. This improvement is due to the increased shipments of raw silk to the United States during April, which amounted to more than half as much as the combined shipments during the first quarter of the year and almost double the export of this item during the month of March. Silk textiles shipped to the United States also showed an increase of 500,000 yen over March. These increases are due primarily to the fact that the American raw-silk and silk-textile buyers were holding off during the early part of the year in the hope that prices would drop. The expected drop did not materialize, however, but the declining stocks in the United States forced the buyers into the market. Japan's exports of both cotton textiles and cotton yarn to China during April showed decreases.

Imports of American and Indian Cotton.

Japan's imports from the United States during April amounted to 42,000,000 yen, an increase of 5,000,000 yen as compared with the preceding month. The tendency of Indian cotton imports to displace American cotton, which has been apparent for some time, was reversed during the month of April. Imports of American cotton increased by 86,000 piculs (1 picul = 133⅓ pounds) as compared with April, while imports of Indian cotton declined 351,000 piculs during the same period. This change in the cotton movement has resulted partly from lower quotations of American cotton. The only other important increase in the imports from the United States was in automobiles.

Season of Heavy Imports for Japan Nearing Close.

The decline in Japan's importation of practically all kinds of raw materials and machinery is to be expected at this season, as the months of April and May mark the close of the season of heavy imports and the commencement of the period when exports may be expected to increase. The factories have by this time stocked up with raw materials and machinery, and the new silk crop will soon start moving.

Principal Japanese Imports and Exports in March and April.

The leading commodities entering into Japan's foreign trade during March and April, according to preliminary figures based on quantity when possible, are shown in the following table.

Principal items imported and exported by Japan during March and April, 1923.

Articles and countries of origin and destination.		March.	April.
IMPORTS.			
Raw cotton:			
India	piculs	910,000	559,000
United States	do	149,000	236,000

Other countries	do	12,800	9,500
Total	do	98,500	98,300

STEADY AND SUBSTANTIAL PROGRESS IN SOUTH AFRICA.

Based on cable from Trade Commissioner Perry J. Stevenson, June 1, with cooperation of Consul M. B. Davis, Port Elizabeth.

The Union of South Africa is moving along a sound path. A high daily average of output is being maintained in the gold mines. With the improvement in the diamond market, increased production is anticipated, and additional mines are being reopened. Excellent crop prospects, particularly of corn, have brightened the agricultural outlook. Prices of wool are easier; skins are firm; mohair is quiet and better grade ostrich feathers greatly improved. Building is very active, with a satisfactory demand for iron and steel and timber. Prices of American cotton goods are lower, with competition keen.

Little Change in General Situation.

During the first five months of 1923 business in South Africa has been maintained and the outlook is favorable. General conditions continue to improve though betterment in the financial situation has been slow. Six new mining registrations, involving a substantial amount of capital, took place during April. Merchants are exercising utmost caution in placing orders. The agricultural position has been considerably improved by the prospects of excellent crops, especially corn. Building and construction work is especially active. Several fairly extensive schemes for modernizing central residential and business town properties are at present under consideration. Unemployment is becoming less.

There is considerable offering of outbound freight, particularly for corundum, wet hides, and sheepskins. Greater activity in the amount of coal shipped at Delagoa Bay is noted. Stocks of motor cars are normal, or a little below; imports during the first six months of 1923 are estimated at 4,000 cars. The bill prohibiting the manufacture, sale, or importation of adulterated leather, which was referred to the board of trade and industry, will seriously affect imports of shoes and leather if enacted into law.

Gold Output Declines—Mining Industry Active.

Production of the Transvaal gold mines for the month of April was 743,651 fine ounces as compared with 761,586 fine ounces in March. These figures show a decrease, compared with March, of 17,935 ounces, but the daily average output was better, as April had two working days less. The value of the April gold output at par (85s. per ounce) was £3,160,517, and at the declared value (87s. 6d.) £3,253,473. At the end of April the gold mines employed 178,337 natives as against a total of 181,473 at the end of March. While most of the gold mines are making very satisfactory profits and are on a dividend-paying basis, some are being operated at a loss. Mine supplies are still being bought on a very conservative basis, principally in the secondhand market.

Conditions in the diamond industry continue unchanged. Sales are picking up, with a demand from America for the finest class as well as secondary stones. During March the output of diamonds showed a further increase, being valued at £380,200. The number of natives employed in the diamond mines at the end of March and April was 1,273 and 1,866, respectively. The Crown Diamond Co. is expected to start production within the next fortnight.

Cotton and Corn Crop Estimates—London Orange Shipments.

According to an official forecast of the Department of Agriculture at Pretoria, the condition of the cotton crop in the Union this year is very good and a crop of at least 4,000 bales (double last year's crop) is expected. The probable production of corn is placed at 50,000,000 bushels. The South African orange season in London has begun, the first consignment comprising 279 cases having arrived. It is expected that about 400,000 cases of oranges will be shipped this season, which ends about October. Last season the number of cases shipped totaled about 350,000.

Commodity Markets.

Stocks of wool are negligible with easier prices. The mohair market is quiet. Skins are firm. Ostrich-feather sales are increasing, the price for the better grade having greatly improved. Iron and steel prices are steady. Business in the timber trade has been satisfactory and prices are firm, but an advance is expected. Stocks are nearly normal. The demand for electrical goods is improving. On account of lower prices the American position in the cotton-goods market has improved, although keener competition is being met.

Change in Mozambique Convention.

According to a dispatch from Lourenco Marques, dated April 25, the policy of the Portuguese Government in maintaining the status quo under the expired Mozambique Convention until further notice underwent a change on that date when it was decided to charge the ordinary duty on imports from the Transvaal, with the exception of essential food stuffs, such as dairy produce and vegetables. Under the convention, products were admitted to Mozambique free of duty.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

DANGER SIGNALS.

Our goal at present—and we are not far from it—is to increase export sales of cars and trucks to the point where they will amount to 10 per cent of the total production; ultimately they should reach the 25 per cent mark. Our best selling argument is "low price, combined with quality and service." The Government representatives in foreign countries are constantly on the watch that those standards to which the American manufacturers live up to in the domestic field are also maintained by their agents abroad. Whenever American officials abroad express the belief that in a foreign market prices of some cars are out of line with those of competing makes, that in some instances stocks of spare parts are inadequate, and that high service charges are causing dissatisfaction among the car-owning public—South Africa, Japan, and the United Kingdom have at one time or another been mentioned in this connection—then the individual manufacturer should not lose any time, but should investigate whether he and his agents are among those who offer our European competitors an opportunity to depreciate the high reputation of American automotive merchandising and servicing.

AMERICAN AUTOMOTIVE EXPORTS CONTINUE INCREASE IN APRIL.

Exports of automotive products from the United States during April showed a further increase of 12 per cent, the total volume having reached the value of $17,646,949. Shipments of American cars and trucks from the United States increased in number 13 and 41 per cent, respectively; but these gains were offset by the lessened shipments from Canadian factories, where exports of cars decreased 31 per cent and trucks 32 per cent in number.

Canadian Exports and Foreign Assembly Sales Included.

As nearly all the cars exported from Canada are produced by American factories, Canadian and American export figures will be issued in the future in a combined statement. These combined statistics, covering passenger-car and truck exports by number for the first four months of 1923, are summarized in the following table:

Exports of American cars and trucks during January–April, 1923, by number.

Months, 1923.	United States.		Canada.		Combined.		Total.
	Passenger cars.	Trucks.[1]	Passenger cars.	Trucks.	Passenger cars.	Trucks.[1]	
January	6,044	1,352	4,666	369	10,710	1,721	12,431
February	8,851	1,698	5,668	438	14,519	2,136	16,655
March	11,814	1,564	6,426	883	18,240	2,447	20,687
April	13,352	2,230	4,436	602	17,788	2,832	20,620
Total, 4 months, 1923	40,061	6,844	21,196	2,292	61,257	9,136	70,393
Year 1921	30,950	7,480	9,305	1,421	40,255	8,901	49,156
Year 1922	66,791	11,455	35,394	2,564	102,185	14,019	116,204

In the United States classification, trucks include busses.

In order to secure a complete picture of the number of cars and trucks exported, the sales of one American low-priced car from foreign assembling plants should be added to the preceding figures. These sales totaled 27,111 during the first quarter of the year and 9,514 during April, thus bringing the total exports of American cars and trucks during April up to 30,134. This means that 7.8 per cent of the 381,745 cars and trucks produced in the United States and Canada during that month were shipped abroad, as against an average of 8.7 per cent during the first three months, when total exports, including foreign assembly sales, equaled 76,884 and production amounted to 872,596.

April Car and Truck Exports, by Destination.

Details of the combined figures of Canadian and United States shipments made during April are shown in the following table:

Exports of passenger cars, motor trucks, and busses from the United States and Canada during April, 1923.

[1] Not listed prior to Jan. 1, 1923.
[2] Includes the class valued up to $500.
[3] Listed as British South Africa, on Canadian statistics.

Shipments of passenger cars from the United States increased to Australia, the United Kingdom, Canada, Cuba, British South Africa, Argentina, and New Zealand. The outstanding feature in the April figures is the shipment of 1,350 cars to Spain, where for a long period American car exports had not exceeded 500 per month. Canadian shipments decreased to almost every market, the total for March having been 6,425, as against 4,436 in April. Shipments of trucks from the United States to Spain also were very large, that country assuming the position of leading market for the month. Truck shipments increased also to Norway, Sweden, and Australia, while other markets took smaller numbers. More than half of the Canadian truck shipments were sent to Australia, with South Africa ranking second; New Zealand took 66, British India 42, the United Kingdom 25, and Siam 15.

Other Automotive Exports from U. S.—Canadian Parts.

Motor-cycle shipments during April decreased 30 per cent in number and 33 per cent in value. Automobile-engine exports increased 20 per cent, continuing the enlarged volume after an increase of 264 per cent in March over February shipments. Exports of parts and accessories from the United States increased 20 per cent in value, a surprisingly large gain having taken place in shipments of unit assemblies. Exports of parts from Canada during April, valued at $298,553, showed a decrease of 18 per cent from the March shipments, valued at $363,978.

Other automotive exports from the United States during April, 1923.

AMERICAN ACCESSORIES APPRECIATED BY DANISH CAR OWNERS.

Assistant Trade Commissioner H. Sorensen, Copenhagen, May 4.

The number of cars of a given nationality in a market largely predetermines the demand for accessories that are produced by manufacturers of the same nationality. Thus the fact that there are some 25,000 cars and trucks in Denmark, and that approximately 40 per cent of them are American built, should augur well for a good-sized market for accessories in general and particularly for increasing sales of American makes. Denmark's motorization is progressing rapidly, and American automotive products are gaining in popularity. [Full details on the Danish market for cars and trucks appeared in COMMERCE REPORTS, May 28, p. 556.]

Carburetor Market Broadening.

The Danish motor public has not yet come to understand fully that there are both good and bad carburetors; as a result, the carburetor supplied with the car is usually retained throughout the life of the car. For such replacements as are made the German "Zenith" is being sold quite extensively for use on heavy cars. Prices of German carburetors in general range from 85 to 150 crowns. A Danish-made carburetor is sold for 85 crowns, but is not widely used. American carburetors dominate the market, especially one which was intended originally for use on a well-known, low-priced American car but which gives general satisfaction on other makes of light cars. This carburetor owes its popularity largely to its low-selling price, approximately 36 crowns.

The demand for American makes is increasing, and the market will undoubtedly broaden as the motoring public comes to realize and appreciate the technical merits and advantages of the different types of carburetors.

American Storage Batteries Undersold.

American makes of batteries are having a hard time holding their own in the Danish market, the difficulty being chiefly one of price. English and German batteries, as well as domestic makes, are sold at prices ranging from 20 to 25 per cent below the American product; although the American battery is recognized as first class, the price difference limits its sales.

Another reason for the declining popularity of the American battery is the fact that the average European battery is somewhat simpler, having fewer cells. Competition from German, English, and domestic makes is becoming more and more severe. German material is imported into Denmark and assembled into a battery sold under the name of N. A. F. (Nordisk Akkumlator Fabrik). It is an 85-hour battery and sells for 110 crowns—at the present rate of exchange, about $20. [New York exchange on May 4 stood $0.187 to the Danish crown.]

American Spark Plugs Lead the Market.

The American spark plug dominates the Danish market, in spite of keen competition from German and English makes. It is recognized as giving better service, and one American make in particular seems to be preferred. European competition comes chiefly from German and English manufacturers, the German "Bosch" and the English "Sphinx" being the best known makes. Retail prices run between 3.50 and 4.50 crowns apiece.

Electric Horns Restricted.

Few electric horns are sold, as police regulations prohibit the use of loud-sounding horns and specify that each car equipped with an electric horn must also be equipped with a hand-operated signal horn, preferably of the bulb type. Most of these are of German make. An American-made electric horn is also sold here, but in very limited numbers. Electric-horn prices range from 30 to 150 crowns.

British Motor Cycles Gaining Preference Over Light Cars.

Assistant Trade Commissioner William M. Park, London.

The motor-cycle industry of Great Britain is enjoying better times. Heavier models are becoming more popular and are competing with light passenger cars. Manufacturers of light motor cycles are fairly busy, in contrast to the falling production in passenger cars, both light and heavy models. The cycle manufacturers have been able to reduce prices, and certain types of machines are being offered at pre-war quotations, even though additional equipment has been added. The industry is better off than are many of the small car builders.

The passenger-car industry, on the other hand, is suffering greatly from the effect of the £1 tax, which stimulates the increased production of light cars that are suitable for the British but not for the foreign market. The industry had expected that with the promised change in taxation to a basis of fuel consumption a trend toward heavier cars in the domestic market would take place, hence great disappointment was felt when this measure was not included in the current year's budget. The organization and capitalization of British companies is not such as to permit manufacturers to produce one type of car for the home market and a distinctly different type for foreign fields.

Nevertheless, the demand for heavier cars in the British market is apparent more than ever in the import figures for the first quarter of 1923; these totaled 10,008 cars and chassis, as against 4,830 for the same period of 1922. Imports of 2,092 vehicles during March established a new high record for any one month, the last such record having been the 2,025 in January, 1923.

In view of these increasing imports, many British manufacturers are giving serious attention to the excellent methods employed by their American competitors, and the feeling seems to be growing stronger that some sort of an amalgamation of plants and capital must be effected before the motor industry can be placed on a firmer basis.

Detachable Marine Motors No Longer Salable in Denmark.

Assistant Trade Commissioner H. Sorensen, Copenhagen, May 4.

Outboard marine motors were used quite extensively in Denmark until a few years ago, but have now practically disappeared from the market. A former agent for an American motor which once was sold in fairly large numbers, as well as other former dealers, state that the reason for this disappearance is the general lack of knowledge about mechanics among users. The innumerable complaints and excessive repairs caused by this ignorance made the business unprofitable. Besides the American make, a Swedish outboard motor was used quite extensively; but this machine also is no longer sold. It seems to be the consensus of opinion that no future market exists.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given, further information is not available.]

Algiers.—The contract for extensive improvements at the port of Algiers has been awarded to Messieurs Schneider, Hersent, et Dayde, whose address is Le Creusot, Department de Saone et Loire, France. The work involves a protective jetty 1,530 meters long and 5,175 meters of docks. It is planned to do the work in eight years, and the cost is given as approximately 73,600,000 francs. (Vice Consul David C. Elkington, Algiers, Algeria, April 26.)

Canada.—Representatives, including executive heads, of the Michigan Central, the Canadian Pacific, and the Toronto, Hamilton & Buffalo Railways, met on May 15 at Port Colborne, Ontario, for the purpose of considering the feasibility of a branch line connecting Port Colborne with the three railways above named at Welland, Ontario. This proposition has been brought forward by the industrial growth of Port Colborne, which is at the entrance of the Welland Ship Canal from Lake Erie, and which will also be the entrance of the new Welland Ship Canal, now under construction. Notable among the industries at Port Colborne is the International Nickel Co. (Ltd.). (Consul J. B. Milner, Niagara Falls, May 21.)

Poland.—There is a possibility that four additional beet-sugar plants will be constructed in the near future. The acreage in sugar beets this year is 30 per cent greater than that of 1922. Reference No. 94007. (Consul General L. J. Keena, Warsaw, April 30.)

Canada.—Additional grain-handling facilities are rapidly being provided at the port of Vancouver. Contracts have been let for several, and the building of others is contemplated, so that by 1925 it is estimated that Vancouver will have elevator facilities for handling 4,000,000 to 4,500,000 bushels of grain. (Consul General Frederick M. Ryder, Vancouver, B. C., May 14.)

Spain.—Commercial Attaché Charles H. Cunningham at Madrid cables under date of June 4 that official authorization has been given for the installation of port equipment at Cartagena. The work will include several electric cranes and a converter station. No further details are available.

Far East: Building active in Hawaii.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

NECESSITY OF HOLDING FOREIGN TRADE.

Specialty manufacturers, even more perhaps than producers of staples, should realize the absolute necessity of holding and developing their oversea trade, notwithstanding the present wave of domestic prosperity. The foreign markets in which they sell their goods were won not through any whirlwind attack, but through slow, painstaking selling and merchandising effort, extending in many cases over a term of years. To withdraw from a foreign market is easy; to get back again is very difficult, particularly in the face of the ill will engendered by such withdrawal. The manufacturer who attempts to gain export trade founded on any such "scuttle" policy ruins his own ultimate chances and imperils the success of his brother exporters.

CONDITIONS IN FOREIGN CERAMIC INDUSTRIES.

The Glass Industry in Finland.

There are now about 10 glass factories in Finland, many of which have been greatly enlarged during recent years. These in 1922 produced glass to a total value of 45,000,000 Finnish marks, as compared with 33,720,000 marks in 1921 (1 Finnish mark=$0.193 at par and $0.0277 at present exchange).

The glass industry imports considerable quantities of raw materials, such as silicon, quartz sand, fire clay for making crucibles, and all the chemicals needed in the manufacture of glass. Finland has plenty of quartz but it is inconveniently situated. Large quantities of native quartz were used by the glass factories during the war but are no longer employed since the Belgian and German supplies of quartz sand have become available. The cost of foreign raw materials, however, amounts to only about one-sixth of the value of the production, the raw materials imported by the glass industry in 1920 having amounted to 8,300,000 Finnish marks and in 1921 to only 5,600,000 marks.

Although the Finnish glass factories operate mainly for supplying the domestic demand, the good quality of the products and the favorable rates of exchange have greatly helped exportation during recent years. The chief articles of export are drinking glasses and bottles, which have been shipped principally to Sweden on account of the high rate of the Swedish crown. Windowpanes have been exported to Esthonia and Latvia and in small quantities to other countries. Cut-glass goods have recently become important export articles. Sweden has been the best market for them, but some quantities have also been exported to the Netherlands, England, and South American countries.

In 1922 the exports of glass goods were valued at 5,800,000 Finnish marks, as compared with 6,200,000 marks in 1921, the exports of table glass alone in 1922 amounting to about 5,000,000 marks, as compared with 2,100,000 marks in 1921. The exports of window glass and bottles, however, decreased in 1922, due to the decrease in prices and production costs abroad, whereas they remained the same in Finland. The window glass exported in 1922 amounted to 110 tons, valued at 653,000 marks, compared with 141 tons in 1921, valued at 888,000 marks, while the exports of bottles in 1922 amounted to only 286 tons, valued at 1,150,000 marks, compared with 1,002 tons in 1921, valued at 3,210,000 marks. (Consul Leslie A. Davis, Helsingfors.)

Glass Factories in Poland.

At present there are 81 glass factories in all Poland, 64 being in former Russian Poland, 10 in former Austrian Poland, and 7 in former German Poland. As before the war, various kinds of glass are made. While 51 glass factories are making bottle glass, 17 make plate glass, and 12 manufacture crystal glass. About 60 per cent of the glass produced in Poland is used within the country, leaving 40 per cent for export. Glass is exported principally to Rumania and Hungary. So far as imports are concerned, according to the Commerce Ministry's figures, 7,300 metric tons were imported in 1921, while in 1922 little was imported besides mirror glass, optical glass, watchmaker's glass, and high-grade glass for technical purposes. (Consul General L. J. Keena, Warsaw, April 10.)

Conditions in the Belgian Glass Industry.

During May a slackening in demand has been noted in all the principal markets for Belgian window glass, but factories are generally covered till the close of May. Quotations remain unchanged at 225 to 230 francs for free dimensions, and this figure plus 5 or 10 per cent for fixed dimensions. Two new Fourcault plants are being planned—one at the old Roux factory (four machines) and the other projected at Zeebrugge. The new Libby-Owens plant at Moll, of which the coke ovens are now in operation, will probably begin glass production early in June with two machines having a capacity of 40,000 square meters. In special glass (wire, hammered, and colored) four plants—Roux, Gilly, Fauquez, and Selzaete—are in operation, and three others—Courcelles, Lacomte-Falleur, and Gastelain—are expected to reopen before the end of May. The position of the plate-glass plants remains little short of ideal. (Acting Commercial Attaché S. H. Cross, Brussels, May 5.)

New Glass Company Formed in Prague.

A new company under the title of "Resista" has just been formed at Prague, Czechoslovakia, to manufacture the so-called unbreakable glass invented by Dr. V. Horak at the time he was general manager of the Cavalier Glass Co., at Sazava Buda, which company manufactures a somewhat similar glass under the trade name "Silex." The new Resista Co. is capitalized at 1,200,000 crowns (6,000 shares at 200 crowns each), the crown being worth $0.0298 at present exchange. (Trade Commissioner H. L. Groves, Prague, April 14.)

MUSICAL INSTRUMENT NOTES.

The Piano Industry in Hanover.

German export business in the piano industry has shown a declining tendency since December, 1922, because the prices quoted for export have been higher than those quoted by foreign countries manufacturing

similar grades. Outlets, particularly domestic, were satisfactory after the middle of November, after which period a partial slackening set in. The supply of raw materials has not always been sufficient, many concerns being unable to procure lumber and veneers from abroad because of the depreciation in the value of the mark and the lack of capital invested. Transportation facilities have been exceedingly poor. Sometimes goods were en route three or four weeks longer than the normal time required. Shipments by express from Stuttgart to Hanover, for example, required 18 days. (Consul F. R. Stewart, Bremen, March 6.)

Musical Instruments in Argentina.

There is always a steady demand for pianos in Argentina. German uprights selling at about 1,000 paper pesos (about $360 at present exchange) retail find a ready market. Player pianos are bought in the United States. Phonographs come from the same source, while band and string instruments are obtained in Germany and Austria. (Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.)

American Player Pianos Undersell Australian Product of Same Grade.

A recent report from Trade Commissioner J. W. Sanger at Melbourne furnishes an interesting sidelight on the price question with regard to American player pianos in Australia. A player-piano dealer stated that, in spite of the 45 per cent duty, he can land American player pianos in his store for £100, and that Australian-made goods of the same grade cost him from £140 to £160.

MARKETS FOR OFFICE SUPPLIES.

Good Typewriter Sales in Manchester.

American typewriters occupy a prominent place in the Manchester market. Many American companies doing business in England have either appointed agents or opened branch offices in that city. The demand for typewriters is continually brisk, and while competition is keen from local firms, proper selling and merchandising methods have assured American typewriter manufacturers of a large share in the trade. (Consul Ross E. Holaday, Manchester, England, April 26.)

Fountain Pens and Ink Pencils in Cuba.

American fountain pens are sold in fair quantities in Cuba. There is a certain amount of competition, to be sure, but the quality of the American product has intrenched it firmly in the market. Prospective buyers of fountain pens almost invariably ask for one made in America. The demand for fountain pens is on the upward trend and should increase still more in the near future. With sugar selling at a good price the purchasing power of the Cubans is much greater than a year ago. Importers are still buying cautiously, as they learned their lesson at the time of Cuba's financial crisis. Small orders of fountain pens are usually paid for on the basis of cash against documents. In other cases credit from 30 to 90 days is requested. (Vice Consul James V. Whitfield, Matanzas, April 17.)

Increasing Sales of American Typewriters in Austria.

The sale of American typewriters in Austria is showing a gratifying increase. For the year 1922 about 3,750 typewriters of American origin, valued at approximately $250,000, were sold in Austria, and it is probable that the 1923 total will be larger. German competition, from which American typewriter manufacturers have been suffering severely, is now on the wane. German manufacturers have been forced to quote prices in gold marks, and this price increase has practically eliminated Germany's ability to undersell.

The agent of one of the American manufacturers says that his firm sold in the year 1923, 1,000 typewriters—three-fourths of them in Vienna; that the number sold has greatly increased, as compared with the German machines, and it is estimated that now 50 per cent of all machines are of American make; that the American machines are sold at $90 in spite of the fact that freight and import duties amount to $9 per machine; that, beginning with this year, he has reintroduced sales on installments of $5 per month, especially in the case of the small portable machines; and that about seven-eighths of the machines sold were new. (Trade Commissioner Wm. Ford Upson, Vienna, April 9.)

The Argentine Office-Equipment Market.

The use of modern office equipment and furniture is gradually increasing in Argentina, and the position of the United States in the market is excellent. A small number of German Continental calculating machines and typewriters are sold, but American makes maintain a leading position. No worth-while competition is encountered from European houses in the sale of filing devices and metal cabinets. Wooden desks manufactured locally meet the requirements when quality and finish are not a consideration. (Assistant Trade Commissioner C. C. Brooks, Buenos Aires, April 9.)

The Tampico Market for Typewriters.

American typewriters in the Tampico market far outsell those of any other nationality. During the year 1921 about 900 typewriters, with a local retail value of about $110,000, were imported into the Tampico market. In 1922 this total declined to about 500, which figure, however, does not include typewriters entered at Tampico but consigned to other cities in Mexico. The reason for this falling off is the fact that the oil companies, which are the principal purchasers of typewriters, have large stocks of new machines on hand, which were acquired in certain cases as far back as 1920. Until these are disposed of, buying will be limited. (Consul James B. Stewart, Tampico, May 3.)

Market for Fountain Pens in Brazil.

The great majority of the fountain pens sold in Brazil come from the United States, one American manufacturer having established his name and trademark so well that it is a guaranty of value. The same manufacturer has a local representative, who sells to local importers and stationers, some of the latter in turn distributing to dealers in other parts of the country. Two other American fountain pens are sold, but in small quantities. These are sold only by salesmen who make occasional visits to this market. One German pen (the Montblanc) has recently been introduced, but does not offer much competition. It is of fair quality and its price approximates that of the American pen. No other foreign competition of any consequence is encountered.

It is estimated that Brazil annually imports well over $20,000 worth of fountain pens, of which about 65 per cent are sold in Rio de Janeiro and Sao Paulo. The use of fountain pens is not as general as in the United States, even among the educated classes, but the

number used per capita is increasing. The cause of the less general use is the comparatively higher price resulting from the duty and the revenue tax assessed, and also the low exchange value of the milreis.

In selling fountain pens it is advantageous to have a live local representative handling other nonconflicting lines. He should be allowed to keep a constant supply on hand to enable him to take advantage of all opportunities. While pens sold by such a representative are usually sold on time, he can be asked to pay cash upon receipt of goods. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, April 2.)

Cable review, western Europe: Conditions in South African diamond-mining industry.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

WHERE USEFULNESS OF MIDDLEMAN CEASES.

The principal service usually rendered by export agents and merchants is in connection with the chartering of freight space. A letter written by an American exporter to a well-known foreign importer, which recently came to the attention of the Lumber Division, read as follows: "Our connections are not interested in quoting you c. i. f. prices on such stock." Naturally correspondence was dropped, as the middleman was not rendering the service which the importer expected. The usefulness of the middleman ceases when he fails to render his chief service—that of quoting cost plus the insurance and freight to the foreign importer.

INCREASE IN APRIL EXPORTS.

The total April exports from the United States of all wood and manufactures of wood amounted to $12,035,218, compared with $10,690,681 in March, and $8,577,097 in April, 1922. Thus the increase over the corresponding period of 1922 continued and was even greater for the nine months ending April 30, 1923, than the 27 per cent increase of the previous nine months over the corresponding nine months ended March 30, 1922.

The April exports of logs and round timber included 2,214,000 board feet of hardwoods, 752,000 southern yellow pine, 3,371,000 Douglas fir, and 5,751,000 cedar. Hewn or sawed timber included 153,000 board feet of oak, 19,713,000 southern yellow pine, 18,636,000 Douglas fir, and 2,107,000 cedar.

In April 205,525 railroad ties were exported, 64,664 being hardwood and 140,861 softwood. Of both kinds, 79,418 went to Canada, 41,481 to Honduras, 12,000 to Guatemala, and 10,015 to Mexico. The export of piling was 222,760 linear feet, and of poles 2,418 (number).

Lumber Exports and Countries of Destination.

Lumber (boards, planks, and scantlings) was sent abroad in April to the extent of 150,630,000 board feet. The important softwoods were southern yellow pine 57,517,000 feet, Douglas fir 36,993,000, redwood 5,125,000, western hemlock 4,594,000, white pine 2,083,000, spruce 1,315,000, and cypress 1,192,000. The principal hardwoods were oak 15,598,000 feet, ash 7,573,000 (this being an unusual monthly figure for ash), gum 5,923,000, yellow poplar 1,885,000, and chestnut 1,084,000.

United States exports of boards, planks, and scantlings.

Month and year.	Southern yellow pine.	Douglas fir.	Redwood.	Oak.	Gum.	Total, including all "other."

January, 1923	57,725	31,991	4,093	12,856	4,548	130,772
February, 1923	49,125	36,604	8,615	10,536	3,845	132,544
March, 1923	48,495	41,658	840	12,489	4,179	128,773
April, 1923	57,517	36,993	5,125	15,598	5,923	150,630
Monthly average:						
1913	100,432	56,302	4,325	22,108	6,510	198,005
1921	36,481	37,936	1,324	5,785	2,303	100,587
1922	39,521	51,225	2,762	9,018	3,796	127,744

The countries taking the largest quantities of southern yellow pine lumber in April were: River Plate 21,528,000 feet, Cuba 12,840,000, United Kingdom 4,413,000, Mexico 3,906,000, and Canada, 2,374,000. Of Douglas fir lumber Japan took 10,888,000 feet, Australia 6,830,000, Peru 4,305,000, Cuba 3,858,000. This was the largest monthly shipment of Douglas fir lumber made to Cuba in the last two years, amounting to over 50 per cent of the movement for the year ended April 30 to more than the total 1921 movement, and to 30 per cent of the total 1920 movement, which was the largest in the past five years), China 2,729,000, and Canada 1,652,000.

A large part of the oak lumber went to two countries—7,633,000 feet to the United Kingdom and 4,233,000 to Canada. Smaller markets were River Plate 1,036,000 feet, and Belgium 674,000,000.

Cooperage, Box Shooks, Etc.

Cooperage exports in April were 3,213,767 staves (1,425,533 tight and 1,788,234 slack), 206,525 sets of heading, 144,797 tight shooks, 14,350 slack shooks, and 25,101 empty barrels. Of both kinds of staves, Canada took 1,426,620, Cuba 606,001, Spain 214,270, France 195,756, United Kingdom 126,326, and Portugal 117,658.

The April export of box shooks was 6,713,954 board feet, of which 3,375,125 feet were southern yellow-pine shooks. Veneer and plywood exports in April were 6,850,927 square feet, this being a big increase over the 1,997,446 square feet exported in April, 1922. Other April exports were: Hardwood flooring, 577,000 feet, and 1,606,595 pounds of doors, sash, and blinds.

MARKET FOR CERTAIN PRODUCTS IN BURMA.

Consul J. P. Moffit, Rangoon, April 16.

Burma is a timber-producing country and exports large quantities of both hard and soft woods, which, within certain limitations, have all of the characteristics of the timbers which may be exported from America. While it is true that a limited amount of timber is brought into Burma from America for special purposes, the quantities are very small and the indus-

tries requiring such timbers thoroughly understand the special requirements governing and the trade would not need to be fostered in any way. The chance of creating a demand in Burma for American products would be in such products as box shooks, shingles, and ax and tool handles.

Box shooks would have to compete with those sold in the local market which at the present time are not being exploited seriously by the lumber companies. If the present Forest Service policy of development and exploitation of jungle woods develops as anticipated, it is doubtful if the American box shooks could compete.

Locally made teak shingles cost 65 rupees ($20.34 at April 10 exchange) per thousand in the local market. It would be necessary to overcome the prejudice of the building public before imported shingles would be popular and it is doubtful whether the quantities which could be sold would be worth the fostering of this trade.

Ax and tool handles are already on sale by local agents in the bazaars.

Hickory Used for Springs on Rice Winnowing Machines.

A limited amount of hickory could be sold in this country for use in rice mills where wooden springs on rice winnowing machines are used. Considering the number of rice mills in the country, this item is a fairly large one as there are five springs on each machine. Such springs are made from stock 1⅛ inches thick, 4 inches wide, and about 3 feet 6 inches long. The machines are originally furnished with hickory springs, and these springs are replaced in this country by whatever wood is available, usually teak. The hickory springs will last for several years where a teak spring will last less than a month. At present there is no more suitable wood than teak available for this purpose.

The local timber market can supply all building materials, railway ties, jetty timbers, construction timbers, interior finish and furniture lumber required at a price with which it would be impossible for American lumber to compete.

REFORESTATION IN THE UNITED KINGDOM.

Trade Commissioner Alexander V. Dye, London, May 10.

The difficulty of securing wood products in the United Kingdom during the war led to a program of reforestation being adopted in 1919. This work was placed in the hands of a Forestry Commission, who proceeded with the program as outlined until the beginning of the calendar year 1922, when the Committee on National Expenditure recommended that, due to the necessity for economy, the entire program of reforestation should be scrapped. The cabinet, however, did not entirely abolish the plan, but cut down expenses very materially. The parliamentary vote for the forestry fund amounted to only £20,000, but funds left over from the previous year's activity enabled the commissioner to spend during the year the sum of £398,431. The plan originally called for the acquirement of 92,800 acres by the end of 1922. Although the amount acquired in 1922 was only 23,937 acres for reforestation, the total amount for the three years amounted to 92,426 acres, which was approximately the amount aimed at. The total area planted or sown in trees during the year under report was 10,517 acres in coniferous timber and 176 acres in hardwoods, a total of 10,693 acres.

GERMAN LUMBER MARKET CONDITIONS.

Consul M. K. Moorhead, Stuttgart; Vice Consul Harry J. Anslinger, Hamburg; and Consular Clerk N. B. Dunn, Frankfort on Main.

The situation in the money market in Germany is having a serious effect on the lumber trade. Lumber transactions of the present year are far behind last year's sales. The building trade is at a standstill and official building programs have been abandoned. A general decline in lumber prices took place during the last half of March which continued even more pronounced during the first half of April.

Situation in North Germany.

The import of Polish timber, upon which the German market has been depending, has decreased greatly since the rise of the Polish mark. The present exchange makes contracts impossible. This condition has diverted the Polish trade into the English market. Negotiations are under way with American, Swedish, Norwegian, and Finnish concerns for importation of lumber. The greatest difficulties encountered in these projects are that banks refuse to finance consignments; and it is impossible to obtain credits, even though good guarantees are given. American walnut logs, first and second qualities, southern yellow pine logs and lumber, oak, and poplar were recently found in warehouses in Hamburg. It is reported that these stocks found a ready market.

Railway ties have been in great demand and are difficult to obtain. Germans have repeatedly stated that American ties would be in great demand if cut on German specifications: 2.7 meters (8.85 feet) by 23 to 32 centimeters, (9.05 to 11.6 inches) by 14 to 18 centimeters (5.5 to 7.1 inches). European oak, beech, larch, fir, and pine are used for crossties. The shortage in railroad ties is reported to be due to producers preferring to manufacture lumber for building purposes and furniture from the lower valued woods, which were sold only for railroad ties.

Market Unsettled in Southwest Germany.

The outlook for the building lumber market in Frankfort-on-Main is very unfavorable. Neither private nor public building is likely to increase and no improvement in the money market is in sight. Shortage of credit, the temporary stabilization of the mark, and a flood of offers from the sawmills have led to confusion. Those buyers which bought rough lumber around February 1 now find the same material can be bought for one-half and less. Railway car manufacturers refused to buy their usual spring supplies, even though large reductions in prices were made by the sawmills.

Before the war Germany's supply of peg wood came almost entirely from the United States. During the war domestic production supplied the abnormally heavy demand. Now, however, the German shoe industry is pressing for permission to import a certain amount of American peg wood for first-class heavy wood-nailed shoes on the grounds that American birch is of a harder and better quality than the German.

Forest owners are apparently keeping a part of their timber off the market. In the market for boards no improvement has taken place, and the market in general is dull. Higher prices were asked for 16-foot 1-inch unsorted sawed boards in the Black Forest than in Bavarian districts. There has always been a difference between the prices of these two districts, but not so pronounced as at this time. The business in

sorted boards and pine planks was also dull. Spruce was more called for than fir or pine, but there was no important business in spruce and pine building lumber.

Trend of United Kingdom Trade.

Trade Commissioner Alexander V. Dye, London, May 14.

A large number of brokers' representatives from the United Kingdom are now in the United States endeavoring to pick up bargains or odd lots which might be offered at reduced prices. The difficulty of selling by cable has caused the buyers to go to the sellers in America. The consumption of hardwoods over here, however, has not increased to any marked degree and considerable of the buying at present is going into stock. The demand for southern yellow pine continues good. Considerable interest is now being manifested in the purchase of Russian lumber, as the first open water from that country is now on and importers are endeavoring to dispose of purchases which are now en route. The present political difficulties with Russia have caused considerable apprehension, among timber importers, as to the possibilities of buying timber from Russia in immediate future, and hence has caused a slight rise in prices. Dock deliveries at London continue to increase.

CUTT-OFFS.

Organization of Brazilian Forestry Service.

The Minister of Agriculture of Brazil has appointed a special commission to draw up plans for the organization of a Federal Forestry Service. (Commercial Attaché W. L. Schurz, Rio de Janeiro, March 7.)

Competition in Argentina.

The Argentine lumber market continues to be good, but the buying is cautious, and Brazilian Parana pine is offering formidable competition to southern yellow pine and Douglas fir. Austrian oak is also reaching this market in quantities. (Trade Commissioner George S. Brady, Buenos Aires, April 9.)

Latvian Agreements for Russian and Polish Timber.

Last winter the Soviet Government prepared large quantities of timber in the region of the Dvina for floating to Riga, but until now Russia has not entered into relations with Latvia for settling the floating formalities. Poland is also interested in floating timber to Riga and has opened negotiations with Latvia. (Trade Commissioner Carl J. Mayer, Riga, Latvia, April 15.)

Interest in Russian Lumber.

Belgian merchants are much interested in Russian lumber and the Petrograd forest administration has received proposals to export lumber to Belgium. Timber concessions have been concluded with English and Dutch firms and negotiations are on foot with Norwegian, French, and German firms. (Item from Moscow Economic Life transmitted by Minister F. W. B. Coleman, Riga, March 28.)

Greek Housing Scheme Decree Published.

The following official decree relative to housing in Greece was published on May 18: (1) Land can be taken at the discretion of the Government to be used for the erection of houses for the poor; (2) building material to be used for this can be imported free; and (3) houses will be exempt for 20 years from taxes on buildings. (Cable from Charles E. Dickerson, clerk to the trade commissioner, Athens, Greece, May 31.)

Additional information regarding lumber appears in this issue under the following section:

Cable review, western Europe: South African timber trade satisfactory.
Tariffs and trade regulations:
Argentina—exemption of lumber from import duties recommended.
Poland—exportation of crude lumber prohibited.
Latvia—exportation of aspen wood prohibited.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

PRODUCTION AND CONSUMPTION OF SUGAR IN POLAND.

Acting Commercial Attaché H. B. Smith, Warsaw, April 23.

Except for the sugar year 1920–21, there are three sets of figures available covering Polish sugar production. The Chief Statistical Office, the Union of Polish Sugar Producers, and the Ministry of Industry and Commerce have each furnished production figures for 1913, 1921–22, and 1922–23, varying to a considerable degree. For the crop year 1920–21 the estimates of the Ministry of Industry and Commerce and the Union of Polish Sugar Producers are identical, but a slightly different figure is furnished by the Chief Statistical Office. Polish statistics are in terms of white sugar, expressed in metric tons of 2,204.6 pounds.

Estimated Production and Consumption, 1913—Disorganization of Industry, 1920–21.

Exclusive of Teschen, both the Union of Polish Sugar Producers and the Ministry of Industry and Commerce give production figures for 1913. Estimating present production in Teschen at 60 per cent of the 1913 output indicates a total 1913 production of white sugar in the area now within Polish frontiers of about 583,000 metric tons. Estimated consumption within the present area of Poland, based on pre-war figures of per capita consumption in the various districts applied to pre-war statistics of population, amounts to 274,000 metric tons, with an average per capita consumption of 10.45 kilos. Surplus production over consumption in 1913 was about 308,000 metric tons.

Because of the Bolshevist invasion of Poland in the summer of 1920 and consequent disorganization of industry and Government activities, figures for sugar production are incomplete, and those which do exist are subject to so great an error as to make them practically valueless.

Statistics Show Increase in Production.

Both the statistical bureau and the Ministry of Industry and Commerce give complete figures for 1921–22, differing only by about 1,700 metric tons.

Assuming the higher figure of the Ministry of Industry and Commerce to be correct at 155,000 metric tons, and estimating exports at 20,000 metric tons, on the basis of statistical bureau returns for the period from October 1, 1921, to September 1, 1922, a balance of 135,000 metric tons, or about 5 kilos per capita, is left available for domestic consumption. The net sugar exports as given by the statistical bureau for the calendar year 1921 total 37,000 metric tons. Of this, 25,000 metric tons were exported between January 1 and August 31 and therefore can not be included in the exports of sugar from the 1921–22 crop year.

Production figures from the three sources for 1922–23 differ over a range of about 15,000 metric tons. The statistical bureau's estimate of white-sugar production from the last crop is 255,950 metric tons, the estimate of the Ministry of Industry and Commerce is 267,484 metric tons, and the estimate of the Union of Polish Sugar Producers is 270,435 metric tons. On the basis of roots handled by the refineries and the estimated sugar content of beets, the minimum figure of about 256,000 metric tons appears to be the best estimate of white-sugar production.

Estimates of Polish Consumption and Exports.

Domestic consumption will probably increase with the increased supply this year. However, consumption per capita will probably not exceed 6.5 kilos, even considering the growing industrial demand. On the basis of 6.5 kilos per capita, sugar required for internal consumption will total about 176,000 metric tons, leaving an exportable surplus of approximately 80,000 metric tons. Sugar imports this year may be ignored as too small to affect the foregoing estimate. Of the 2,400 metric tons of sugar imported during the calendar year 1921, 2,200 metric tons were imported prior to October 1, almost entirely for relief operations.

In previous years there has been a tendency to overestimate the amount available for export and to underestimate the amount required for internal consumption. The foregoing figure of 80,000 metric tons for export is based on the best estimates obtainable covering probable shipments this year. Export permits for 69,000 metric tons have already been issued.

The following tables show Polish sugar production, consumption, and export as computed from the most reliable data obtainable, together with the separate estimates of the Chief Statistical Office, the Union of Polish Sugar Producers, and the Ministry of Industry and Commerce. Figures for all the years indicated refer to white sugar.

Market for Soap Materials in the Netherlands.

Consul General George E. Anderson, Rotterdam.

Vegetable oil foots and other by-products of the refining of vegetable oils are being extensively used at present by the large soap and candle factories in the Netherlands. From time to time there is a fair market for these products which merits the attention of American manufacturers.

The soap and candle factories are using comparatively little of the inedible tallows and inedible grease stearin which is usually the first choice in soap and candle materials. Vegetable-oil residues, together with fish and whale oil, are under present conditions receiving most attention from Dutch users.

Dutch Factories Well Equipped—Market for Inedible Animal Fats.

The candle and soap factories in the Netherlands, particularly the former, have very modern plants and are equipped to acidulate and concentrate these oily by-products. The grease or acid oils resulting from this process are split again for the separation of glycerin and fatty acids which are distilled once, twice, or three times, depending on the quality of the material and the lightness of color desired in the distilled fatty acid. The refined vegetable, whale, and fish oils are also hydrogenated and used in the manufacture of soap. At present the candle factories are using to some extent a combination of any or all of these hydrogenated oils with paraffin.

There is a fair prospect for the sale of increased quantities of American inedible tallows and grease stearin, but the market is a difficult one. It can be reached to advantage only by resident agents.

Cheese Production in Greece.

Vice Consul C. M. Corafa, Athens.

Greek cheese production for the season 1922–23 showed a large decrease from the production of 1921–22. The decrease was caused by untimely rains followed by frost and drought. At present there is no Greek cheese on the market. Production for 1921–22 and 1922–23 is shown in the following table.

Kinds.	1921–22	1922–23
	Pounds.	*Pounds.*
Casseri (head cheese)	987,525	564,300
Macaroni (head cheese)	2,295,019	564,300
Cheese sliced in brine	1,645,874	846,450

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

FOLLOWING UP CATALOGUES.

An American field representative in the Near East, in referring to a local potentate who has expressed a certain degree of interest in agricultural implements, pumps, and other kinds of machinery, says: "Although his collection of American catalogues on this subject is probably at this time second to none, there have been no indications during the past year of an intention to purchase." Many times reasonable caution in distributing catalogues abroad will save the useless expense incident to sending catalogues to people who obviously can have no serious purpose in asking for them. The initial expense of sending catalogues to a prospective purchaser certainly justifies a follow-up of some sort. Catalogues may sow the seed, but frequently considerable careful cultivation is required before the harvest can be reaped.

Exports of Agricultural Implements Continue to Increase.

Exports of agricultural implements from the United States increased by more than $200,000 in April, amounting to $3,982,878, as compared with $3,709,743 in March, and with $2,076,518 in April, 1922. Exports for the 10-month period ended April 30, 1923, were valued at $28,515,006. This is a considerable increase over the figure of $16,673,157 for the corresponding period of 1922 and is already far ahead of the total exports for the fiscal year ended June 30, 1922, and also exceeds the exports for the calendar year 1922.

Harrows and plows both showed an increase in value of exports, but a decrease in quantity exported, thereby indicating an increase in price. The March exports of harrows were 2,998, valued at $41,943, and of plows, 18,485, valued at $279,735. The April exports were 1,983 harrows, valued at $59,912, and 15,391 plows, valued at $356,989. Cultivators exported increased both in value and quantity, numbering 2,150 in March, worth $52,419, and 2,653 in April, worth $58,253.

Mowers and hayrakes and tedders showed slight decreases. Harvesters and reapers decreased in value from $412,044 in March to $357,916 in April, while the number increased from 3,418 to 3,421. As in the previous month, most of these machines in April went to France and Spain, whose takings, respectively, were valued at $147,980 and $100,903. Harvesters and reapers exported to the United Kingdom were considerably more in April than in previous months, amounting to $29,117. Other items showed minor changes as compared with March, with the exception of tractors, which again increased, this time by a considerable amount.

The largest increase was in wheel tractors, of which 2,299, valued at $1,015,152, were exported in April, as compared with 1,469, valued at $739,304, in March. Garden tractors, numbering 133, valued at $24,424, were exported in April. This indicates a decrease in the unit price of garden tractors compared with the preceding month, when 92, valued at $23,948, were exported. In contrast with garden and wheel tractors, there was a considerable decrease in exports of track-laying tractors, which dropped from 129, valued at $139,807, in March, to 41, valued at $60,989, in April.

Farm Implements Employed in Yucatan.

Consul C. Gaylord Marsh, Progreso, Mexico, May 9.

Small tools prevail on the farms of Yucatan, although a few of the larger and more complicated implements are used. The principal agricultural districts are rocky and unsuited to extensive agricultural methods. The principal crop is henequen (sisal), without which the State would be of no agricultural importance. Corn is raised locally in primitive fashion, but is important merely as supplying a large part of the local demand. There are four small sugar plantations, which supply about one-fourth of the local demand, and in the vicinity of Merida some truck gardening is done by Chinese who have established themselves in that vicinity.

Fields are cleared with axes and machetes. No plowing or harrowing is done in the preparation of henequen and corn, the suckers of the henequen plant and the seeds of the corn merely being placed in holes in the sparse soil among the rocks. The truck gardens are small and are prepared and cultivated with simple hand equipment. Plows and harrows are used on the sugar plantations, and two American tractors are now being employed.

There are 550 hemp plantations in the State, and practically every one of them has a special machine for stripping the fiber. These machines are operated by oil or steam engines. The steam engines, of which there are about 500, are of American and British origin, and the oil engines, numbering about 50, are of American, German, and British origin.

Seeders, cultivators, scythes, harvesters, thrashers, and other implements are not used in Yucatan. Most of the implements are imported by hardware and machinery dealers, while some of the small implements, such as machetes, are made locally by blacksmiths. Stripping machines are manufactured almost exclusively in Merida, though some orders have been placed for their manufacture in the United States and Spain. Mule carts are also manufactured in Merida.

There is a great variation in the type of credit terms granted, depending on the standing of the purchaser. The heavier imported equipment is ordered by planters direct or through local agents. At present the planters have insufficient funds for making replacements and new installations, and are simply endeavoring to maintain their equipment as best they can until conditions improve.

[A list of hardware and machinery dealers who handle, or may be willing to handle, farm equipment will be furnished on request by the Agricultural Implements Division, or may be secured from the district and cooperative offices of the Bureau of Foreign and Domestice Commerce.]

Additional information regarding agricultural implements appears in this issue under the following section:

Far East: Korean demand for agricultural implements. (See Chosen a potential market for American exports.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Bulgarian Market for Knit Goods.

Bulgaria should offer a fair market for the cheaper grades of hosiery and underwear, especially the former. The greater part of the hosiery that has been imported of late comes from Germany and is of an inferior grade. (Consul Graham H. Kemper, Sofia.)

Greek Rug-Manufacturing Association Planned.

An association of refugees for the manufacture of rugs is the plan proposed by the Greek Ministry of National Economy. The daily output of the association is expected to amount of 240,000 drachmas per day. The drachma is worth $0.193 at normal and $0.018 at present exchange. (C. E. Diskerson, jr., clerk to trade commissioner, Athens, March 31.)

Turkish Mohair Shipments Likely to Decrease.

Reports from Anatolia show that nearly 80 per cent of the Angora goats have been killed for food purposes, and that, as a result, shipments of mohair to Turkish seaports will be small for some years. Approximately 6,000 bales of mohair were sold to American and English firms during February. The demand for finer qualities ruled strong, but arrivals from upcountry were lacking. (Consul General G. Bie Ravndal, Constantinople.)

Polish Trade in Bristles Decreased.

Polish exports of bristles to the United States have decreased steadily from 22,418 kils in 1920 to 10,908 kilos in 1921, 9,728 kilos in 1922, and only 33 kilos in the first quarter of 1923. Exports of bristles to countries other than the United States totaled 58,792 kilos in 1921 (the latest annual figures available). French clothes and toothbrush factories are reported to have recently placed unusually large orders for Polish bristles. (Consul General L. J. Keena, Warsaw, April 24.)

Spain's Artificial-Silk Industry Small.

Manufacture of artificial silk in Spain is limited to one factory, located in the Province of Burgos. The local output is inadequate both as to quality and quantity, most of the artificial silk used in Spain being imported from Belgium and Switzerland. Comparatively little artificial silk is being used in the Valencia silk mills, as manufacturers there are anxious to regain their reputation for silks of the highest grade. (Consul Robert Harnden, Valencia, February 28.)

Madras Piece-Goods Market Dull.

The Madras piece-goods market continues dull, although goods are moving. Grey goods, particularly shirtings, dhoties, saris, and jaconets, continue to sell better than other lines. From 700 to 1,000 packages of cotton cloths from 1921 stocks, it is estimated, still remain in Madras warehouses. but new goods are being issued in the hope of disposing of a certain amount of old stock with each lot of fresh goods. A reluctance to take deliveries has been manifested lately among native dealers, although they accept under pressure. (Consul H. A. Doolittle, Madras, India, April 16.)

Italian Artificial Silk Production.

Italian production of artificial silk during the fiscal year ended June 30, 1922, approximated 2,500 metric tons, with a value estimated at 150,000,000 lire. Italy has four artificial-silk factories, employing about 10,000 workmen and having a capacity of more than 3,000 metric tons annually. Two new mills are soon to enter the field. About one-half of the entire Italian output of artificial silk is exported, which would make the annual consumption of Italy between 1,200 and 1,500 metric tons. Local demand is said to have tripled in the last 10 years, and the tendency is to increase still further. (Consul General John Ball Osborne, Genoa.)

Austrian Wool Is of Coarse Grade.

Austrian wool is so coarse that it is fit only for the manufacture of peasants' rough apparel, blankets, and a coarse cloth called "loden." The peasants spin and weave the greater part of the wool at home during the winter months, having the rough-woven goods milled and finished in neighboring factories. Not more than one-fifth to one-fourth of the consumption of Austrian woolen mills is domestic wool, the greater part of their needs being covered by importing. Fine foreign wools are in demand for the production of carded yarn. Efforts are being made to increase and improve the output of wool. (Trade Commissioner William Ford Upson, Vienna.)

Increased Use of Worsted Yarns in Japan.

Japanese imports of worsted yarns have increased from 3,465,612 kin (1 kin=1⅓ pounds) in 1921 to 12,067,182 kin in 1922. The value of imports for the first quarter of 1923 indicates a slight gain over the corresponding period of 1922. The larger part of these imports consists of serge and mousseline yarns for the local weavers, and comes from European countries, Great Britain and Germany being the chief suppliers. Japanese women are manifesting considerable interest in knitting, and local stores now carry large stocks of knitting yarns. The greater proportion of these yarns comes from the United States, several important American brands being actively represented. (Trade Commissioner Paul T. Steintorf, Tokyo, May 4.)

Condition of the Yorkshire Woolen Industry Unsatisfactory.

The demand for merino goods continues active. Both home and foreign buyers are refusing to consider advanced prices, despite the fact that raw-wool prices at the third London wool auction, which closed May 11, registered advances in some cases. With French and Belgian woolens coming on the markets at lower prices, due to exchange irregularities, British manufacturers find that prices in several lines are determined by imported goods. Margins are cut down more in the weaving sections than in the spinning departments, and, again, top makers are better situated than spinners, although the former are not fully occupied and find their stocks increasing. (Trade Commissioner Hugh D. Butler, London, May 14.)

TURKISH WOOL SITUATION AND OUTLOOK.

Consul General Gabriel Ble Ravndal, Constantinople, April 14.

The great bulk of the wool produced in Turkey from the three wool-producing areas of Roumelia (Thrace), Anatolia, and Syria is of the coarse-wool variety, which is generally used in Europe and the United States for carpet making. There are some other grades produced, but such wool is employed for domestic manufactures. Under the present Turkish tariff act the importation of foreign wool is practically prohibited by the high rate of duty. This levy was made with the idea of keeping up the price of the domestic production, but the measure probably will be changed. Otherwise many of the local factories will be unable to continue the manufacture of cloth because the domestic output of clothing wools is so limited.

For carpet-making purposes the best average grades of wool to-day come from the Angora and Sivas districts in Anatolia. Konia is also a large producing center, but the wool from that region is much dirtier than that from Angora or Sivas. In general, Turkish wool loses 50 to 60 per cent in its change from the greasy to the scoured state. Domestic consumption uses up the colored wool that does not require dyes for such articles as stockings. In some producing centers, lately, colored wool has been worth more than white, although this does not apply in Constantinople.

Apart from the three main centers mentioned above there is much other wool produced in Anatolia. The Black Sea coast is the region that has the smallest number of sheep, often replaced, as at Castamouni, by mohair goats. The Afion Kara Hissar-Eski-Shehir region formerly sent out a high grade of wool, but owing to ravages incidental to war, there are very few sheep left in that region, so that the Angora Province wool can be considered the best that is available at present, with Sivas ranking next.

Production and Shipment of Turkish Wool.

It is very difficult to give any accurate statistics for the production of wool in Turkey at present. Turkey's pre-war output amounted to about 100,000 bales of 280 pounds each. At that time, however, Turkey comprised more territory (Macedonia, Syria, and Mesopotamia) than at present. It is estimated that 6,500 bales were exported from Constantinople to America during 1922. Other wool shipments proceeded to America from the ports of Mersina and Smyrna, with Adalia also sending out a small amount. Mersina has been the biggest port of shipment, both for export to foreign countries directly and for shipment to Constantinople for sale on this market and for subsequent exportation. The reason for this is that the roads were better in the southern part of Asia Minor, so that most of the wool from such regions as Sivas went out via Mersina instead of to Samsoun, which is the natural port of shipment.

During the first four months of 1922 it was almost impossible to sell wool in Turkey or abroad, but in June the export demand began to be felt and prices steadily increased from around 20 to 25 piasters per oke (1 oke=2.83 pounds) in the producing centers, such as Angora, Konia, and Sivas, to from 45 to 55 piasters at the end of December. Prices in Constantinople went up accordingly, from about 45 to 50 piasters per oke in June and July to from the 60 to 70 piasters at the end of the year. Much of this increase was due to the heavy drop in the exchange value of the Turkish pound in October, and the later reluctance of the holders of wool to reduce their prices in Turkish money after the exchange value of that currency improved. The result is that since January 1, 1923, the demand for export has been slack, prices being too high even for the main consuming market in the United States of America.

Prospects for the Season of 1923.

For the coming season of 1923 the production probably will be somewhat larger than in 1922, but still much under the pre-war totals. In such a large producing region as Sivas, for example, it is estimated that there are now only about 40 per cent as many sheep as in 1914. This, however, represents an increase from the lowest number (that of 1919), which was about 20 per cent of the pre-war total. Such smaller flocks, combined with an increased domestic consumption, naturally leave a much smaller exportable surplus.

Anatolia formerly used to export annually to Europe and America approximately 35,000 bales of wool. The abnormal condition of the country having reduced the production by perhaps more than 50 per cent, it is doubtful whether this year's production will attain even half of this amount. At present, according to reports from wool dealers, there are not more than 500 bales of wool in Constantinople. The price advanced from last year's quotation of 40 piasters pere oke to 72, and the present price is 70 piasters per oke ($0.18 per pound).

The Constantinople market in washed wool is becoming more and more animated. The upward tendency of prices in America, and the increased demand, have interested holders, who, as the present stock is much reduced, anticipate an early rise of quotations.

At present shipments from Constantinople is by direct steamer, for the most part. Shipments from Mersina are transshipped at Alexandria or Trieste, as generally they are loaded first on Italian or British steamers.

Exports of Turkish Wool to America in 1922.

According to the declared-export returns for the year, 1922, taken from the records of consular invoices certified at the American consulate general in Constantinople, 1,836,216 pounds of wool, valued at $287,030, were exported to America. During the first three months of 1923, wool was exported from Constantinople to the United States to the amount of $59,302. The amount of reexportations to America of Turkish wool from Liverpool, Trieste, and Marseille is unknown.

[A list of wool exporters in Constantinople may be obtained upon application to the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or to the Textile Division at Washington. Refer to file No. CI-67.]

Bristle Industry of Tientsin, China.

Consul General Stuart J. Fuller, Tientsin.

Bristles constitute one of the leading items of export from Tientsin. According to the Chinese maritime customs returns, exportation of bristles from Tientsin in 1919 amounted to 2,287,723 pounds; in 1920 to 2,506,933 pounds; and in 1921 to 1,890,400 pounds. These figures are the latest ones available, and show that the bulk of the bristles go to the United States. England, France, and Japan, however, share a portion of the trade. The annual declared-export returns for

the same periods show that shipments of bristles to the United States totaled 1,258,784 pounds, valued at $1,857,015, in 1919; 1,649,828 pounds, with a value of $3,547,599, in 1920; and 1,107,003 pounds, worth $1,535,786, in 1921.

Hotou (located at the terminus of the East Grand Canal) is a large distributing center in North China. Here bristles are brought from Tsunhua, Yungping, regions outside the great wall, and Manchuria, and, after being sorted and graded, are sent to Tientsin by junk or railway. Paotingfu and Peking are other large bristle centers, whence shipment is made to Tientsin either by railway or, from Paotingfu, by river. It is believed that the Paotingfu article is slightly inferior in quality to the Hotou product.

Methods of Exporting Bristles from Tientsin.

There are several ways for working the bristle business for export from Tientsin. The principal amount is exported in assortments of 55 or 66 cases, but other assortments containing 8, 40, 100, etc., are sometimes made to meet special demand. Of the usual assortments, the 55 is considered the most desirable because it contains a greater amount of long-length bristles. One of the usual type of 55-case assortments contains about the same number of cases of bristles of each length, from 2½ to 5½ inches. The bristles are packed in cases of 110 pounds net. The 66-case assortment generally sells for about half as much as the 55, which is due to the fact that it contains a very large number of cases of short lengths. Other factors that govern the price are the cleanliness of the bristle, the color, the elasticity, and the degree of solidarity of the bundles.

[A list of Tientsin dealers in bristles may be obtained upon application to the district or cooperative offices of the Bureau of Foreign and Domestic Commerce, or to the Textile Division at Washington, by referring to file No. CI-68. A detailed description of the preparation processes may be procured from the Textile Division.]

Italian Speculation in Cocoons.

Vice Consul Harry L. Troutman, Milan.

A very serious situation for the silk spinners and for the silk market in general has been created by speculation in cocoons, as a result of which the Italian cocoon market is practically cornered. On March 9 cocoons of a grade that give 1 kilo of silk to 4 kilos of cocoons were quoted at 108 lire per kilo. This would make the price of raw silk 432 lire per kilo, whereas on that same date raw silk extra was quoted at 425 lire per kilo. Thus there is shown here a loss of 7 lire on every kilo of silk, taking into consideration only the actual cost of cocoons. To this must be added manufacturing costs of about 40 lire net per kilo of silk, making a total loss to the spinners of 47 lire per kilo. (The Italian lira is now quoted at $0.0477.)

The loss in twisting is even greater. Taking into consideration the cost of cocoons and manufacturing expenses, the total loss runs between 70 and 80 lire per kilo. These conditions are ascribed solely to uncontrolled speculation in cocoons, which has existed in this market for some time past. With the probability of improvement in the lira, the results would be disastrous if manufacturing is continued at the present scale.

The only reasonable and possible solution of the situation is thought to be an immediate and rigorous reduction in production, based on an understanding among spinners and twisters. It is recognized that a prolonged suspension of the industry would be impossible unless industrialists were willing to charge against their annual balances large sums to be paid as indemnities, to insure the return to work of old employees when the new crop is gathered.

Important Italian silk interests are endeavoring to organize an effective defense against this speculation, and in such a way that employees will feel the least injury from the enforced suspension of work in the mills for the period absolutely necessary to restore a proper equilibrium between the cost of raw material and the prices of manufactured products.

United States Cotton Goods Shipped to Noncontiguous Territories.

April shipments of cotton cloths and knit goods from continental United States to Alaska were valued at $13,714; consignments to Hawaii at $248,686; and to Porto Rico, $876,917. Alaska's purchases of these commodities for the month comprised 47,519 square yards of cotton cloth (28,421 square yards of which were piece-dyed goods), valued at $10,184; 795 dozen pairs of hosiery, worth $1,868; and 928 pounds of other knit goods, worth $1,662. Hawaii took 799,789 square yards of cotton cloth, valued at $207,415, and including 156,281 square yards of bleached, 327,931 square yards of printed, and 177,543 square yards of piece-dyed goods; 5,022 dozen pairs of hosiery, worth $16,723; and 17,834 pounds of other knit goods, worth $24,548.

Sales of cotton cloth to Porto Rico in April amounted to 4,574,790 square yards, valued at $796,672, apportioned at follows: Unbleached, 1,235,813 square yards; bleached, 670,043 square yards; printed, 591,966 square yards; piece-dyed, 1,315,405 square yards; and yarn-dyed, 761,563 square yards. Hosiery shipments totaled 40,002 dozen pairs, amounting to $60,610, while other knit goods aggregated 23,433 pounds, worth $19,635.

Cotton Growing in Portuguese East Africa.

Consul Cecil M. P. Cross, Lourenco Marques.

Representatives of the British Empire Cotton Growing Association early in 1923 visited Lourenco Marques and Beira in Portuguese East Africa for the purpose of interesting British farmers in the cultivation of the staple. Though no material results have been attained as yet in Portuguese territory, special efforts made in British Nyasaland may result in the return of cotton to the position of premier crop, thus supplanting tobacco, at present the most popular.

To stimulate production, the British Cotton Growing Association of Manchester is offering to purchase the individual crop outright or to ship and sell it at 1 per cent commission and pay all freight and insurance for the grower by deducting from the proceeds when sold. It also provides ginning and baling facilities at Port Herald. The charges for these services are £10 10s. per ton of lint ginned and baled. Rebaling for ocean shipment is done for £4 13s. 4d. per ton of lint. These inducements, together with the completion of the Trans-Zambezia Railway, promise to increase the margin of profit to the producer.

Syria Exporting Large Quantities of Wool.

There were exported to the United States from the port of Aleppo during 1922 $382,224 worth of wool, The demand from foreign markets was so great that local stocks were completely exhausted before the close of the year. In the two previous years the quantities of wool exported to the United States were almost insignificant. The value of the 1922 exports was not much more than that of the exports in 1912. (Vice Consul T. R. Flack, Aleppo, March 12.)

Additional information regarding textiles appears in this issue under the following sections:

Cable review, western Europe:
Depression in Italian textile industry.
South African cotton goods market.
Cable review, Far East:
Indian piece goods and raw cotton and jute markets.
Japanese silk shipments to United States and cotton imports from United States and India.
Far East:
New cotton depot for Bombay.
Shipments of gunny cloth and raw cotton from India in March.
Tariffs and trade regulations: Guatemala—importation of used empty bags prohibited.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

LOW TIRE PRICES FEATURE HEAVY APRIL EXPORTS.

E. G. Holt, Assistant Chief, Rubber Division.

With a total value of $3,702,748 in April, United States exports of rubber manufactures exceeded those of any month since the 1920 boom period, except March, 1923, when they reached $4,316,176. In April, 1922, the value of exports was only $2,823,099. During the first four months of this year exports have followed the same trend as during the same period of 1922. With a similar tendency for the remaining months of the year, the 1923 shipments would easily surpass $40,000,000, as compared with $33,450,832 in 1922. The factor most responsible for this increasing trade is the apparent ability and willingness of American tire exporters to sell at competitive prices in every foreign market. At approximately equal prices the recognized high quality of American products will assure their increasing sale abroad.

The unit value of automobile casings exported in April set a new low record of $10.28 compared with $10.59 in March; the unit value of inner tubes dropped from $1.65 to $1.56. Canvas rubber-soled shoes were valued at $0.72 per pair as compared with $0.75 in March; rubber packing at $0.45 per pound as compared with $0.51 in March; and rubber thread at $0.98 as compared with $1.03. Solid tires for motor trucks, rubber soles and heels, rubber hose, and druggists' rubber sundries showed no significant price variations, although the value of rubber boots per pair increased from $2.97 in March to $3.16 in April; rubbers from $0.82 to $1.02; and rubber belting from $0.50 to $0.58 per pound. (For price variations during 1922 see COMMERCE REPORTS, May 14, p. 427.) While export prices depend on many variable factors, it may safely be stated that tire prices in all export markets are now at record low levels with no visible sign of upward revision by leading competitors. The only evidences of price increases in other products are to be noted in the unit value of exports of rubber boots, rubbers, and belting.

In April, 166,865 automobile casings were exported; in March the number was 190,468. England, New Zealand, Argentina, Cuba, Canada, Denmark, British South Africa, Japan, and Australia each took over 5,000 casings during the month. Shipments of tubes likewise declined from 134,141 in March to 118,996 in April. Exports of rubber belting, hose, rubbers, canvas rubber-soled shoes, druggists' rubber sundries, and soles and heels were also at a lower rate in April than in March; April exports of rubber thread, rubber packing, and rubber boots increased over those of March.

Important Markets for Canvas Rubber-Soled Footwear.

The season for canvas rubber-soled footwear is now well under way. In January 319,123 pairs were exported, in February 365,126, in March 598,928, and in April 465,198. The principal markets in order of importance during these four months have been Argentina, Cuba, England, the Philippine Islands, and Mexico. In 1922 these five countries took 76 per cent of our exports of canvas rubber-soled footwear. Norway, Denmark, and the Netherlands were fairly good markets in 1922; the two first-named countries have purchased greater quantities during the first four months of 1923 than through the entire year 1922. During April, Newfoundland and Labrador and British South Africa each came into the market for good-sized orders. The South African business should be given careful attention, according to an official Canadian investigator, as it is bound to develop rapidly. It is believed that business in this line can be secured by American firms in Australia and New Zealand. Formerly a large business was done with each of these British possessions, but the preferential tariff policy has aided the business to fall into the hands of British and Canadian manufacturers in recent years. (See rubber export handbooks on Australia and New Zealand.)

United States Tire Exports to Japan and China.

Japan is reputed to have about 10,000 usable motor vehicles, not including motor cycles, about 25 per cent of which are trucks. At the rate of four tires per car annually, about 40,000 tires would be required. Reports from consular officers during 1922 stated that Japanese-made tires secured a large majority of the business, Consul Dickover at Kobe estimating their portion as high as 85 per cent of the total. During 1922 Japan imported practically no tires except from the United States; the United States exported 7,938 casings and 1,868 solid tires to Japan during the year. During the first four months of 1923 the United States has shipped to Japan 16,742 automobile casings and 4,638 solid tires. Obviously these tires are partly for transshipment to other points in the Far East.

China has about 7,000 passenger cars and 500 motor trucks. Japanese tires dominated the Chinese tire market in 1922. Recent reports indicate that the Japanese Dunlop and Hamatown tires are meeting severe competition from an American make which now secures about 40 per cent of the business in the Tientsin consular district where there are nearly 800 automobiles, according to a report from Consul J. C. Huston. French and British manufacturers are doing very little tire business in China. In 1922 the United States exported 4,517 casings and 229 solid tires to China, while during the first four months of 1923 we have shipped 1,490 casings and 216 solids to China. United States tire exports to China are not increasing so rapidly as reports from consular officers stationed there indicate, and it is believed that American tires are being shipped to China via Japan.

Rubber Trade Notes.

Limited Market for American Tires in Tunis.

In the Regency of Tunis there are less than 3,000 motor vehicles, and the present high dollar-franc exchange is a powerful deterrent to the importation of American tires. (Consul Harris N. Cookingham, Tunis, April 20.)

Canadian Firestone Co.

The Firestone Tire & Rubber Co., of Hamilton, Ontario, Canada, began operations in September, 1922, have a paid-in capital of $500,000, and employ about 350 operatives. (Consul Jose de Olivares, Hamilton, May 19.)

Dunlop Tire Competition Unimportant in Mexico.

There are very few Dunlop tires sold in Mexico. The Dunlop is handled by the Four Wheel Drive Auto Co., of Mexico City, and stocks on hand appear to be very small. (Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, April 28.)

Price Cutting Still in Vogue in Chile.

Besides three American makes, Dunlop, Michelin, and Continental tires are represented here, occupying second, third, and sixth places, respectively. Dealers still have large stocks on hand, and price cutting is general. (Vice Consul Ben C. Matthews, Antofagasta, April 25.)

Opening of Chosen Tire Season.

The Japanese Dunlop and Hamatown tires occupy second and fourth positions in the Chosen tire market, four American brands also being on the market. Most of the roads are now passable, and there is quite a demand for new cars. (Consul General Ransford S. Miller, Seoul, April 20.)

Michelin Tires Popular in Austria.

Most of the tires sold in Vienna are Michelins, which are selling at the rate of 10,000 to 12,000 per year. French Goodrich tires are selling at the rate of 5,000 to 6,000 per year. American tires are higher priced and are sold in much smaller quantities. Dunlop tires are not in the market. Only cord tires are in demand. (Trade Commissioner William Ford Upson, Vienna, April 27.)

Michelin Competition in New Zealand Tire Market.

Michelin is the only serious competitor of American tire manufacturers in Auckland, New Zealand; Australian tires offer little competition. Michelin is the leading make in this market at present, and representative prices for Michelin cords are as follows: 815 x 105, £6 18s. 6d.; 30 x 3½, £5; 33 x 4, straight side, £8 14s.; 30 x 3½, fabric, £3 10s. (Consul K. deG. MacVitty, Auckland, April 11.)

Tire Repairs in Greek Macedonia.

Latest official registration statistics covering privately owned cars in Greek Macedonia show 433 motor vehicles; of this number 89 are trucks, 60 of which are on pneumatic tires. There are three firms doing tire-repair work. Generally only inner tubes are repaired, although there is equipment available for retreading casings. Cuts in casings are not repaired and tire life is short on the stony roads. (Consul Leland B. Morris, Saloniki.)

Motor Traders' Association Regulates Tire Discounts in South Africa.

All dealers belonging to the South African Motor Traders' Association are pledged to adhere to the printed consumer price lists issued by South African tire distributers. Consumer discounts of 5 per cent for cash are allowed; any other discounts are irregular and are made surreptitiously. American tires rank first, third, fifth, sixth, and seventh; the order of popularity of foreign competitors being Michelin, Dunlop, and Continental. (Vice Consul Richard R. Callahan, Port Elizabeth, April 10.)

Michelin Price Cutting in Czechoslovakia.

On February 7 Michelin prices were reduced 10 per cent in Czechoslovakia, which reduction was immediately followed by Continental, Dunlop, and American agents. The Michelin Co. is going after the business very strongly, and their local representative states that they are in position to make a further reduction, if necessary, in order to keep a dominating position over American competition. (Acting Commercial Attaché H. Lawrence Groves, Prague, April 25.)

Rubber Footwear Market in Southern Greece.

Shoe merchants in Patras, Greece, usually order for delivery in the autumn. Rubber footwear is imported from Italy and Germany; that imported from Italy may be transshipments from Austria. In 1921, 392 dozen pairs of rubber shoes, valued at about $4,150, were imported into Patras; in 1922, 510 dozen pairs, valued at about $8,500, were imported. Until the general adjustment of credit conditions, it is recommended that American firms require the opening of confirmed, special credits in their own names, available against shipping documents in New York. (Consul George K. Stiles, Patras, Greece.)

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

DIRECTION OF BRITISH STEEL TRADE DURING FIRST QUARTER OF 1923.

Assistant Trade Commissioner H. B. Allin Smith, London, May 15.

One looks for changes of direction in the import and export steel trade of Great Britain during the first quarter of 1923, owing to the much-rumored dislocating influences of the Ruhr occupation on continental industries. Detailed analyses of British returns, however, fail to show any radical changes.

Developments in British Iron and Steel Trade During March.

A few noticeable developments are to be inferred in connection with the British trade in iron and steel for March, which perhaps may be accentuated when the April accounts, just issued in summary, are accessible in detail. For example, larger export quantities are going to the European countries, if the March proportion of 26.2 per cent can be taken as an index. This, of course, was to be expected while continental mills were producing and trading less. In contrast to anticipations, however, and unreconciled with current impressions of trade channels and volume, is the fact that British imports from Belgium, Luxemburg, and France have increased considerably since January, when the Ruhr was entered, along with a slight expansion of imports from the United States. Material from Germany, the Netherlands, Sweden, and other sources, on the other hand, shows a decrease.

The importations of iron and steel from Belgium and France are now at a higher level than in the last pre-war year or in 1920 and 1922. If the industries in those two countries have been retarded seriously by the prevailing political and military policies in the Ruhr, as one is led to believe by press statements, then this growth of shipments to Great Britain can only be accounted for as from stocks on hand, or by diversion from the other markets of those continental countries. Even though they have been withdrawn from these markets, this situation has not yet begun to swell greatly the exports of Britain as an alternative source.

Origin of British Imports.

The following tables (two of the actual quantities and two on a percentage basis) afford a comparison of trade directions for British imports and exports of iron and steel in 1913, 1920, 1922, and the first three months of 1923. The first gives statistics of imports by countries of origin.

Imports of iron and steel into Great Britain by countries of origin.

Countries of origin.	Monthly average.			Imports in 1923.			
	1913	1920	1922	January.	February.	March.	April.

[1] Export percentage calculations assume an equal distribution of the unallocated

United States Steel Exports Continue Growing.

The improvement in the exportation of American iron and steel products observed for March has continued during April, when 179,159 long tons were shipped abroad. This compares favorably with the totals for the previous months of 1923, which were: January, 124,444 tons; February, 135,182 tons; and March, 165,624 tons. Large shipments of spiegeleisen to Belgium were conspicuous in the April trade.

Details of the exportation of iron and steel and their manufactures from the United States during March, April, and the first four months of 1923 are presented in the following table:

Exports of iron and steel from the United States in 1923.

Articles.	March.	April.	January to April, inclusive.
	Tons.	*Tons.*	*Tons.*

Total	165,624	179,159	604,409

A discussion of the various markets that received the April, 1923, exports will appear in COMMERCE REPORTS at an early date.

Italy's Pig-Iron Production Increased by Ruhr Occupation.

Commercial Attaché H. C. MacLean, Rome, May 5.

As a result of the reduced production of pig iron and the increase in prices that took place following the occupation of the Ruhr, Italy has been able to put into operation 4 of its 11 blast furnaces, namely, 2 at Porto Ferraio, on the island of Elba, which contains the country's most important deposits of iron; and 2 at Piombino, on the mainland directly opposite. These furnaces are now producing at the rate of 210,000 tons of pig iron a year, this figure being more than double the 91,000 tons produced in 1922, which included 3,000 tons smelted with charcoal. It is, however, still far below the pre-war average, the production in 1913 having been 427,000 tons. The maximum was reached in 1917 with 471,000 tons, and the minimum in 1921 with 60,000 tons. It is difficult to look ahead, and no prediction for the future can be made with any certainty, but if the present price level continues the production may be still further increased.

Imported pig iron is now quoted at Milan at from 820 to 890 lire per ton (1 lire=$0.0477 at present exchange).

Italian Steel Production and Prices.

Italy's steel production continues at about the same level, a large increase having taken place in 1922 when the production reached 943,000 tons, as compared with 683,000 tons in 1921 and 933,000 tons in 1913. The maximum was an output of 1,332,000 tons in 1917. While the capacity of the existing plants is 1,500,000 tons, including the former Austrian plant at Trieste, it does not appear probable that any further increase is to be expected. Sales of Italian steel have been made recently in Switzerland and inquiries have been received from Hungary and Austria, although it is stated that the Austrian mills are active and that all of the furnaces of the Alpine Montangesellschaft are in operation, coal being supplied to them from Germany.

The statements to the effect that steel prices in Italy had not been materially advanced for fear that consumers would begin an active agitation for a reduction of existing duties, have been confirmed by an important official in the industry. At the time the new rates were fixed users of iron and steel complained that their interests were being sacrificed in order to protect those of the manufacturers and that the increase in duties would increase materially their production costs. Since the occupation of the Ruhr it would undoubtedly have been possible to further increase steel prices in Italy, but it seemed a better policy to avoid the tariff issue that probably would have been raised by such action, especially as the present tariff has never been approved by Parliament and is now being considered by a parliamentary commission that will present its report when the Chamber reopens on May 16.

Situation in Engineering Trades.

The situation in the engineering trades still appears to be very uneven. The manufacturers of railway material continue moderately active, and the automobile trade has been doing well. In general this last-named industry is still suffering from the post-war crisis, and the process of readjustment to the changed conditions that exist has not been completed. During the war productive capacity was rapidly increased. Present demand is limited. The result is an exceptionally keen competition among local automobile manufacturers. Until a further improvement in general conditions takes place many of the Italian machine shops will be obliged to work at considerably below their capacity. This, however, is a situation which has existed for some time past, although conditions are gradually improving.

New Trade with Spain Anticipated for Sheffield.

Consul William J. Grace, Sheffield, England, April 9.

Unusually large consignments of pig iron and crude steel from Sheffield have been arriving at the Hull docks. These are for shipment principally to Spain, although both the Netherlands and Italy are taking heavy amounts from the Sheffield district. Spain, as well as the Netherlands and Italy, previously bought largely from Germany. The shortage of coal and

coke, however, has checked the output of iron and steel so that Germany, for the present, has lost many customers in those countries.

English manufacturers expect to supply Spain with its requirements for the construction of new railways now in progress, including a new line from Madrid to Valencia. This line will serve an extensive agricultural area. The frequent shipments from Sheffield to Hull of iron, steel, and rails for Spain indicates that this district has begun to secure a fair share of this trade. The demand from Spain is largely new.

The steamship services between Hull and Spain are excellent and of great advantage to Sheffield. There is now a direct sailing from Hull to Spain every three days. The cost of freight from Sheffield to Hull is less than to any other port in England and much of this freight can be sent by canal.

Sheffield manufacturers believe that Spain is just on the threshold of a great era of development, and that the iron and steel trade between Sheffield and Spain is bound to increase.

It is reported that the Hull dock sidings contain large quantities of sal ammoniac from South Yorkshire, Sheffield district, and agricultural machinery and heavy road rollers from Lincolnshire. As Sheffield supplies a greater portion of the material in these Lincolnshire manufactures, it thus partakes indirectly in a still greater share of this new trade with Spain.

Activity of Latvian Metallurgical Industry.

Trade Commissioner Carl J. Mayer, Riga, April 6.

The development of the Libau, Latvia, metallurgical industry is hampered seriously by the high prices of coal, coke, and cast iron. In consequence of the Ruhr events, there have been increases ranging from 40 to 100 per cent, according to the director general of the Boecker Wire Works, which is the largest industrial enterprise in Latvia. Under prevailing circumstances it is not easy to find a foreign market for the output of the industrial enterprises at Libau, and since the factories are capable of producing more than can be consumed within the country, they are unable, despite their best efforts, to develop activity to an extent approaching the pre-war level. A stabilization of prices can not reasonably be expected in the near future. The manufacturers, therefore, are not able either to fix firm prices for their goods or to take on larger transactions.

The activity of the Libau Wire Works is gradually being carried back to normal. At present it employs 1,000 workmen and 80 officials. The factory manufactures all kind of nails, wire, cast steel, chains, spades, plows, cast iron, and various other metal goods and semifabricates. While the plant is active only to the extent of 30 per cent of its capacity, it can produce goods valued at approximately 1,000,000 rubles (about $500,000), 35,000 poods (1 pood=36.11 pounds) of nails being turned out monthly. Of this output Latvia consumes only 12,000 poods per month. Orders are coming in in sufficiently large numbers, both from Latvia and the neighboring States, apart from Russian and English orders. During the past two weeks 15 carloads of ironware were exported to Lithuania, where the principal demand is for nails, wire, and agricultural implements. Esthonia takes nails and assorted iron.

Dissolution of the Bandoeng Tin-Holding Agreement.

Consul Renwick S. McNiece, Penang, Straits Settlements, April 13.

The gradual dissolution of the so-called "Bandoeng agreement" has been decided upon according to official notification from the governments concerned. The dissolution is to be effected by the monthly release of 5 per cent of the holdings of each of the four parties to the agreement. The percentage released may be held or disposed of as each party elects. The stocks of tin held total 17,600 tons, and the monthly release thus amounts to 880 tons. At this rate the whole amount will not be released for 20 months, but the notification provides that a variation in the percentage of monthly release may be effected by agreement among the parties, and that such variation will be subject to public announcement.

The parties to the Bandoeng pool and the stocks held by each are as follows: Dutch East Indies government, 2,000 tons of "Banka" ingots and 2,000 tons of "Banka" tin in ore; Federated Malay States government, 10,000 tons of Straits ingots; Billiton Maatschappij, 1,000 tons of Straits ingots; and The Straits Trading Co. (Ltd.), 2,600 tons of Straits ingots.

The holding of these stocks has had a depressing effect on the market and the announcement of their release is timely. The monthly release of 880 tons is not expected to affect adversely the market's ability to absorb them. Each party, moreover, has the election of selling or holding its monthly quota. The present local price—109 Straits dollars per picul (about $0.0043 a pound) is not high enough to warrant the sale by the Federated Malay States government of its April quota without sustaining a loss.

Export of Scrap Metal from Soviet Russia.

Abstracted by the Eastern European Division from Economic Life, Moscow, February 3, 1923. The bureau assumes no responsibility for the accuracy of the data.

The total value of scrap metal exported by the Russian State Metal Sales Bureau (Metallotorg) during the eight and one-half months of its existence, up to January 1, 1923, amounted to £280,000, or 2,500,000 gold rubles. Actual sales concluded in Germany and Italy amounted to 80,000 tons, or 66 per cent of the total quantity exported, representing a gross value of 1,900,000 gold rubles. All of the scrap metal sent abroad was shipped to Stettin or Hamburg, consigned to the Derumetal (German-Russian Metal Sales Co.), by whom it was assorted before selling. Sales were made in marks, with a corresponding hedging in pounds sterling, or at a fixed rate of exchange. The prices varied according to market conditions and the description of the scrap metal, the price for machine shavings ranging between 45.5s. and 51.5s. per ton, and for iron scrap, from 56s. to 66.9s. per ton. The metals went to German, Czecho-Slovak, Belgian, and Swedish firms. Sales to German firms up to January 1, 1923, amounted to 1,500,000 gold rubles and consisted of 25,000 tons of scrap and shavings for 606,000 gold rubles (the actual payment price); six old ships for 870,000 rubles; and old locomotives for 17,000 rubles. Italy bought scrap and cuttings for 95,000 gold rubles.

Cost of delivery of the metal to German ports amounted to about 17.5s. per ton, thus netting, at the selling prices of 55s. to 60s., 24.7 gold kopecks per

pood (36 pounds), f. o. b. Petrograd, for shavings, and 31.6 kopecks for scrap. Overhead expenses in delivery of the ships amounted to about 174,000 gold rubles.

The total sales of colored metal (aluminum, brass, bronze) were 1,100 tons from the ships and 50 tons from the locomotives, the only sales of colored metal exported by special permission of the Council of Labor and Defense.

[Previous reports on the export of scrap iron from Russia appeared in COMMERCE REPORTS of September 4, 1922, page 681, and October 23, 1922, page 220.]

Mineral and Metal Items.

Straits Settlements Require Steel Products.

At Penang, Straits Settlements, there is a good demand for wire nails and galvanized corrugated sheets. (Consul Renwick S. McNiece, Penang, Straits Settlements.)

Tin Exports from Singapore.

During April Singapore exported 4,500 long tons of refined tin, of which the United States took 68 per cent. (Cable from Consul General Ernest L. Harris, Singapore, Straits Settlement, May 24.)

Activity in Construction Work in Indo-China.

Commercial construction recently has been active because of the low price of French structural steel and hardware. The low franc exchange has also been of aid. (Consul Leland L. Smith, Saigon, French Indo-China.)

Brazilian Exports of Manganese.

Exports of manganese from Brazil for the period from January 1 to April 18 amounted to 98,018 metric tons. The figures for shipments during January were 62 tons to Argentina, 7,100 tons to the United States, and 3,150 tons to France; and during February, 40 tons to Argentina, 24,400 tons to the United States, and 7,150 tons to Great Britain. (Commercial Attaché W. L. Schurz, Rio de Janeiro, April 30.)

Mines Reopening in French Indo-China.

There is promise of great improvement in the business situation in Tonkin, recent stagnation having been due to the low price of tin and zinc. Increased prices effective at the close of 1922 have been maintained. Mines are reopening and two are working at full capacity. Two mining companies have applied for the water rights to the falls of Song Nam to obtain electric power to be used in mining. It is predicted that if present prices are maintained the year 1924 will bring a volume of exports equal to the war years. (Consul Leland L. Smith, Saigon, French Indo-China, April 26.)

Production of the Burma Corporation (Ltd.).

The report of the workings of the Bawdwin mine of the Burma Corporation (Ltd.) during March, 1923, shows 23,201 tons of ore mined, and that 24,000 tons of ore milled in the treatment plant produced 11,663 tons of lead concentrate. Approximately 9,491 tons of lead concentrate smelted in the blast furnaces resulted in an output of 3,538 tons of unrefined lead. The tonnage milled included re-treatment of 2,027 tons of tailings. The output of the refinery included 3,612 tons of refined lead and 366,312 ounces of refined silver. (Assistant Trade Commissioner Charles B. Spofford, jr., Calcutta, India, April 25.)

Additional information regarding minerals and metals appears in this issue under the following sections:

Latin America: Mining conditions in Bolivia.
Eastern Europe and Levant: Markets for upper Silesian products.
Tariffs and trade regulations: Canada—new rates on iron and steel products prepared.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

LOWER MEXICO AS A MARKET FOR ELECTRIC SUPPLIES.

Consul O. Gaylord Marsh, Progreso, Mexico, May 16.

The more important cities and towns of the Progreso, Mexico, consular district (Yucatan) have electric plants, principally for the furnishing of light, and incidentally for providing power to small industrial enterprises. Each plant is confined in its operations to its own immediate city or town. The complete absence of water power, the high cost of fuel (charcoal, wood, and crude oil), the great area of the individual hemp plantations, and the distances between cities and towns have limited, and will continue to limit, the electrical development of this district.

Principal Electric Plants.

The most important electric plant of the district is in the city of Merida, which is the capital and largest city of the State of Yucatan. Merida has a population of about 65,000 and is the principal market for electrical supplies. This plant, which has a capacity of about 2,000 kilowatts, supplying both direct and alternating current, furnishes light for the city streets and to about 5,000 houses, power for about 300 electric motors, and current for other operations of a minor character.

The plant in Progreso (which city has a population of about 11,000 and is the seaport and second city of Yucatan) has a capacity of about 300 kilowatts, direct current, and supplies about 500 customers.

The port of Campeche has a plant of about 200 kilowatts capacity; the town of Motul, a plant of about 70 kilowatts; and other smaller towns have plants of varied capacities. There are perhaps 10 individual plants in operation in homes and on plantations.

Character of Equipment and Supplies in Use.

The newer and better equipment of the Merida plant is of American manufacture, though some of the older equipment is of Swiss and German origin. The Progreso plant has American, English, and Swedish equipment. Most of the smaller plants are provided with American and German machinery.

The direct-current feeders in Merida are underground and consist of armored, lead-covered cable; the alternating current feeders are carried overhead on steel poles and have the usual weatherproof insulation.

The direct-current installation was made in 1900, and the alternating current in 1920.

Most of the houses being of stone and therefore of fireproof construction, surface wiring prevails, twisted lamp cord and porcelain knobs being used.

The electrical supplies in common use and demand are rather simple in character, the many modern articles of convenience not having changed the old-established customs of the population. The following, in order of estimated volume of sales (there being no statistics available), are in most demand: Lamp bulbs, motors of various kinds, lamp cord, fans, sockets, and meters. It is estimated that the following are in use in Merida: Electric washers, 1; electric flatirons, 150; electric motors, 300; electric sewing machines, 12; electric pumps, 50. The motors are used in cordage factories, a brewery, a flour mill, moving-picture houses, corn mills, and other small industries.

Packing Generally Satisfactory.

The packing for shipment to this market should be stronger than for domestic shipment in the United States, since merchandise is subject to rough handling in the open and unprotected harbor of Progreso. However, the principal importers of electrical supplies and equipment here state that American packing has generally been quite satisfactory.

Manner of Placing Orders—Financing and Credits.

The largest local firm of importers (a house which handles about 60 per cent of the local business) has a representative in New York who attends to all purchases and to the financing thereof. The other important importers are also large reputable establishments with long-standing connections in the United States. New dealers would have to be treated in accordance with their individual financial standings and credit ratings.

Local Marketing Methods.

The electric plants generally furnish materials for making connections and carry stocks of standard electrical supplies. Hardware dealers also carry stocks of standard articles to supply their customers. Bulbs, lamp cord, sockets, flash lights, etc., are sold from many small stands which buy from the larger importers.

Most of the heavy equipment in the several electric plants appears to be adequate for existing requirements, several new installations having been made during the past five years.

Washing, cooking, sewing, and sweeping are generally done by persons entirely unfamiliar with modern electrical household appliance, and local conditions do not strongly impel them or their employers to adopt any present changes in these methods.

There has not been much general interest shown in radiotelephones here as yet, though about six receiving sets have been brought in and have given good results during the winter months. However, static is extremely bad during the hot season and greatly interferes with the receiving of matter broadcasted in the United States and Cuba. There is no local broadcasting station.

Market Prospects.

There are 550 hemp plantations in Yucatan, each of which is a sort of village in itself, and each of which, upon a return of prosperity, will be a possible prospect for the sale of individual lighting plants, electric pumps, etc.

The prevailing low price of henequen (sisal) fiber, upon which the peninsula of Yucatan is entirely dependent, has reduced the present call for electrical equipment and supplies to an absolute minimum; but with a return of normal conditions the demand should again materially increase.

The United Railways of Yucatan, with headquarters at Merida, which has a trackage of about 500 miles, has an independent telephone system, two electric storage battery cars, and electrically lighted trains.

There is a local telephone company, having about 1,000 telephones in use, and the usual supplies are bought as required. There are about 1,000 automobiles in Yucatan, in connection with which the customary electrical accessories are imported.

Electricity Supply Commission in South Africa.

Consul G. K. Donald, Johannesburg, April 4.

Great interest is being evinced in the recent appointment of the electricity supply commission provided for under the electricity act passed by Parliament last year. The commission, which will shortly hold its first meeting, will be independent of the Government, similarly to the reserve bank and the Rand water board, for it will appoint its own officials, raise its own revenue, and generally act as a separate corporate body. As one of the purposes of the act is to keep the supply of electricity in bulk separate from the railways, the commission will take over the great power station in course of construction at Colenso, which will supply current to the Maritzburg-Ladysmith railroad when electrified. The commission will construct power stations at Durban and Witbank and will provide power near the Sabie gold fields in the Transvaal.

April Electrical Exports Show Slight Decrease.

While the total value of electrical goods exported from the United States during the month of April, 1923, exceeded by $1,201,368 the total for April, 1922, it is $363,651 less than for the month of March, 1923. Shipments during April were valued at $5,981,191, bringing the total for the first four months of this year to $23,439,714, which is $4,460,457 greater than the total for the same period of 1922. Notable strength was shown in the exports of telephone equipment, large alternating-current generators and fractional horsepower motors. Considerable decreases, as compared with the previous month, were noted in power transformers and insulated wire and cable exports.

ELECTRICAL TRADE NOTES.

Hydroelectric Plant in Latvia.

The Latvian Cabinet has allocated the sum of 150,000,000 rubles for the construction of a hydroelectric station in the vicinity of Dahlen. It is intended to make this a means of giving relief to unemployed labor. (Extract from Latvian Press, Riga, April 28.)

New Power Development in South Africa.

The Victoria Falls & Transvaal Power Co. contemplates the erection of a new power station near Witbank, according to a cable dispatch from Johannesburg. It is planned to provide for three 20,000-horsepower generating units. A 70-mile transmission line will be built, and it is hoped to have the station oper-

ating early in 1923. It is said that contracts are now being placed. ("South Africa," May 18.)

Telephone Development in Spain.

There were 223 telephone-exchange systems operating in Spain at the end of December, 1922. These served 81,780 subscribers, of which 23,366 were on State-owned lines and 58,414 on private lines. In 1923, under the existing franchise conditions, 15 of the private systems will be taken over by the Government. These systems have a total of 15,875 subscribers at the present time. (Commercial Attaché Charles H. Cunningham, Madrid, April 26.)

Use of Electricty in Great Britain.

The 1923 edition of the Electrician annual tables of electric undertakings shows that there has been a slight increase in the number of central-station systems, the total being 631, as compared with 624 for the previous year. Operating results from central stations indicate a steady increase in the output of most of the systems. This is, no doubt, to some extent caused by the growth of domestic demand, since there has been no marked revival in industrial consumption in England during the past year.

Electrification of French Railroads.

The Minister of Public Works has just approved the first section of the program for the electrification of the Orleans and Midi Railroads. The electrification program for the Midi, during the years 1923 to 1927, involves 1,576 kilometers and includes, in addition to the line from Toulouse to Dax, with branches to the Pyrenees, work on which is well advanced, the line from Bordeaux to Irun with various branches, and the further extension of a number of short Pyrenees lines. The first division of the program for the electrification of the Orleans Railroad involves the electrification of lines from Paris to Brive, with various side lines. The total length of these planned improvements on this line is 916 kilometers. (Commercial Attaché Chester Lloyd Jones, Paris, May 14.)

PAPER

John Matthews, jr., Chief, Paper Division

Exports of Paper from the United States in April.

From the standpoint of paper shipments, April was not an outstanding month in the export trade of the United States. The total value for the month shows a decline of over 6 per cent from that of March (the high month so far in 1923), although there was a slight improvement over the corresponding month of last year. Of the five more important classes of paper only one (writing paper) shows an increase both in quantity and value over the figures for the preceeding month, but even this item fell below the high mark of April, 1922. Book paper, paper board, and strawboard recorded a higher value for April, 1923, than for the same period in 1922, but the improvement was because the prices changed as the respective quantities were less.

The following table gives the details on the chief items among the paper exports for the months of March and April.

United States paper exports.

	April, 1922.		March, 1923.		April, 1923.	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Newsprint	6,686,098	$308,179	3,978,361	$189,827	2,950,509	$144,861
Book paper	2,336,245	234,816	2,383,962	206,443	2,119,224	243,525
Wrapping, including kraft	3,713,112	203,124	2,561,732	197,180	2,291,564	189,218
Writing paper	716,793	121,045	492,584	81,224	611,301	86,931
Paper board and strawboard	3,803,135	157,708	4,253,288	225,486	3,483,005	187,681
All other	.....	1,139,763	.....	1,364,768	.....	1,329,623
Total	.....	2,164,635	.....	2,324,928	.....	2,181,839

Pulp Wood Stand of Kymmene Company.

Vice Consul Frank P. S. Glassey, Helsingfors, Finland, April 14.

The timber lands owned by the Kymmene Co. A/B, with headquarters at Kuusankoski, Finland, are scattered along the Kymmene River from Kupio to Kavola. It is estimated that the total stand on the 729,907 acres owned by the company is some 7,691,000 cords, 40 per cent of which consists of pine, 32 per cent of spruce, and 28 per cent of miscellaneous woods. During the past few years the company has cleared out much of the birch and aspen, substituting spruce in their place. The forests of this concern are in an easy logging country, the average haul to water for floating being only 2½ miles, with often a shorter distance to a railroad. Slopes are generally gentle and the land is free from large boulders.

One of the most important factors tending toward the cheap production of paper here is the low wage paid to forest laborers. During the past winter the average day's pay earned by a Kymmene workman was 35 Finnish marks (present value of Finnish mark is about 2¾ cents), with a slightly higher wage paid workmen who own horses. During 1921 the cost of operation per cord of pulp wood was as follows:

	Finnish marks.
Felling	36.25
Hauling over 2½ miles	32.63
Floating or freighting	36.25
Handling at mill	36.25
Overhead and miscellaneous	21.75
Total	163.13

This total cost is equivalent to $4.49 per cord.

German Imports of Pulp Wood.

In the past year there has been a considerable increase of German imports of wood to be used for paper production. Total shipments amounted to 469,000 cords, which came mainly from Czechoslovakia. Improvement in the Czech currency and depreciation of the German mark during the latter part of the year tended to curtail the trade. (Assistant Trade Commissioner E. M. Zwickel, Berlin, April 11.)

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

MARKET IN EGYPT FOR PETROLEUM AND PRODUCTS.

Consul Lester Maynard, Alexandria.

Egypt produces crude and refined oil but the output is insufficient to meet all local requirements, and although the yield is increasing the demand appears to be keeping pace. In 1913 the imports of petroleum products were valued at about $3,000,000; the value increased in 1921 to $10,000,000 but declined in 1922 to about $7,000,000. The principal falling off in value was in kerosene which accounts for a decline of $2,000,000.

The United States supplied petroleum products in 1913 to the value of less than $50,000. In 1921 kerosene imports increased to such an extent that petroleum products from the United States were valued roughly at $3,000,000, but the value of the imports from the United States in 1922 was only half the latter amount. The principal decrease in 1922 was in kerosene, which was valued at slightly over $750,000.

Although the values of the petroleum imports during 1922 declined, the quantities showed substantial gains and indicate a steady growth in the market for these products. The following table shows the quantity imports of petroleum products during 1922, as compared with previous years:

Petroleum imports into Egypt.

Products.	1913	1920	1921	1922
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*
Kerosene	134,704	132,707	136,971	148,214
Gasoline	1,885	5,054	13,856	12,086
Fuel oil	8,302	133,243	84,807	97,670
Lubricating oils and greases	.....	8,038	6,424	8,410
Vaseline	.....	17	37	45
Paraffin	123	220	210	161
Other liquid petroleum products	.....	1	99	1

The quantity of kerosene supplied by the United States increased from 755 metric tons in 1913 to 15,641 tons in 1920 and 46,042 tons in 1921, then dropped 50 per cent in 1922 to 23,390 tons.

Kerosene, gasoline, and fuel oil are imported into Egypt in bulk, and the kerosene and gasoline is distributed from Alexandria either in tank cars or by the carload in cans of 4 imperial gallons each. To interior points where it is not possible to ship petroleum products in tank cars, distribution is also made in steel drums of 40 imperial gallons capacity. The principal companies, in addition to being represented in the larger cities, have many subagencies and private firms handling their products exclusively as distributors and retailers in numerous smaller towns in Egypt and the Sudan.

AMERICAN OIL EXPORTS DURING MARCH AND APRIL.

Exports of petroleum products from the United States were somewhat larger during March than in February, but registered a general decline during April. Crude-oil exports continued to increase during April, however, shipments being more than double those for January and February. Exports of gasoline, kerosene, and lubricating oils remained fairly steady, while decreases are noted in gas and fuel oils, greases, and paraffin.

Petroleum shipments during the first four months of 1923 were in general considerably above the corresponding 1922 exports with the exception of illuminating and lubricating oils. Comparative figures are shown in the following table:

United States exports of petroleum products.

Products.	March, 1923.	April, 1923.	January-April, 1922.	January-April, 1923
	Gallons.	*Gallons.*	*Gallons.*	*Gallons.*
Crude petroleum	42,156,739	62,117,637	126,640,327	163,071,291
Gasoline, naphtha, and other light products	68,735,941	65,705,038	199,092,592	260,164,732
Illuminating oil	66,942,855	62,976,919	314,809,549	285,348,572
Lubricating oil	29,895,955	29,035,401	119,788,376	113,054,302
Gas and fuel oil [1]	96,075,416	86,709,722	205,424,155	359,428,117
Residuum and other products not specified	91,672	72,890	1,733,918	527,562
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
Lubricating greases	6,305,790	5,809,621	15,267,544	22,473,573
Paraffin wax:				
Unrefined	8,780,690	8,865,236	26,974,586	31,578,333
Refined	26,303,938	20,731,616	50,002,353	84,577,514
Total paraffin	35,084,628	29,596,852	76,976,939	116,155,847

[1] Does not include fuel or bunker oil laden on vessels engaged in foreign trade, which was as follows: March, 1923, 3,140,217 barrels; April, 1923, 3,173,168 barrels; four months ending April, 1922, 2,713,156 barrels; four months ending April, 1923, 11,618,300 barrels.

PETROLEUM TRAFFIC THROUGH THE SUEZ CANAL.

Consul Coert du Bois, Port Said, Egypt, May 3.

The place of the oil tanker in Suez Canal traffic is a post-war development. In 1913 only 42 tankers were operating through the canal, forming 2.4 per cent of the total net tonnage. In 1922, 127 tank steamers made 535 trips through the canal and furnished 11.5 per cent of the total net tonnage. During the month of January, 1923, the proportion of tanker tonnage to the total traffic reached 14 per cent.

The north and west bound current of mineral oil products from points of production east of Suez to markets and refineries in Europe makes up the bulk of the traffic. Thirty-one loaded tankers, aggregating 153,000 net tons, passed southward through the canal, however, carrying cargoes to fueling stations in India or batching oil to Calcutta.

Nationalities of Tankers.

The following table shows ownership of the tanker fleet now operating through the canal:

	1913.	1922.
British	35	99
American	--	12
Dutch	3	8
French	--	3
Japanese	1	3
Norwegian	1	2
German	1	--
Russian	1	--
Total	42	127

In January, 1923, the first Italian tanker passed through the canal.

British and American Tanker Trade.

The predominance of the British flag in Suez Canal tanker traffic is due largely to the activities of the British Tanker Co., the carrying branch of the Anglo-Persian Oil Co. The canal transits made by the 37 vessels of this company in 1922 totaled 203, or 38 per cent of the tanker transits and 42 per cent of the tanker tonnage.

During the past year 20 tankers under the American flag made the transit of the Suez Canal and one called at Port Said, discharged cargo, and returned to the United States without proceeding through the canal. During the first six months of 1922 six American tankers, westbound for the United States, after discharging bulk oil cargoes in Indian and Dutch East Indian ports, loaded mineral-oil products or crude at Balik Papan or Abadan for United Kingdom ports, crossing the Atlantic in ballast from England.

Mexican Petroleum Notes.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, May 12.

Mexican production of petroleum during April averaged about 100,000 barrels per day, according to a report by the Mexican Department of Industry, Commerce, and Labor. The report states, however, that the wells now coming in are as a rule of much smaller production than formerly. There is said to have been a large increase recently in the number of requests for drilling permits, most of these requests covering territory already proved on the Gulf coast.

Official figures of the Mexican Government give production in February as 11,289,669 barrels, with a total exportation of 9,714,993 barrels. Of the amount exported, 80 per cent was shipped to the United States. Increasing development activity is reported from a region of Vera Cruz known as El Maguey, on the Hacienda of El Calvario. The Corona Oil Co. is already drilling its first well in this field and the Mexican Eagle and two American companies are said to be preparing to drill in the same district. The Corona is installing a pipe line to carry oil from Pecero and is said to be projecting the construction of a branch railroad from Panuco to the Hacienda of El Calvario for a possible later continuation to the port of Tuxpam.

Additional information regarding petroleum appears in this issue under the following sections:

Cable review, Far East: Strike in Burma oil fields.
Latin America: Petroleum companies extending their operations in Venezuela.
Tariffs and trade regulations:
Canada—change proposed in import duty on crude petroleum.
Palestine—import duty on petrol increased.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

LEATHER TRADE OF THE TIENTSIN DISTRICT OF CHINA.

Consul J. C. Huston, Tientsin, April 13.

Tientsin is the center of the hide industry of northern China; there are three Chinese-owned tanneries and one Japanese owned in the city, with an output ranging between 40 and 100 hides per day. The largest cattle market in the district is at Tsinan, Shantung, where daily sales range from 300 to 1,000 head. The cattle are for the most part large framed, the steer weight running from 7 to 11½ hundredweight. The hides are comparatively thin, however, weighing from 20 to 30 pounds, and are very good for shoe leather. The buffalo hides are very coarse and inferior and are not used to any extent by the tanners in this locality. The cowhides are purchased directly from the native dealers, the price at the present time being $28.86 per picul of 133⅓ pounds. There is a large slaughterhouse, Japanese owned, in Tientsin which imports its cattle from Shantung.

The chemicals used are for the most part imported from the United States, and increased importation of these tanning materials has led to an increase in the number of tanneries in China. There is little machinery used by the small dealers at the present time, and the machines in use can be manufactured locally. Aside from the lack of machinery the latest and most up-to-date methods are used.

The hard river water at Tientsin gives unsatisfactory results in tanning, especially for the more delicate skins. The skins tanned are chiefly cow, goat, and lamb. The great tanning centers are Kalgan for goatskins, Kiaocheng for lambskins, and Tientsin, where the leather tanned is usually cowhides and used mostly for shoes. The river water after being settled is used in the chrome process with satisfactory results. The chrome leather is now being sold on the local market for 90 cents per pound, but the price is gradually declining because of the oversupply.

Foreign Trade in Leather.

The following table gives the amounts and values of the imports and exports of leather from the Tientsin district for 1920 and 1921 (values were converted from Haikwan taels at a rate of $1.23 to the tael in 1920 and $0.76 in 1921):

Tientsin's imports and exports of leather.

Classes of leather.	1920		1921	
	Pounds.	Value.	Pounds.	Value.
IMPORTS.				
Calf, kid, and colored	28,534	$156,749	16,133	$16,952
Cow:				
American and European	107,733	77,023	31,467	32,729
Hongkong	1,023,467	519,281	482,000	168,060
Japanese	6,933	4,797	40,133	14,399
Enameled, japanned, and patent	3,200	4,942	4,800	4,997
Harness	198,533	141,840	159,067	56,070
Sole	348,267	176,702	432,400	166,311
Other	29,200	23,160	133	51
EXPORTS.				
Upper leather:				
Cow	15,600	8,922	15,867	5,607
Sheep	16,533	10,945	45,067	19,157
Strips			667	794
Sole leather			13,067	4,618
White	49,733	32,575	2,133	857

The Chinese are rapidly taking up the use of foreign-style leather shoes, and those who have not are gradually beginning to use chrome leather soles with native cloth uppers. One leather sole will outlast three cloth tops. Native shoes with crome soles sell for $1.60, while locally made foreign-style shoes sell for $5 per pair.

Argentine Hide Market During First Quarter, 1923.

Consul W. Henry Robertson, Buenos Aires, April 9.

The range of prices for Argentine frigorifico hides during the first quarter of this year were as follows (prices are stated in Argentine gold per 100 kilos; the exchange value of the Argentine peso during the first quarter of the year was about 84 cents American currency): January, $55 to $58.50; February, $55.25 to $58; March, $57 to $58.62½. Prices of frigorifico hides in the United States during the period varied between 22⅞ and 23¾ cents per pound c. i. f. New York.

The total number of packing-house hides sold during January was 161,500; February, 261,800; and March, 240,100. The killing of cattle at the packing houses in the River Plate section, including those killed in the Montevideo frigorificos, amounted to 269,457 cattle in January, 275,197 in February, and 342,577 in March.

Live Stock Slaughter in Argentina During 1922.

Trade Commissioner George S. Brady, Buenos Aires, April 15.

The live stock slaughtered in Argentine packing houses during 1922, according to official statistics, included 2,199,000 cattle, 4,770,000 sheep, and 287,000 hogs, as compared with 1,625,000 cattle, 3,768,000 sheep, and 280,000 hogs in 1921, and 1,482,000 cattle, 2,870,000 sheep, and 321,000 hogs in 1920.

The slaughter at the Liniers (Buenos Aires) abattoir during 1922 comprised 877,981 cattle, 869,524 sheep, and 223,324 hogs. The estimated slaughter during 1922 in other cities and towns of the interior based on official percentages is as follows: Cattle, 1,900,000; sheep, 1,500,000; and hogs, 100,000.

Additional information regarding hides and leather appears in this issue under the following section:

Cable review, Far East: Conditions in the Indian hide market.

COAL

THE LOWER SILESIAN COKE AND BY-PRODUCTS INDUSTRY.

Assistant Trade Commissioner W. T. Daugherty, Berlin, Germany, April 30.

The present situation in the Lower Silesian coke industry is satisfactory. Coking coal is available in sufficient quantity and coke production has averaged 80,000 tons during the past few months. The sale of coke from this district promises to be considerable in the future. Iron foundries have a brisk demand for Lower Silesian coke, as it is of good quality for both heating purposes and the production of generator gas. Deliveries to Upper Silesian foundries are brisk; the reason for this is seen in the fact that Upper Silesian coal returns less coke than the better grade Lower Silesian coking coal, and Upper Silesian mines apportion only a relatively small amount of coal for coking purposes. Since the securing of coke in Upper Silesia (not so much the quantity but the quality) is attended with difficulties, sales to this quarter are expected to increase rather than decrease, particularly as the situation of coking plants in Upper Silesia is so uncertain.

Demand for By-Products Increasing.

Increasing demand is being made for by-products of the Lower Silesian coke industry. Although the production of benzol, which is used largely in the operation of motors, has increased, supply can scarcely cover demand. Tar and pitch production is likewise considerable.

Production of black coal briquets has also been satisfactory in the last few months, about 10,000 tons being the monthly average, against about 12,000 tons shortly before the war. The extension of briquet plants in this district will make it possible to again attain the pre-war production figure. Only high building costs have postponed extension thus far.

Plans are being made to build up coking oven output made during the coming summer, in the hope of being able to supply larger quantities of products next fall and winter.

British Coal Prices Slightly Weaker.

Trade Commissioner Alexander V. Dye, London, May 7.

Contracts for British coal are now being placed for the second half of the year. Prices on these contracts are lower than current quotations, but are higher generally than during the first six months of the year. The present weakening seems to be due to the fact that considerable coal was in the hands of speculators who purchased it at low prices and who are now selling in some cases under prices asked by collieries.

The result of the German and French notes on reparations has encouraged the belief among coal exporters that the demand both from Germany and from France for British coal, particularly for coking purposes, will strengthen rather than diminish later in the year. On the other hand, the demand for coal from Italy is very weak, owing principally to American competition. The French railways have come into the market for 20,000 tons of best coking coal for June and July. In South Wales coal prices are again slightly weaker, best Admiralty Welsh being quoted at 40 to 41 shillings. At Newcastle it is reported that Durham coking coals have been sold for delivery during the last six months at 35 shillings. On the other hand, D. C. B. steams are slightly stronger; they are now quoted at 33s. 6d. for July–September and will be 34s. 6d. later in the month.

The congestion at South Wales ports is improving, but arrangements for the installation of a third shift of dockers and trimmers have been practically concluded. The ascertainment of profits in the South Wales district for January and February, which controlled wages in May and June, shows that wages will

trict, and that the owners will have to contribute about £70,000 of their standard profits to maintain the minimum. However, on the basis of profits for March and April wages are expected to show an increase for July and August.

It is reported that a South American railway is now in the market for 150,000 tons of coal. Return freight rates from the River Plate are considerably weaker, while outbound freights are only slightly firmer. The quotation in the early part of May from Cardiff to Rio de Janeiro was 14s. and to Argentina 13s. 9d. Freight rates to the Continent remained generally unchanged.

Sales of Alberta Coal Promoted in Canada.

Consul G. R. Taggart, London, Ontario.

Alberta has 70 per cent of Canada's known coal resources, including a wide range of domestic coal varying from near bituminous to brown lignite, according to a pamplet published by the provincial government. The fuel engineer of Alberta is at present conducting a campaign in Ontario for the purpose of educating the people of the latter Province in the merits and use of Alberta subbituminous coal for domestic purposes. By means of illustrated lectures and pamphlets, Ontario users are being shown how to get the most heat through proper firing in their furnaces.

Before Alberta coal can compete with coal from the United States, however, the problem of transporting it 2,200 miles must be solved. At present prices and freight rates the cost of Alberta coal f. o. b. cars Toronto would be between $17.40 and $18.70 per ton of 2,000 pounds. Efforts are being made by the Alberta provincial government to obtain special rates over the Canadian National (Government) Railway on Alberta coal. If such rates are granted it is estimated that the cost of Alberta fuel delivered to the consumer in Ontario would be $14 per ton. As compared with these prices, Pennsylvania anthracite can be delivered to the Ontario consumer at $15.10 per ton, shaker-screened Kentucky or West Virginia coal at $10.86, and American smokeless soft coal, such as Pocahontas, at $13.59.

Advantages to be gained by the Canadian people generally through the use of coal mined in Canada as against that imported from the United States are given as follows: The developing of Canadian resources, the keeping of Canadian money in circulation in Canada, the giving of employment to Canadian workmen (thus making room for a needed increased population), and the fostering of trade between eastern and western Canada.

Proposed Revision of Coal Tax in Czechoslovakia.

Trade Commissioner H. L. Groves, Prague, April 7.

In an effort to lower the excessive coal prices the Government of Czechoslovakia is proposing to obtain a parliamentary enactment enabling the Government to revise and reduce coal taxes. The present coal tax, which became effective November 1, 1922, amounts to 30 per cent of a fixed basic price established by the Government and varies according to the location of the mines, the quality of coal produced, and the size of producing companies. This tax on the basic Government price works out to approximately 7½ per cent of the actual pit-mouth prices for coal.

While a reduction in the coal tax seems imperative, the present excessive prices for Czechoslovakian coal can not be brought in line with general commodity prices without a radical and general reduction of wages in the coal-mining industry of the country. Coal miners are now getting between 50 and 60 crowns per day, while in comparative lines of industry the daily wage at present is nearer 30 crowns.

Additional information regarding coal appears in this issue under the following section:

Cable review, western Europe:
British coal industry maintains high production figure.
Czechoslovakia's coal production.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

MARKET FOR PAINTS AND VARNISHES IN YUCATAN.

Consul O. Gaylord Marsh, Progreso, Mexico, April 5.

The paints and varnishes used in Yucatan are almost exclusively of American origin. There are no local paint manufacturers and practically no European importations of these articles have been received since 1914. The American products are well adapted to the climate, the only complaint being against paints made with fish oil, which prevents drying.

Oil paints are used for interior and exterior finishes, both in the better stone and wood houses. Interior walls usually show stenciled designs. Water paints have a comparatively large field, owing to their cheapness, ease of application, and adaptability to stone interior and exterior walls. Paints of all colors are applied, but white, green, red, and brown are in greatest demand. The use of prepared paints is common and good stocks are available. Painters, however, prefer to mix their own, using dry colors and oil. There is no demand for wall paper, it being entirely unsuited to climatic conditions.

The peninsula of Yucatan is practically without bridges, and therefore there is almost no market for bridge paints.

The district around Progreso has no manufacturing plants requiring varnishes, but a considerable quantity is sold for repair jobs and also for furniture, vehicles, and similar articles. Approximately 900 automobiles consume their yearly quota of paint.

American Weights and Measures Used—Packing and Sales Methods.

American weights and measures are used, except in the case of products sold in bulk, such as powder, oil, and other like commodities, which employ the metric system. Tins of a gallon and less are desirable for the general retail trade. There is no preference as to their shape. Containers are of the same type as those used in the United States, but the lettering should be in Span-

ish. No complaint has been made as to rusting of tins or other deterioration. Good packing, including waterproof lining, is desirable to withstand rough handling in the port of Progreso, and also to avoid injury to tins through accidental wetting with salt water in the unprotected harbor. There are no Government regulations as to the composition and marking of paints and varnishes.

Advertising has not been adopted as a means of selling paints in Yucatan, and it is doubtful if expenditures for that purpose would result profitably. The consumer of paint purchases from the hardware store a brand which either has been recommended or has proven by experience to be satisfactory.

Approximate Prices of Paints in Progreso.

Approximate prices of paints in Progreso at the present time, given in United States money, are: Enamel paints, $0.09 an ounce; prepared oil paints, $0.45 a pound; white zinc, $0.28 a pound; linseed oil, $1.75 a gallon; and cold-water paint, $0.22 a half-pound.

No statistics covering importations of paints and varnishes are available at the Progreso customhouse.

Soda Industry in Kenya Colony, Africa.

Consul William L. Jenkins, Nairobi, Colony of Kenya.

The Magadi Soda Co., at Lake Magadi, Kenya Colony, has a property covering 90 square miles, including the lake area of 34 square miles of carbonate of soda. There are very few natural deposits of soda in the world, and in this one the percentage of pure soda is as high as 96. The supply is practically inexhaustible, owing to the rapidity with which the soda re-forms. A prominent employee of the company states that only 4 square miles have been worked since operations began in 1912–13, and that by the time work was begun on the third square mile the first already had re-formed.

The Magadi company has a capital of over £2,000,000. It suffered greatly during the war, but present prospects are much brighter. It now has a capacity of 6,000 tons a month, which was expected to be increased to 12,000 in March or April of this year. The proposed increase is all the more striking since customs figures show that total exports of soda amounted to only 16 tons in 1913, 12,061 tons in 1919, and 12,829 tons in 1921. The values for these three years are given as £1,200, £269,258, and £107,166, respectively.

Shipments to the United States began in 1922 and tend to increase. The other principal markets are England, the Netherlands, Denmark, South America, and Japan.

Japan's 1923 Crop of Pyrethrum Flowers.

Consul E. R. Dickover, Kobe, May 1.

The 1923 crop of pyrethrum flowers in Japan, it is estimated, will amount to 2,260 tons of 2,000 pounds each. This production, according to the forecast, will be distributed among the principal producing regions, as follows: Western Japan (Hiroshima and Okayama Prefectures), 1,560 tons; Wakayama Prefecture, 200 tons; and Hokkaido (Yezo), 500 tons. The crop, it is stated, will not fall below this estimate unless weather conditions are unfavorable, and there is a possibility that the present calculation may be exceeded by as much as 20 per cent. If later in the year the prospects of high prices are favorable, the acreage planted to pyrethrum flowers may be extended. Moreover, the amount of fertilizer to be applied to the plants will be increased if the prospective returns warrant the enhanced cost.

Domestic consumption should require from 700 to 800 tons of pyrethrum flowers, leaving, according to the present forecast of the crop, an exportable surplus of 1,460 to 1,560 tons, or about 2,000 tons, if the possible 20 per cent rise in production materializes.

German Production of Synthetic Urea from Atmospheric Nitrogen.

Consul Don S. Haven, Leipzig, April 13.

During the war the Germans erected near Merseburg, in the Province of Saxony, the great chemical plant known as the Leuna Works. This establishment covers an area of approximately 1½ square miles and employs 18,500 men. It was designed for the purpose of extracting nitrogen from the air. This product was intended exclusively for agricultural purposes. Present plans are to devote a large portion of the plant to the manufacture of synthetic urea $CO(NH_2)_2$ by the Haber and Bosh processes. It is probable that the urea will be converted into the nitrate of urea containing 46.6 per cent of available nitrogen, which the Germans claim will be the principal source of nitrogen in the fertilizers of the future.

Nitrogen Consumption Doubled—Excess of Nitrogenous Fertilizers.

In the last few years the consumption of nitrogen is reported to have doubled. This is partly attributed to a program scheduled for the German farmers, with the view of intensifying the production of food. Before the war the total farm consumption of nitrogen, including that imported and calculated for the present area of Germany, was given as 180,000 metric tons, or about 6 kilos per hectare (5.3 pounds per acre). The figure for the season of 1922 rose to 12.2 kilos per hectare (10.86 pounds per acre), or a total of 365,000 metric tons.

At present it is said that 40 per cent of the German nitrogen fixation process is conducted within the area occupied by the Allied troops, and the normal supply from that source consequently is shut off to the rest of Germany. Notwithstanding this fact, the local market is reported as oversupplied with nitrogenous fertilizers. One reason is the farmer's inability to obtain credit, following a decline in the price of grain. Another is the manufacturer's inability to scale the prices down to within reach of the farmer, because of heavy increases in labor and transportation costs. The present cost of 220 pounds of hydrosulphide of ammonia, containing only 20 per cent of available nitrogen, is 150,000 marks, or approximately $7.50.

Ocher Deposit in Southern France.

A firm in France has informed Commercial Attaché Chester Lloyd Jones, Paris, of its desire to communicate with American firms or individuals interested in the working of ocher deposits or in the importation of ocher from France. Further information may be obtained upon application to the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., referring to file No. 9311.

Additional information regarding chemicals appears in this issue under the following section:

Tariffs and trade regulations: Palestine—import duty on perfumes increased.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

UNITED STATES EXPORTS OF BOOTS AND SHOES.

In the issue of COMMERCE REPORTS of June 4, 1923, page 646, under the caption "United States exports of boots and shoes increasing," the exports of leather boots and shoes from the United States (during April) were given as 5,210,785 pairs. This should be corrected to read: Exports of leather boots and shoes from the United States during the 10-months period ended April 30, 1923, totaled 5,210,785 pairs.

AUSTRIAN MARKET FOR AMERICAN SHOES.

Consul Carol H. Foster, Vienna, May 4.

American shoes enjoyed ready sales in Austria before the war, but imports have decreased during recent years owing to the premium on the dollar and the fluctuation of the Austrian crown. Conditions are now gradually becoming more normal, however, and it is expected that American shoes will again find an active demand in this Republic, as American products have an excellent reputation here.

There is considerable agitation among Austrian manufacturers for a law prohibiting the import of foreign shoes, but it is doubtful whether such legislation will be passed on account of the retaliatory measures which would undoubtedly be taken by foreign Governments.

Austria imported 411,500 kilos of boots and shoes during 1922. The countries participating in this trade were:

	Kilos.		Kilos.
Germany	347,300	Poland	1,000
Czechoslovakia	40,200	Italy	700
Switzerland	10,000	Yugoslavia	700
Hungary	3,600	United States	500
France	3,300	Netherlands	100
Great Britain	1,400	Other countries	2,700

The preferred varieties are Goodyear welt, McKay, and pegged boots and shoes and hand turned shoes for women. Austrian manufacturers dominate this market. German goods lead among foreign competitors, and offer keen competition to domestic articles. In addition to exploiting the Austrian demand, German firms maintain transit stocks in Vienna, thus selling to Poland and the Balkans when opportunity invites.

Possible Market for Some Types of American Shoes.

American shoes retailing for $2 to $4 and highest quality women's shoes could enter this market and supply a demand based on years of favorable experience. It would appear advantageous too for American exporters to lay down transit stocks in Vienna, since this city is the distributing point for the Eastern European States.

The market for the high grade women's shoes exists because Austrian makers are apparently unable to secure the best grades of materials. Moreover, they apparently are unable to make a shape that will hold. The wearers of Austrian-made shoes complain that they break down in the arch, so that there is a tendency for the toes to curl up and for the heels to slip back out of line. This is objectionable both in point of comfort and appearance.

BRITISH EXPORT TRADE IN LEATHER BOOTS AND SHOES.

The leather boot and shoe export trade of the United Kingdom during April, 1923, was 3.7 per cent greater in volume than during the corresponding month of 1922. Encouraging features are increases in exports to Australia, New Zealand, and British East Indies, as compared with April of the two preceding years. It is noted, however, that during the current year the April trade with the Netherlands was approximately half the volume of April, 1922; that with Belgium about one-third; and that with France and British South Africa also shows large decreases.

The following table gives the countries of destination and the number of dozen pairs of boots and shoes exported by the United Kingdom during April, 1921, 1922, and 1923:

British exports of leather boots and shoes.

Countries of destination.	April—		
	1921	1922	1923
	Dozen pairs.	*Dozen pairs.*	*Dozen pairs.*

UNITED STATES IMPORT TRADE IN LEATHER GLOVES.

During March, 1923, the United States imported 682,233 pairs of leather gloves, or approximately 200,000 pairs less than during the corresponding month of 1922. The trade with Italy in 1922 shows an increase,

The following table shows by class and principal countries of origin the number of pairs and value of the leather gloves imported into the United States during March, 1922 and 1923:

Imports of leather gloves into the United States.

Imports of gloves.	March, 1922.		March, 1923.	
	Pairs.	Value.	Pairs.	Value.
Women's and children's	881,496	$994,695	676,610	$698,375
Men's	6,936	9,512	5,623	5,905
Total	888,432	1,004,207	682,233	704,280
Imported from:				
France	389,220	678,593	367,258	404,426
Germany	416,784	212,347	241,360	226,583

Other countries	51,828	76,714	34,696	34,257

United States Imports of Boots, Shoes, and Slippers.

The United States imported 61,665 pairs of dutiable leather footwear, valued at $21,419, during March, 1923, as compared with 24,976 pairs of similar goods received during February. The boots, shoes, and slippers imported from foreign countries during March and not subject to duty totaled 93,508 pairs.

Imports of Boots and Shoes Into the Netherlands.

The Netherlands imported the following amounts of boots, shoes, and slippers made entirely or almost entirely of leather during January and February of this year, according to Holland's Import and Export Trader, Amsterdam, March, 1923:

Dutch imports of boots and shoes.

Countries of origin.	January.			February.		
	Pairs.	Kilos.	Value.	Pairs.	Kilos.	Value.
			Florins.			*Florins.*
Germany	191,336	181,989	603,924	263,449	220,650	776,330
Czechoslovakia	38,058	53,562	187,369	25,717	34,223	140,912
Great Britain	18,194	16,966	87,492	22,474	16,902	77,599
Switzerland	11,559	11,480	130,116	1,590	1,586	19,328
Other countries	12,670	10,872	79,629	4,864	5,017	27,277
Total	271,817	274,869	1,088,530	318,094	278,378	1,041,446

NOTE.—The average value of the florin is about 40 cents.

During 1922 the average monthly import of boots and shoes into the Netherlands amounted to 323,421 kilos in quantity and 1,186,313 florins in value. Average monthly imports from Germany during 1922 were 251,181 kilos and 821,096 florins; Czecholsovakia, 21,484 kilos and 89,178 florins; Great Britain, 32,826 kilos and 160,218 florins; and from Switzerland, 4,089 kilos and 52,570 florins. The number of pairs for that year is not known.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

CONSIGNMENT LAWS IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

There is no special act or code in the Netherlands governing consignments or conditional sales. The general principles of the laws of agency and sales embodied in the civil code and the provisions in the commercial code relating to commission agents are applied in these transactions. In order to retain title to goods consigned to a Dutch firm the foreign shipper should stipulate definitely in his arrangement with the importing firm that the goods, whether sold in the name of the consignor or the agent, are to be considered the property of the consignor until sale and delivery to a third party. He should also have an express agreement that all goods consigned by him should be kept separate and distinguishable from all other goods in the possession of the consignee. This last-mentioned precaution gives him the privilege of claiming his goods in the event of the agent's bankruptcy.

If an American shipper is doing business regularly with an agent in the Netherlands, it is advisable that their agreement provide that the agent open and maintain a separate account with a bank for transactions with or for the American shipper. The name in which the account is held should show that it is a separate account for a special purpose. If the goods are kept separate and identifiable, and a special bank account is maintained, there is but little danger of them falling subject to liens of third parties. If any such lien is attempted, Dutch laws provide ample machinery for clearing the goods of the consignor.

If a consignee sells goods to a third party, but goes bankrupt before the buyer has paid for the goods, the original consignor is entitled to receive payment therefor. Very often foreign shippers regulate sales on consignment by forwarding the documents for such goods to a Netherlands bank. This procedure practically eliminates all risk as the sum paid is placed immediately to the American shipper's account. It has its drawback, however, in that in some instances it hampers the sale of goods.

Third parties dealing with the agent of an undisclosed principal may consider such agent as acting for himself and hold him accountable as if he were the owner.

If an American shipper sells goods on consignment, to be paid for as sold, and a portion is sold without payment being made as agreed, the shipper has a claim against the purchaser for the unpaid purchase price. If the agent has duly performed his obligation and has stipulated that immediately upon sale and delivery the goods must be paid for, the consignor has no claim upon him but must look to the purchaser as in any other case where a sale is made through an agent. If, however, the American shipper can establish neglect or carelessness on the part of the agent he can hold the latter in a claim for damages.

Aside from the principles above outlined, in general the practices and commercial procedure of other great trading countries govern similar transactions in the Netherlands.

Ecuadorian Law on Bankruptcy and Insolvency.

Consul General Frederic W. Goding, Guayaquil.

Ecuadorian law recognizes three types of bankruptcy—fortuitous, culpable, and fraudulent. The two last named are punishable under the Penal Code. The law provides for voluntary bankruptcy, declared by the courts upon petition of the bankrupt, and for involuntary bankruptcy declared at the instance of some creditor or ex officio. Involuntary bankruptcy can be declared if a creditor proves an unsatisfied judicial order of payment and insufficient property to cover payment, or if three or more creditors present proof of the debtor's failure to meet his obligations to three or more distinct persons unless he has declared himself in state of suspension of payments.

On petitioning for a declaration of bankruptcy the creditors shall offer proof of the circumstances constituting the suspension of payments and the character of the failure. The judge shall hear the debtor and render a decision in the least possible time. Bankruptcy can also be declared in the case of a merchant who has died in a state of suspension of payments, if the request therefor is made within three months immediately following his death. In that event the property of the deceased shall be separated from that of his heirs.

Suspension of Payments May Be Granted.

A merchant who possesses sufficient funds to cover all of his debts but who foresees the impossibility of paying them on the respective dates they fall due may declare himself in a state of suspension of payments, and the local court shall so decree in view of his request. His petition must be accompanied by a statement of his assets and of the proposed extension of time, which shall not exceed three years.

A declaration of bankruptcy may be made ex officio only when the debtor absents or conceals himself, leaving no one in charge of his business. Transfers of all or part of a debtor's property made to the detriment of his creditors will justify a declaration of bankruptcy, and they will be declared null and void by the court upon satisfactory proof of the intent to defraud the creditors.

Claims of American Creditors.

Claims of American creditors are presented by their local representatives in the same manner and form as claims of other creditors. The local representative should be duly empowered to act as an individual, not as a firm or corporation, as prescribed by law. If a debtor pays his American creditor by bill of exchange drawn through a local bank which becomes bankrupt before the bill is paid, the obligation is not discharged.

Bankruptcy Proceedings—Recovery of Goods by Owner.

The local courts have charge of bankruptcy proceedings. The official who assumes charge of the liquidation is the "sindico," or receiver, who may be appointed by the court or by the creditors or by both.

Merchandise consigned on owner's account to one who becomes bankrupt may be recovered by the owner so long as it exists in the same form, in whole or in part, and can be identified. If such merchandise has been sold by the consignee and not paid for, the owner may claim the price from the third party. The right of stoppage in transitu is recognized in Ecuador.

The civil and commercial codes provide for certain classes of preferred claims in the event of bankruptcy. The laws and regulations relating to bankruptcy proceedings, in the Spanish text, may be found complete in the Codigo de Comercio de la Republica del Ecuador, 1906 edition, pages 203 to 244, inclusive.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

RAILWAYS.

SALES INFORMATION ON LATIN AMERICAN RAILWAYS.

The following article is the sixth in a series on individual railways in Latin America. All available printed sources have been used, and additional data have been furnished by Consul Egmont C. Von Tresckow, Arica, Chile, and Commercial Attaché W. L. Schurz, Rio de Janeiro, Brazil. A handbook containing this information in more detail for all railways in Latin America will be published later.

THE ARICA-LA PAZ RAILWAY.

F. E. Benjamin, jr., Transportation Division.

The three outlets from Bolivia to the Pacific coast pass through Peru and Chile. The Arica-La Paz Railway and the Antofagasta & Bolivia Railway have their southern termini on the coast of Peru at Arica and Antofagasta, respectively; the third—the Southern Railway of Peru—terminates at Mollendo. It is expected that the line from Atocha, Bolivia, to Villazon, Argentina, now under construction, will be completed in 1925. This link of about 200 miles will connect the railway system of Bolivia with that of Argentina, completing a transcontinental line from the Atlantic to the Pacific.

History and Administration of the Arica-La Paz Railway.

The Arica-La Paz Railway, a Bolivian State line, is

quent treaties and agreements between the Republics of Chile and Bolivia. Chile bound itself to build a railroad from the port of Arica to La Paz as compensation for Bolivia's renunciation of Antofagasta. Sir John Jackson & Co. (British) was given the contract for the construction of the road, which called for an expenditure of £1,645,000 ($7,994,700 at par) on the Chilean section and £1,105,000 ($5,370,300) on the Bolivian section, a total of £2,750,000 ($13,365,000). Accurate figures are not available, but it is believed that difficulties met with on the Bolivian section increased the cost to approximately £3,000,000 ($14,580,000). The line was opened to traffic in 1913. In 1914 the spur was built from Tarejra Station on the main line to the copper center of Corocoro. This spur is the property of the Bolivian Government and acts as a valuable feeder to the main line.

The provisions of the treaty stipulate that the

in its territory for 15 years from the date of opening. The line is administered from the offices of the Director General of the Chilean State Railways in Santiago, but the local administration centers in Arica. The Chilean State Railways has a branch office in New York; there is a commercial agent in Oruro and a local agent in La Paz.

Physical Characteristics.

The Arica-La Paz Railway is by far the shortest and most popular route to the Pacific ports; the comparative distances of the competitive roads are as follows: Antofagasta-La Paz, 1,155 kilometers; Mollendo-La Paz, 846 kilometers; and Arica-La Paz, 446 kilometers.

The trains all pass from El Alto de la Paz over the tracks of the Antofagasta & Bolivia lines; up to the eleventh kilometer the line parallels the Arica-Tacna Railway. Up to the fortieth mile from Arica the road was not difficult to construct. The next 12 miles, however, reach an altitude of 5,000 feet, and the next 25 an altitude of 8,610 feet, requiring an almost continuous rack line of 6 per cent grade. The two-plate Abt system is in use. The highest point along the line—13,896 feet above sea level—is near Jeneral Lagos, 112 miles from the Pacific and 155 miles from El Alto de la Paz.

Technical Features.

The length of the main line on the Chilean section is 128.21 miles. The minimum radius of curves is 328 feet. On the adhesive portions the maximum grade is 3 per cent and on the rack sections 6 per cent. Steel ties are used for 19.5 miles, and the rest are of wood. The weight of the rails is 55.7 pounds per yard. There are 7 bridges with a total clearance of 476 feet, and 5 tunnels with a total length of 2,398 feet. Bridging on the Chilean section represents 2 per cent of the total cost.

The main line of the Bolivian section is 145 miles long. The minimum radius of curves is 328 feet, and the maximum grade is 2.4 per cent. Wood ties are used throughout. The weight of the rails is 55.7 and 61.1 pounds to the yard. The 39 bridges have a total clearance of 2,706 feet; the cost of the bridge work on the Bolivian section was 4 per cent of the total.

Rolling Stock and Equipment.

In 1920 the rolling stock of the Arica-La Paz Railway consisted of 10 locomotives and 288 cars. Two of the locomotives were rack engines; the most efficient on the line were large American-made engines acquired two or three years prior to 1920. The Diario Oficial of Chile recently published new bids for new equipment on this road, including 3 locomotives for cog roads and 25 steel freight cars. Bids were opened in Arica on April 28. Extreme temperature on the Alto plains, as well as heavy grades, put the engines to severe tests, and frequent changes of locomotives are necessary. Freight cars are of steel, with galvanized-iron roofs.

Volume of Traffic.

The Arica-La Paz Railway in 1921 handled 61 per cent of the cargo into Bolivia, in comparison with 37 per cent handled by the Mollendo-La Paz line and 2 per cent by the Antofagasta-La Paz Railway. The monthly average of imports into Bolivia over the Arica-La Paz in 1922 was 1,750 metric tons, valued at $2,400.

Finances of the Arica-La Paz Railway.

The net receipts of the Arica-La Paz Railway are not made public, but it is known to be operating at a profit and is the only Chilean State line showing a favorable balance. There have been several rumors current during the past few years that the railroad has been leased, and it is admitted that such overtures have been made by a British company.

The Tarejra-Corocoro Railway.

The Tarejra-Corocoro Railway, which is only about 5 miles long, is in reality a spur of the Arica-La Paz Railway. It was built by the Bolivian Government in order to give the Corocoro copper-mining district direct access to the international line to Arica, and is operated by the Ministry of Public Works and Industry. Its construction was authorized in 1911, and the line was opened to traffic in 1914. The line is valued at 520,296 bolivianos ($202,395, at par). The gross income since the opening of the road to traffic has been as follows: 1914, 37,033 bolivianos; 1915, 84,634 bolivianos; 1916, 100,114 bolivianos; 1917, 128,257 bolivianos; 1918, 114,262 bolivianos. Later statistics are not available.

Additional information regarding railways appears in this issue under the following sections:

Construction news: Construction of branch line in Canada considered.
Latin America: Transportation rates in Argentina.
Eastern Europe: Markets for upper Silesian products.
Minerals and metals: Railway construction in Spain.

SHIPPING.

FIBER CONTAINERS FOR EXPORT SHIPMENTS.

J. F. Keeley, Assistant Chief, Transportation Division.

The growing use of solid fiber and corrugated fiber boxes for domestic shipment makes it pertinent to consider the possibility of their use for export shipments. At the present time these containers are accepted by intercoastal steamship lines and by lines calling at Cuban and Mexican ports. However, steamship lines generally have no uniform rules governing the acceptance of merchandise in fiber containers. A shipper desiring to send his goods overseas in these containers must first submit samples to the steamship traffic officials, who pass on each application, thus causing expense and delay.

The principal arguments for the use of fiber containers for oversea shipments are: Lower first cost; greater speed in packing; economy in weight and measurement, with lower shipping costs; economy in stowage space; and difficulty in concealing pilferage. Some of the objections are: Ease with which fiber containers are broken or torn when stowed with other cargo, with consequent exposure of contents to pilferage and damage; deterioration in damp holds or in unfavorable climates; inability to withstand the rough handling at many of the foreign ports.

Use of Fiber Containers for Parcel-Post Shipments.

At present fiber containers are used extensively and successfully for parcel-post shipments abroad. Such commodities as men's hats, shoes, and furnishings, dry goods, and soaps move to foreign countries in large quantities packed in fiber containers.

Specifications.

In the opinion of the fiber-board box manufacturers the specifications laid down by the railroad classification committee for freight shipments in the United States are adequate for export shipments of the same commodities. These specifications may be found in rate 41 of the Consolidated Classification, which is available at all railway stations in this country. It is recommended, however, that at least two flat straps be used to give added strength and to prevent pilferage from fiber containers intended for export shipment.

Improved methods of handling and stowage will make the wider use of these packages possible. When

fiber containers were first used for domestic shipment there was objection because of their liability to damage when loaded in cars with heavier freight. Improved methods of loading and stowing were developed, with the result that fiber containers are now widely used. The same objection is being raised by steamship companies; but improvements in steamship loading and stowing should make the use of such containers possible for certain commodities within reasonable weight limits.

Improvements in Construction.

It is inadvisable to adopt fiber containers without first consulting a reputable manufacturer. Usually a container suited to a particular commodity and designed to carry a certain number of units is subjected to laboratory tests, in order to determine the most suitable type of box. A corrugated fiber box, said to be waterproof, has recently been offered to the shipping public. It is claimed to be ideal for shipping liquids in glass, goods which contain or absorb moisture, and all commodities to wet-weather districts. Tests seem to indicate that it is a great improvement over the ordinary fiber case and is adaptable for export packing.

Descriptions of Packing Devices Wanted.

The Transportation Division has been engaged for several months in making a study of the best methods of export packing with a view to the publication of a manual on the subject which it is hoped will include a description of all modern improvements in the preparation of goods for oversea shipments. In connection with this work manufacturers of pilfer-proof cases, sealing and strapping systems, and all antipilferage devices are invited to submit descriptions of their devices or plans, in order that these may be mentioned in the forthcoming manual.

It is hoped that no device of merit will be overlooked, and information as to the extent of the present use of these devices by exporters will be appreciated.

Port and Shipping Notes.

New German Shipping Mergers for South American Service.

For the purpose of lowering operating costs and establishing a more regular service to the west coast of South America, the Hamburg America Line, the Kosmos Line of Hamburg, the Roland Line of Bremen, and the shipping company of F. Laeisz (an affiliate of the preceding company) have recently merged their interests. It is proposed to establish two separate services to ports on the west coast of South America—a 10-day steamship service from Hamburg, via Bremen, Rotterdam, and Antwerp, through the Panama Canal, and a sailing service every six weeks from the same cities, via the Straits of Magellan. (Assistant Trade Commissioner E. M. Zwickel, Berlin, May 1.)

Purchase of Vessel by Latvian Interests.

A group of Latvian shippers has decided to purchase in England a freight steamer of 3,000 tons capacity. This will be the fourth vessel purchased abroad by Latvian owners within three months. (Trade Commissioner Carl J. Mayer, Riga, April 8.)

Reduction in Passenger Tax at Boulogne-sur-Mer.

An important reduction in the taxes charged for each passenger embarked or debarked at Boulogne-sur-Mer by vessels going to or coming from abroad is provided in a decree promulgated by the French Ministry of Commerce and Industry. This decree, which became effective May 1, reduces the taxes to 25 francs for first-class passengers, 10 francs for second-class passengers, and 5 francs for third-class passengers. (Vice Consul William W. Corcoran, Boulogne-sur-Mer, April 5.)

Additional information regarding shipping appears in this issue under the following sections:

Minerals and metals: Shipping facilities between Hull and Spain.
Far East: Vessels entering and clearing from India during 1921–22 and 1922–23.

COMMUNICATIONS.

Radio Letters from Latvia to the United States.

Consul F. W. B. Coleman, Riga, Latvia, April 30.

The Latvian Main Post and Telegraph Administration announces that radio letters to the United States may be filed at all Latvian telegraph offices. The letters will be mailed to Berlin, whence they will be transmitted by wireless to New York, and from there to the addressees by post.

In drafting radio letters the following rules should be observed:

The letters must contain text in an easily comprehended language (English, French, or German). Only one language may be employed in a single radio letter.

Radio letters may not be compiled either wholly or partly in code. Trade-marks and groups of figures or letters may not be employed in the text, nor abbreviations nor any form of private code.

Cable addresses are permissible only in communication with New York. Numbers are to be given in writing.

Before the address the letters "R. L." (reckoned as one word) must appear, together with the words "via transradio," for which no payment is exacted. No other remarks, such as "urgent," "prepaid answer," etc., are permissible.

The charges for radio letters are 35 centimes per word, plus 1 lat (equal to 1 French franc) ground fee per wire. Claims for nondelivery of wires, for mutilation, or for delay will not be considered, and the charges will not be refunded.

Franco-Rumanian Aerial Mail Tariffs.

The international postal airplane tariffs are applicable to the service of the Franco-Rumanian Aerial Navigation Co. (see COMMERCE REPORTS, March 19, p. 766, and May 21, p. 519), the charge for letters and post cards being 6 lei for each 20 grams or fraction thereof, with a surcharge of 6 lei. The tariff for packages varies in accordance with the destination and the weight. The Bucharest offices of this company are located at 41 Calea Victoriei. (Consul Ely E. Palmer, Bucharest, April 16.)

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

AUSTRIA-HUNGARY.

Consul Edwin C. Kemp, Budapest, April 27, 1923.

Ratification of Austro-Hungarian Commercial Agreement.

The Austro-Hungarian commercial agreement, signed at Budapest February 8, 1922, ratified by Austria July 7, 1922, and ratified by Hungary February 20, 1923, went into effect March 2, 1923. The agreement is based on the principle of reciprocity, and guarantees to both contracting parties all rights and privileges enjoyed by any other State within the jurisdiction of either country. Most-favored-nation treatment is accorded both parties regarding nationals, ships, goods, and products of the soil or industry. The principal object of the agreement is to decrease the difficulties of frontier traffic and to cooperate in the enforcement of customs regulations.

DENMARK-RUSSIA.

Assistant Trade Commissioner H. Sorensen, Copenhagen, May 1.

Conclusion of Temporary Commercial Agreement.

A temporary commercial agreement was signed at Moscow on April 23, 1923, between Denmark and Russia, to be ratified within eight weeks.

This treaty provides reciprocal most-favored-nation treatment in regard to commercial rights and privileges, duties and restrictions on foreign trade, transportation and shipping. Important exceptions are, however, provided for on both sides. Denmark can not, however, claim such special privileges as Russia might grant a country which has recognized it or might in the future recognize it "de jure," unless Denmark is willing to allow Russia corresponding concessions. This agreement does not entitle Denmark to claim such special preferences as the Russian Soviet Government grants to the states adjoining Russia and Asia, nor can the Russian Soviet Government claim such preferences as Denmark grants only to Norway, Sweden, or Iceland.

The present agreement may be terminated by either of the contracting parties upon six months' notice.

GERMANY-PORTUGAL.

Consul Orsen N. Nielsen, Berlin, May 2, 1923.

Conclusion of Preliminary Trade Agreement.

According to the local press, the preliminary trade agreement between Germany and Portugal was signed April 28, 1923, effective for six months. Before the expiration of that period it is expected that a commercial treaty will have been negotiated to replace the treaty which expired on December 6, 1922.

Under the agreement just signed, Portugal grants to German imports the minimum customs duties prescribed by the tariff law of March 27, 1923, and guarantees that German goods shall not be liable to any special customs charges. Regarding the payment of customs duties in gold, Germany is placed on equality with all other countries, with the exception of Spain and Brazil. The present Portuguese shipping tax on sea trade has been reduced for German vessels.

Germany guarantees that duty on Portuguese imports of tinned sardines and cork shall not exceed specified rates, and declares that it will place no difficulties in the way of invoicing goods entering her trade with Portugal in either Portuguese or German currency. Germany further undertakes to import monthly from Portugal specified quantities of wines, pineapples, and fresh fruit.

This agreement resembles in the last provision treaties recently concluded by Portugal with Norway and Finland.

GERMANY-SPAIN.

Gaceta de Madrid, May 2.

Further Extension of Temporary Agreement.

By an exchange of notes on April 28 and 30, 1923, Spain and Germany have agreed to prolong until midnight of June 30, the modus vivendi established on January 15 last and extended from month to month since, according to an official notice dated May 1, 1923.

[Details of the modus vivendi appeared in Commerce Reports for January 29, 1923.]

RUMANIA-SPAIN.

Gaceta de Madrid, Madrid, May 6.

Conclusion of Temporary Commercial Agreement.

Spain and Rumania have concluded a modus videndi, by which Rumania accords imports from Spain most-favored-nation treatment and Spain grants Rumania the rates of the second column of its import tariff, according to an official notice dated May 4, 1923. This agreement is effective from May 1, and will continue in effect until three months after denunciation by either country.

GENERAL TARIFF CHANGES.

ARGENTINA.

Commercial Attaché Edward F. Feely, Buenos Aires, May 26.

Proposals for Tariff Revision.

The Executive has submitted a proposal to the Argentine Congress for an increase of 50 per cent on customs import valuations, and recommended also the exemption from import duties for lumber and certain other construction materials, as well as industrial machinery.

CANADA.

Customs Memorandum No. 32, Supplement A, Ottawa, May 24.

Further Budget Proposals for Modifications in Duties and Taxes Affecting Imports.

The Canadian budget proposals for changes in import duties and taxes, summarized in COMMERCE REPORTS for May 28 (p. 586), have been modified by later resolutions introduced in Parliament on May 23, and a few additional changes have been proposed, according to the official text received from the Commissioner of Customs and Excise, at Ottawa. The proposed changes in import duties are effective provisionally at once, subject to ratification by Parliament.

Changes in Import Duties on Colors, Crude Petroleum, Artificial Silk Fabrics, Rolled Iron or Steel Products, and Velvets.—In the following table are shown the proposed new rates, as compared with the

budget proposals of May 11 and the former rates on the specified commodities. The following proposed changes are to become effective June 1, 1923:

Tariff item.	Goods.	General rates.			Preferential rates.		
		Former	Proposed.		Former	Proposed.	
			May 11.	May 23.		May 11.	May 23.
242	Dry red lead, orange mineral and zinc white..... NOTE.—As modified May 11, the proposal included white oxide of antimony. (Omitted from proposal of May 23.)	*Ad val.* 5%	*Ad val.* 10%	*Ad val.* 5%	*Ad val.* Free.	*Ad val.* Free.	*Ad val.* Free.
267b	Crude petroleum, not in its natural state, 0.7900 specific gravity or heavier at 60° temperature when imported by oil refiners to be refined in their own factories...	[1]	*Per gal.* $\frac{5}{10}$ cent.	*Per gal.* $\frac{1}{2}$ cent.	[1]	*Per gal.* $\frac{5}{10}$ cent.	*Per gal.* $\frac{1}{10}$ cent.
583c	Artificial silk fabrics or artificial fiber silk fabrics produced from a form of cellulose obtained by chemical processes or of which artificial silk or artificial fiber silk is the component part of chief value, not specified.....	*Ad val.* 37½%	*Ad val.* 30%	*Ad val.* 35%	*Ad val.* 30%	*Ad val.* 17½%	*Ad val.* 17½%
134	NOTE.—The last provision in tariff No. 134, regarding the special duty on sugar, is modified to read as follows: "*Provided further*, That sugar imported under this item shall not be subject to special duty in excess of three-fourths of one cent per pound."						

[1] Not hitherto specifically classified; believed dutiable at 2½ cents per gallon (general) and 1½ cents (preferential).

Further proposals provide for an increase in the general duty under tariff No. 581, and for the addition of item 384b to the schedule:

		General rates.		Preferential rates.	
		Former.	Proposed.	Former.	Proposed.
384b	Rolled iron or steel hoop, band, scroll, or strip, in the coil, number ten gauge and thinner, when imported by manufacturers for use in their own factories in the manufacture of cold-rolled iron or steel.....	*Ad val.* 12½%	*Ad val.* Free.	*Ad val.* 7½%	*Ad val.* Free.
581	Velvets, velveteens, silk velvets, plush and silk fabrics.....	30%	35%	17½%	17½%

Changes in Drawback on Sugar and Artificial Silk Yarn.—Item 1031, as included in the budget as first proposed, granting a drawback of 99 per cent on sugar not above No. 16 Dutch standard in color, has been stricken out, and the following item, in effect June 1, 1923, substituted under that number:

Tariff item.	Goods.	When subject to drawback.	Portion of duty (not including special duty or dumping duty), payable as drawback.
1031	Artificial silk yarns, filaments, threads, or twists enumerated in tariff items 583a and 583b.[1]	When imported by manufacturers to be further manufactured in their own factories before the 1st day of July, 1924.	60 per cent.

[1] Artificial silk yarns or filaments or artificial fiber silk yarns or filaments produced from a form of cellulose obtained by chemical processes, not more advanced than singles, not colored; artificial silk tops and waste or artificial fiber silk tops and waste produced from a form of cellulose obtained by chemical processes. Artificial silk yarns, not otherwise specified, threads or twists or artificial fiber silk yarns, not otherwise specified, threads or twists produced from a form of cellulose obtained by chemi-

Changes in sales, luxury, and excise taxes.—Under the present proposals, the sales tax of 6 per cent is not to become effective until January 1, 1924, instead of August 1, 1923, as originally proposed. Job printed matter, produced and sold by printers or firms, whose sales of job printing do not exceed $10,000 per annum, is to be omitted from the list of articles exempted from the payment of the sales tax, and will, from January 1, 1924, be subject to the uniform tax of 6 per cent.

Manuscripts, raw furs, wool not further prepared than washed, and earthen drain tiles for agricultural purposes, are to be added to the list of articles exempted from the sales tax from June 1, 1923, while sirups and molasses of all kinds, the product of the sugar cane or beet, not specified, and all imitations thereof and substitutes therefor, will be exempted from the tax beginning January 1, 1924.

Paragraph 2 of section 3 of the amending resolution of May 11 is to be changed so that a wholesaler or jobber, in order to be granted an annual license, shall sell not less than 50 per cent (instead of 30 per cent, as previously proposed) of his total sales of goods to a licensed manufacturer or producer to be used in articles to be produced for sale.

The excise tax on carbonic acid gas is modified to read, "Carbonic acid gas, 1 cent per pound," effective June 1, 1923, instead of "Carbonic acid gas in cylinders, 1 cent per pound."

It is proposed that the repeal of the excise tax on confectionery and beverages be made effective from June 1, 1923.

CUBA.

Assistant Trade Commissioner C. A. Livengood, Habana, May 18.

Proposal to Establish Retaliatory Duties Against Foreign Discriminations.

A measure introduced in the lower house of the Cuban Congress provides for the introduction of a maximum schedule of import duties 30 per cent above the present general Cuban tariff, which is designed to secure a more favorable position with those countries which at present discriminate against Cuban products.

By the terms of this bill the tariff now in effect will constitute the general or minimum tariff, and will continue to be the rates of duty applicable to goods from countries (other than the United States) which do not discriminate against Cuban products. The maximum tariff provides for a 30 per cent increase over the general, and will apply to all countries maintaining a multiple tariff schedule, which do not give Cuba most-favored-nation treatment. A period of six months after promulgation of the law will be allowed for these countries to concede most favored-nation-treatment to Cuban products, but if this has not been done by the end of the period, the maximum tariff automatically goes into effect against importations from those countries.

The provisions of the treaty of reciprocity of 1903 will not be affected by the proposed law, and reductions to the United States will continue to be based on the general tariff.

SWITZERLAND.

Recueil des Lois Federales, Berne, May 2.

Extension of Government Authorization to Restrict Importation.

By a decree dated and effective April 26, 1923, the provisions of the decree of February 18, 1921, authorizing the Swiss Government to restrict the importation of goods have been extended until March 31, 1924.

Extension of Authorization to Federal Council to Modify Customs Duties.

By a decree dated and effective April 26, 1923, the authorization accorded by the decree of February 18, 1921, to the Federal Council to modify Swiss customs duties is extended until the revised law on the customs tariff comes into effect.

IMPORT AND EXPORT RESTRICTIONS.

GERMANY.

Cable from Commercial Attaché Charles E. Herring, Berlin, May 28.

Partial Abolition of Export Price Control, Export Taxes, and Licensing.

The export price control, export taxes, and licensing of a number of general classes of German goods have been abolished by the Reichswirtschaftsart (Federal Economic Council).

The measure is the result of long agitation on the part of the German exporters, owing to their loss of markets and export orders. Yielding to this pressure, the Federal Economic Council decreed that, effective May 27, 1923, the following articles are free from export control, taxes, and licensing:

All vegetable fiber, cordage, and textile materials, except flax; animal fats, waxes, and products; liquid resins, aromatic greases, solid tanning extracts, human hair, and trimming feathers; clothing and clothing materials, including pile fabrics, but excluding laces, embroideries, animal wool products, cotton and cotton hosiery and underwear; cordage, matting, fabric hose and belting, jute hangings, bookbinding materials, haberdashery, except felt hats; all hides, leather goods, excepting hairy hides; all rubber goods; brooms and brushes; animal, vegetable, and mineral molded and carved goods, excepting hardware; electrode carbons; some paper and printed goods; asbestos; mechanical packings; cast-iron kitchen utilities; coated metal sheets; wires and cables; household, building, office, and industrial hardware; mechanical and agricultural tools; metal furniture, excepting bedsteads, mattresses, and wardrobes; hair clippers; some nonferrous metal goods; arc lamps; insulating material; airplanes; new passenger cars, excepting hand and foot power; new vessels of all types; accordions and mouth organs; fish oils, bristles, horn, antler, bone, hoof, whalebone, shells and their products; tanning bark and logs; mineral gums; mineral oils and products.

Export prices must be quoted in high exchange currency, and at least 40 per cent of the resulting credit must be surrendered to the Reichsbank, which in turn reimburses the exporter in paper marks at the current rate.

GREECE.

Cable from C. E. Dickerson, jr., clerk to Trade Commissioner, Athens, May 28.

Import Prohibition on Wheat and Flour.

The importation of wheat and flour into Greece after May 17, 1923, has been prohibited by a ministerial decision published on May 16, 1923. Exception is made for wheat and flour in warehouses, in transit, or floated before May 17.

Former restrictions on the importation of wheat flour and cereals into Greece were removed on October 20, 1922.

GUATEMALA.

El Guatemalteco, Guatemala City, May 11.

Importation of Empty Used Bags Prohibited.

Importation of empty used bags into Guatemala after June 1, 1923, is prohibited by presidential decree. The purpose of this prohibition is to prevent the introduction in this way of a grain moth (gorgojo) which is found in many of the coffe-producing countries and is very harmful to the coffee bean.

LATVIA.

Trade Commissioner Carl J. Mayer, Riga, April 15, 1923.

Exportation of Aspen Wood Prohibited.

The Latvian cabinet has accepted the proposal of the Finance Ministry to prohibit the exportation of Latvian aspen wood to foreign countries, in order to protect the interests of the local match industry.

POLAND.

Removal of Import Prohibition on Sugar.

The Polish import prohibition on sugar has been removed, according to a cablegram from Assistant Trade Commissioner Elbert Baldwin at Warsaw, received at the Department of Commerce on May 26, 1923.

[The importation of sugar has been prohibited since February 14, 1922.]

Exportation of Crude Lumber Prohibited.

The exportation of crude lumber from Poland has been prohibited, according to a cablegram received at the Department of Commerce from Assistant Trade Commissioner Elbert Baldwin at Warsaw, on May 28, 1923.

[The restriction of timber exports from Poland has been under discussion for some time.]

TARIFF CHANGES ON SPECIFIC ARTICLES.

PALESTINE.

Board of Trade Journal, London, March 22.

Increased Import Duties on Confectionery, Liquors, Perfumes, Petrol, Tea, and Sugar.

The Customs Duty Amendment Ordinance No. 3 of 1923 establishes the following increased import duties, instead of the uniform 11 per cent formerly collected. The changes were effective February 15, 1923:

Articles.	New duty.
	Piasters per kilo.
Tea	3
Sugar	1
	Per gallon.
Petrol, benzine, or any other liquid which is used for driving mechanically propelled vehicles	4
	Per cent ad valorem.
Spirits and liquors	50
Champagne and sparkling wines	20
Other wines and beer	20
Perfumes and essence of perfume	25
Sweets and confectionery	20

The special import surtax of 1 per cent ad valorem will not be collected on the above articles.

URUGUAY.

Ambassador Hoffman Philip, Montevideo, April 13.

Proposal to Exempt New Industrial Enterprises from Duties and Taxes.

A bill will shortly be submitted to the Uruguayan Congress which provides that, for a period of 10 years from date of passage, every new factory and industrial establishment shall enjoy exemption from customs duties on the machinery, apparatus, accessories, pieces of replacement, and construction materials employed in the installation, renovation, and extension of the establishment, provided that such are not articles normally made in Uruguay.

Exemption from property and license tax in the case of industries new in the country, or those already established and enjoying similar benefit, is also proposed in this bill.

CUSTOMS REGULATIONS.

BRAZIL.

Commercial Attaché W. L. Schurz, Rio de Janeiro, May 1.

Protection on "To Order" Bills of Lading.

A circular of the Brazilian Minister of Finance, published in the Diario Oficial for April 21, 1923, instructs the inspector of customs not to consider the clause "notify," or equivalent expression, on the manifests of "to order" shipments as conferring on the persons thus notified any right to ownership of the merchandise in question. In such cases the respective persons are not authorized to clear or receive the goods by the signature of what is known as a "termo de responsabilidade," whereby they assume responsibility for the presentation of the necessary documents.

[The present ruling removes the uncertainty which had hitherto attached to shipments on "To order notify" bills of lading because, under Brazilian law, the person so named was regarded as part owner, and goods so shipped could not be reexported or otherwise disposed of without his consent.]

PHILIPPINE ISLANDS.

Legislative Bulletin No. 3096.

Conditions of Delivery of Merchandise Without Bill of Lading.

An act passed by the legislature and approved March 16, 1923, to take effect immediately, provides that no collector of customs, except in Manila, shall deliver imported merchandise to any person without the surrender of the bill of lading, except on the written order of the agent of the importing vessel, in which case neither the government nor collector of customs can be held responsible for damages arising from wrong delivery.

The collector may also require, when delivery is made against written order of the carrier, the subsequent production of an exact copy of the bill of lading, or accept bond for its subsequent production.

SALVADOR.

Consul Lynn W. Franklin, San Salvador, May 5.

Increased Fee for Certification of Consular Invoices.

The fee for the certification of consular invoices has been increased from 2 to 3 per cent of the invoice value, according to a decree published in the Diario Oficial of Salvador on May 2, 1923, and effective 40 days from date of publication.

INTERNAL REGULATIONS AFFECTING TRADE.

GERMANY.

Cable from Ambassador Herrick, Paris, May 28.

Unclaimed Merchandise in Occupied Germany to be Sold.

All merchandise now stored in freight cars and warehouses in the Rhineland will, beginning June 10, be turned over to the Franco-Belgium Restitution Service to be sold. Millions of dollars' worth of goods are now held in occupied Germany awaiting shipment to foreign countries, a good proportion of which is owned by American firms who have been unable to get delivery because of the trade deadlock of the last few months. Under the arrangements recently worked out by the United States Government with the Franco-Belgian Authorities, the American Embassies at Paris and Brussels are now in a position to assist the representatives of American concerns in obtaining export licenses, particularly for goods ordered before February 10.

The new order of the Inter-Allied Rhineland High Commission, as cabled by Ambassador Herrick, provides that beginning June 10, merchandise in freight cars in the railroad yards and in warehouses throughout the Rhineland will be turned over to the Franco-Belgian Restitution Service. Claims for such merchandise should be made previous to June 10, and must be submitted to the Franco-Belgian Restitution Service, Wiesbaden, Germany. After that date all unclaimed or unidentified merchandise will then be sold. The original owner, after establishing his right thereto, may claim reimbursement of the proceeds in French francs, if he applies within one year.

American firms should lose no time in either applying for export permits through their representatives in Europe, or in presenting claims for any merchandise they now hold in this territory which they can not move by June 10. COMMERCE REPORTS of May 28 (p. 588) carries full details of the steps necessary to secure export licenses for American-owned goods in occupied Germany.

FOREIGN PARCEL POST.

BOLIVIA.

Postal Bulletin, May 23.

Parcel-Post Packages for Bolivia Require Two Customs Declarations.

After June 1, 1923, two customs declarations will be required on parcel post packages for Bolivia. The declarations should be exact duplicates and separately attached to the parcel it describes, one copy to be detached by the United States dispatching exchange office (New York, New Orleans, or San Francisco) and sent by that office to the Bolivian office at La Paz, and the other copy to remain attached to the parcel until it reaches destination. (See Item "Bolivia" on page 168 of the Postal Guide for July, 1922.)

Additional information regarding tariffs and trade regulations appears in this issue under the following section:

Cable review, western Europe: Discussion of new Italian tariff delayed

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

MARKETS FOR UPPER SILESIAN PRODUCTS.

The following is a digest of an address made at Kattowitz, in Polish Upper Silesia, by a German mining engineer representing the Upper Silesian Mining and Smelting Association before the group of American delegates to the International Chamber of Commerce, who visited Poland during April:

Coal and Metal Resources—Western Markets.

After alluding to the large coal, iron, and zinc industries of Polish Silesia, the speaker stated that 65 per cent of all the coal produced leaves the district by rail. Of these shipments, about half goes to Germany, three-tenths to other parts of Poland, 15 per cent to Austria, and the rest to various other European countries. Of the total coke production, a little over half is used in the district, 23 per cent goes to other parts of Poland, 20 per cent to Germany, and a small remainder to other European countries. Nearly all of the pig iron and of the half-finished iron and steel products remains in the district, but the finished products of the steel works are in a large measure shipped elsewhere.

The question of sources of supply of iron ore is a serious one for the Polish Silesian territory. The local deposits formerly supplied all that was needed, but now only from 7 to 9 per cent. Before the war the principal sources were Sweden, western Germany, Spain, and Russia. Under present conditions, an increasing amount will have to be provided from other parts of Poland. The ore reserves in Poland are enormous, but the deposits are thin and the ores are of only medium grade, so that there is need of highly developed technical means of exploitation and improved means of transport.

Much of the Upper Silesian coke is not hard enough for blast-furnace use, and increasing quantities of coke have to be imported from Germany and Czechoslovakia. As these sources are becoming more and more difficult and expensive, technical methods will have to be improved in order to make satisfactory coke from local coal heretofore considered unfit for coking. There is thus need for large additional capital investment, both in iron-ore production and in coke manufacture.

The situation is more satisfactory as regards sources of supply for the zinc works; most of the ore is obtainable locally, although a better extraction is obtained by mixing in the retort charges of foreign ore. The products of the zinc and lead industry go mostly abroad, as Poland is able to consume only a very small percentage of the production.

Future Markets Toward the East—Obstacles.

Polish Silesia, therefore, in respect of coal of the by-products of coking, of finished iron and steel, of spelter and zinc sheets, and of sulphuric acid (a by-product of the zinc industry), must readjust markets. This is by no means easy. Upper Silesian industry can only gradually make itself free of western connections, which have become too expensive as sources of raw material and in which Upper Silesian products can hardly compete on an equal basis. It is more and more to the East that this region must look for sources of material and for the disposal of finished products. The East, however, has not sufficiently highly developed technical ability to produce the required raw material or sufficient capacity for consuming finished wares. This drawback will, it is believed, be gradually overcome. It can already be observed that the demand in the central and eastern parts of Poland is rapidly increasing. The time will undoubtedly come when Poland will be able to absorb everything and even more than the Upper Silesian district can produce.

There is, however, a second obstacle—namely, inadequacy of transportation. At the time when the greatest part of Poland was still in the Russian Empire the Russian Government built railroads only for strategic purposes, without regard to economic needs. Least of all had Russia an interest in creating adequate railroad connections for the benefit of an industrial district which was then still part of Germany. Consequently Upper Silesian industry now lives under transportation conditions which do not allow it to supply the Polish industrial centers promptly and adequately.

Remedial Enterprises Available to American Capital.

The Polish Government is fully aware of the necessity of changing these conditions. Commissions are busy at present planning new railroad lines. The Government, however, is doubtful whether under present financial conditions the State can build and operate the required lines. It believes that this should rather be left to private enterprise and is willing to offer liberal terms to foreign capital.

Upper Silesian industrials are fully aware that they are in need of many things which the United States can produce. The region has received from America locomotives and railway cars. It is a constant consumer of machine tools. American machine-tool factories have a stock in Berlin—a kind of permanent exposition. From this source Upper Silesia has occasionally obtained supplies. A similar institution might be suggested for the Polish side of the boundary, where the industries and railroad shops would be good purchasers.

DECLINE IN NUMBER OF INDUSTRIAL EMPLOYEES IN RUSSIA.

Abstracted from Izvestiya, Moscow, April 19, 1923, and other soviet publications.

A rapid shrinkage appears to have taken place since 1917 in the number of workers employed in Russian manufacturing and mining industries, whether those operated directly by the State (and on the State budget) or those operated through State-controlled consolidations (and supposed to be self-supporting), or those leased, according to comparison of data appearing in various soviet publications.

The consolidations include all manufacturing and mining industries that have been incorporated into groups designated as "trusts" and "combines," and exclude all that are directly operated by the State or leased, together with the small private workshops and home labor. The difference between the two types of consolidations lies in the character of enterprises forming their respective constituent units. A "trust" represents a combination of homogeneous enterprises, whereas a "combine" covers an aggregation of plants in allied and interdependent lines of production—such, for instance, as coal and ore mining, iron works, foundry and machine plants. Many of the trusts and combines are further consolidated into syndicates.

Industrial Employees Decrease Under Nationalization.

The total number of workmen employed on October 1, 1922, in all manufacturing and mining enterprises (excluding small private shops and home labor) was stated to be 1,181,500, distributed as follows (Economic Life, Moscow, December 30, 1922):

	Number of workers.
Petroleum and coal mining	137,388
Nontrustified metallurgical and chemical works under direct State control	92,520
Trusts and combines	832,327
Nationalized plants, operated by provincial soviets	53,384
Leased enterprises	65,858
Total	1,181,477

On January 1, 1923, the total number of such industrial workers for all Russia amounted to 1,146,000. (Izvestiya, April 19.)

The foregoing data regarding the total number of workmen in Russian industries may be compared with previous official statements of the soviet authorities on the same subject for 1917 (prior to "nationalization") and for 1921, as follows (Statistical Annuals of Central Statistical Bureau, 1913–1917, 1921; reproduced in Report No. 11 of the International Labor Office under the title "Organization of industry and labor conditions in Soviet Russia"):

Number employed in Russian industries, 1917 and 1921.

Industry.	1917	1921
Fuel (wood, coal, oil, peat)	585,000	568,000
Minerals (ores, precious metals, salt, etc.)	118,000	62,000
Metals (including machinery and manufactured products)	1,073,000	471,000
Silicates (cement, brick, glass, china)	101,000	31,000
Woodworking	88,000	116,000
Paper	81,000	25,000
Printing		57,000
Textiles (including clothing)	724,000	390,000
Animal products (furs, hides, and skins, hair, bristles, soap)	70,000	125,000
Food, beverages, tobacco	338,000	223,000
Chemical products	130,000	103,000
Total	3,308,000	2,171,000

It thus appears that, subject to a possible margin of incomparability in the figures, the number employed in 1922 was a little more than half as great as in 1921 and one-third as great as in 1917.

Labor Distribution in the Consolidated Industries.

According to the data compiled by the statistical division of the Soviet Council of National Economy, as of January 15, 1923, there were 458 "trusts" and 28 "combines." These nationalized industrial "trusts" and "combines" employed 825,000 workers of all grades.

The author of the Izvestiya article states that 62 of these major combinations employ 74 per cent of all labor in nationalized industries, while the remaining 422 employ only 164,384 workers, all told; a good many of such trusts have only 100 or 200 workers. These major consolidations are distributed by size and branch of industry as follows:

Major Russian consolidated industries and number employed, as of January 15, 1923.

Industry.	Over 10,000 workmen.		5,000 to 10,000 workmen.		3,000 to 5,000 workmen.	
	Number of combinations.	Employees.	Number of combinations.	Employees.	Number of combinations.	Employees.

ESTHONIAN FOREIGN TRADE, 1922.

Based on reports of F. W. B. Coleman, American Minister at Riga, Latvia; and on the commercial press.

Trade returns of Esthonia for 1922 indicate an improved ratio of exports to imports, as compared with 1921. The total of imports was 344,000 long tons (151,000 in 1921), valued at 5,589,000,000 Esthonian marks ($16,438,000, at the average exchange rate for the year of approximately 340 marks to the dollar). Imports for 1921 were valued at 4,482,000,000 marks ($13,185,000). Exports totaled 300,400 long tons (117,600 in 1921), valued at 4,811,000,000 marks ($14,117,000). The value of exports for 1921 was 2,285,000,000 marks ($6,723,000).

The unfavorable balance of trade in 1922 thus was only 778,000,000 marks ($2,321,000), as compared with the unfavorable balance in 1921 of 2,197,000,000 marks ($6,462,000). There was comparatively little change in the rate of exchange of marks for dollars as against 1921.

Character of Imports and Exports.

The chief imports in 1922 were foodstuffs valued at approximately $4,808,000; cotton, wool, and textiles at $2,761,000; machinery, vehicles, etc., at $2,232,000; metals and metal goods at $1,982,000; and coal, oil, and greases at $1,738,000. The principal exports (latest available figures, designating weight only) included lumber and wood products, 139,990 tons; coal, oil, and greases, 21,866; textiles and clothing, 21,443; machinery and railway equipment, 10,658; and foodstuffs, 83,508. Imports of foodstuffs consisted chiefly of wheat flour, rye grain, and spirits; exports covered chiefly rye flour, oats and barley, potatoes and potato flour, and spirits. Exports of coal and railway equipment apparently included reshipments to Russia of goods imported from other countries, in addition to the transit trade reported as such.

Imports were principally from Germany, $8,997,000; England, $2,440,000; Danzig, $1,197,000; and Finland, $1,046,000. Imports from the United States were valued at $385,000. Exports were chiefly to Russia, $3,632,000 (including transit trade); England, $3,150,000; Germany, $1,791,000; Belgium, $1,020,000; and Finland, $958,000. Exports to the United States were comparatively negligible.

Transit Trade with Russia.

Esthonian trade with Russia, including transit trade, experienced considerable decrease in 1922, as compared with the year preceding, owing principally to the levy of higher import duties by the Soviet Government, to increased activity of the port of Petrograd, and to certain obstacles encountered by Esthonian merchants. Transit shipments to Russia amounted to 55,271 long tons, as compared with 189,900 in 1921. Transit goods received from Russia for 1922 reached 3,094 tons, as against 1,242 in 1921. The principal transit shipments to Russia were foodstuffs, paper and printed matter, and lumber and wood products.

Additional information regarding eastern Europe and Levant appears in this issue under the following section:

Transportation—communications: Radio letters from Latvia to United States.

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division

DUTCH FOREIGN TRADE IMPROVING.

Consul General George E. Anderson, Rotterdam, April 24.

The trade of the Netherlands during the first quarter of this year has been encouraging. There has been a fairly satisfactory gain in the volume and value of both imports and exports with advantage rather on the side of exports. There has also been a distinct advance in a steadying process in trade and industry and in recovery from war conditions. Although the country is not in a wholly satisfactory condition, definite and material progress has been made.

The total imports for the first quarter of 1923, including gold and silver, reached 4,333,316 metric tons, valued at $197,560,602, as compared with imports of 4,500,892 tons, valued at $182,731,286 in the first quarter of last year. The total exports for the first quarter of the current year were 1,961,113 metric tons, valued at $114,850,329, as compared with 1,474,564 metric tons, valued at $107,879,515, in the same period of last year. Perhaps the most notable feature of the trade has been the distinct advance in values of imports. This is due largely to the elimination of some of the cheaper commodities, imports of which were comparatively large in 1922, but it is also due to a general advance in the price of many staple commodities. However, the increased volume of exports in comparison to the increase in value indicates a falling off in the value of Dutch exports, which is a direct reflection of a drop in the market prices for the leading products of the Netherlands.

Trade Statistics, by Classes.

The quantity and value of the leading classes of goods imported into and exported from the Netherlands during the first quarter of 1923 and a comparison with the figures for the corresponding period of last year are shown in the following table:

Import and export trade of the Netherlands during the first quarter of 1922 and 1923.

Classes.	1922		1923	
	Metric tons.	Value.	Metric tons.	Value.
IMPORTS.

Dutch Trade With the United States.

The Dutch statistics show a slight gain in both the volume and value of the country's imports from the United States during the first three months of the year. There were decreased imports of coal, lumber and timber, hides and skins, and a few minor items, but largely increased imports of flour, oils, and textiles, compared with last year, while there were also increases in the volume of imports, but a decrease in value of chemical products and automobiles, and there was an increase in value but a decrease in volume of imports of grains and miscellaneous food products.

A considerable increase in exports of Dutch produce to the United States is noted for this year when compared with the same period of 1922. This increase has taken place in all classes except oils, the falling off in that line being due to the collapse of the export trade in linseed and other vegetable oils.

The trade of the Netherlands with the United States, as shown by the Dutch figures, for the first quarter of the current year compared with those of the same period of 1922 was as follows:

Trade of the Netherlands with the United States for first quarter of 1922 and 1923.

Classes.	1922		1923	
	Metric tons.	Value.	Metric tons.	Value.
IMPORTS.

New Regulations Concerning Unemployment Subsidies in Denmark.

Assistant Trade Commissioner H. Sorensen, Copenhagen, May 1.

On May 1, 1923, the new regulations pertaining to unemployment subsidies was effective in Denmark. These regulations provide that continued aid over and above the regular subsidies and supplementary assistance can not be granted for more than 90 days each year. It will be left to the different communes to choose the period in which the continued aid will be granted, but it must not exceed three months and is not to last less than 40 days.

Activity on Austrian Stock Exchange.

Consul Robert W. Heingartner, Vienna, April 23.

The Vienna stock exchange was again the scene of unusual activity during the week ended April 21; in fact the rush for Austrian stocks was greater than in any previous week in the history of that institution. There were approximately 1,200,000 transactions during the week with an estimated turnover of 20,000,000 shares, or more than 3,000,000 shares daily. The average quotation per share is estimated at 45,000 crowns. It seems that the elimination of depreciation has restored not only local but also foreign confidence in Austrian securities, and this is reflected in the growing foreign demand for Austrian stocks of all kinds.

Austrian bank shares played the leading rôle in the business done during the week. Landerbank shares were sold to France, Anglo-Bank shares to England, Escomptebank shares to Switzerland and Belgium, and Wiener Bankverein shares to the United States. Although Austrian bank shares have gained considerably during the past month they are still disproportionately cheap, as compared with their pre-war value, and this fact in conjunction with the growing confidence in Austria's future has made them one of the most popular stocks on the Vienna exchange. Bank stocks will probably continue to advance steadily.

Stock of the new Austrian National Bank, quoted at 1,400,000 crowns per share, was recently put on the Austrian stock exchange.

Danish Farm-Hand Wages.

Assistant Trade Commissioner H. Sorensen, Copenhagen, April 16.

The yearly farm-hand wage for the entire country of Denmark has been reduced during the past year by 23 per cent. Wages of foremen show a reduction of 22 per cent, and those of stall masters and maids have been reduced 8 and 10 per cent, respectively. The reduction is, therefore, largest among farm hands and boss hands (foremen) and somewhat less for stall masters and maids. A calculation shows that the wage, compared with value of their keep, is proportionately larger for the past year than for the year 1920–21.

The following table shows the yearly wage scale for the various classes (the present exchange value of the Danish crown is about 19 cents):

Classes.	1920–21	1922–23
	Crowns.	*Crowns.*
Hands	864	662
Foremen	1,185	919
Stall masters	1,121	1,029
Maids	603	540

Swedish Foreign Trade During First Four Months of 1923 Unfavorable.

Based on cable from Consul W. A. Leonard, Stockholm, June 3.

The value of Swedish imports during March was 114,580,000 crowns and exports 61,618,000 crowns, thus leaving an unfavorable trade balance of 52,962,000 crowns. During the month of March imports to the United States were valued at 108,770,000 crowns and exports at 60,914,000 crowns. The chief commodities imported during April, with values, were as follows: Mineral raw materials, 16,530,000 crowns; textiles and clothing, 14,000,000 crowns; ships and machines, 10,530,000 crowns; cereals and food products, 10,090,000 crowns; textile raw materials, 6,630,000 crowns. The chief exports during the month were wood pulp and paper, 11,050,000 crowns; mineral raw materials, 6,380,000 crowns; raw metals, 4,200,000 crowns; animal food products, 3,670,000 crowns; and sawn lumber, 7,380,000 crowns.

The excess of imports over exports during the first four months was 162,000,000 crowns, as compared with 107,000,000 crowns for the corresponding period in 1922.

Additional information regarding western Europe appears in this issue under the following sections:

Automotive products:
American accessories appreciated by Danish car owners.
Detachable marine motors no longer salable in Denmark.
British motor cycles gaining preference over light cars.
Tariffs and trade regulations:
Unclaimed merchandise in occupied Germany to be sold.
Export pine control, export taxes, and licensing in Germany partially abolished.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

THE AGRICULTURAL INDUSTRY OF ARGENTINA.

Winfield W. Riefler, clerk to commercial attaché, Buenos Aires, May 1.

Although the live-stock and pastoral industries still form the most important single group in the economic life of Argentina, the development of its agricultural resources has been the outstanding factor of the last two decades. Just as sheep ranching and wool production were gradually driven out from the most accessible regions to be supplanted by cattle raising, under the pressure of higher land values the present movement has been more and more for the agricultural industries to supplant the pastoral industries in the attempt to intensify the cultivation and productive capacity of the choicest lands. In this manner there can be observed a gradual movement in which the areas of sheep raising and wool production gradually move farther and farther from the economic center of the country to make room for the live-stock industries, which in their turn have been making room for agriculture.

Adventages in Crop Production.

The Argentine grower of grain is favored by conditions of climate and soil, large scale workings, cheap labor, and abundance of horses, factors which operate to make his costs of production lower than those in the United States. On the other hand, there are many difficulties which do not operate to the same extent in the United States. Yield per acre is generally lower, and the locust pest often operates to diminish it further. Moreover, land values have risen so rapidly that they have reached the point where many observers claim they are not justified by the productive power of the land, the average value of rural land per hectare having quadrupled in the period from 1900 to 1920. However, in many cases these lands, in spite of their high valuation, were acquired by the present owners at prices now considered ridiculously low, before the present extensive railroads were constructed.

Difficulties in Marketing.

The greatest difficulties besetting the Argentine grower in the marketing of his product are undoubtedly the absence of adequate warehousing facilities and the extremely bad road conditions, making it difficult to get the grain to the railroads. There has been an agitation for many years (so far without result) in favor of the erection of grain warehouses, where the grower could store his product and receive for it warehouse receipts which would be negotiable at the banks. Under present conditions of storage on the land, the higher price realized by holding the grain instead of selling immediately, if realized at all, is often more than offset by loss and deterioration which has taken place in the meantime. Nevertheless, holding of grain for better prices is quite prevalent.

The country roads in Argentina have not been improved to any extent, so that a few days' rain makes them impassable for weeks and holds up the delivery of grain to the market correspondingly. In the southern winter of 1922 (June to September) rains were so constant that not only could the corn not be moved to market but a large portion of the crop was lost through moisture. Railroad transportation is also high, the rates having been increased in the latter part of 1922 to an average of 6.80 Argentine paper pesos ($0.356 at present exchange) per metric ton for 100 kilometers (about 62 miles).

Principal Crops and Prevailing Prices.

The principal grain exchange is located in Buenos Aires (Bolsa de Cereales). Here grain is traded, as in the United States. The principal crops are wheat, corn, linseed, and oats; linseed going in large quantities to the United States, and the other crops being sold principally to Europe. Competition between the large grain-exporting houses is extremely rigorous, and many were crowded out during the post-war crisis. Only five or six were doing any considerable exporting during 1922, and recent reports state that this number has been reduced to two during the present season.

Grain prices are, of course, determined by the world price and current rate of Argentine exchange. Shipping freights play an important part in the profit of a transaction, and the ship market is especially erratic, due to the practice on the part of shipowners of directing large amounts of tonnage to Buenos Aires when a dearth of shipping or large harvests are reported there. The remoteness of the River Plate market and the absence of other large shipping centers near by often bring about a situation where by the time the tonnage reaches the market the dearth has changed to an over supply and there is no other market to which the ships may be sent.

Extensive Development Anticipated in Future.

Despite these difficulties, which make grain production a more speculative undertaking in Argentina than in the United States, the economic experience of the country has been such during the post-war period that a more extensive development of these industries may be expected in the future. Crops have been large during the last three years and, although marketed at prices considerably under those of the war period, have, nevertheless, been disposed of profitably, whereas the falling off in demand and price for Argentine meat products has been such that former raisers of cattle are expected to turn to agricultural activities as a solution of their difficulties.

Bolivian Conditions in May.

Based on cable from Consul Dayle C. McDonough, La Paz, May 29.

Although the exceedingly prosperous state of the Bolivian mining industry, which has prevailed for a number of months, continues, general commercial conditions have not yet shown the prosperity which was anticipated as a corollary. This is accounted for by the

fact that the population which buys imported articles is exceedingly limited and comparatively a small share of the wealth extracted from Bolivia's mines is at all widely distributed over the country. Even in the mining industry a number of the smaller mines are not working at this time, which adds to the concentration of wealth and the limitation of imports.

A sign of easier money is the reduction of the discount rate from 10 to 8 per cent. Several failures have occurred in Cochabamba but none of them were large or of special significance. Exchange showed a slight recovery during the month, the average rates for May and April being 3.16 and 3.18 bolivianos to the dollar, respectively. The change has had a tendency to curtail imports.

During the course of the past month an American was granted a concession for 45,000 acres in southeastern Bolivia for colonization purposes.

Railroad Construction to Continue.

An arrangement has been effected between the Government and three banks for the application of 2,000,000 bolivianos to the construction fund of the Potosi-Sucre Railroad. This will be sufficient to continue active work on that line for the next six months. The loan is guaranteed by the alcohol, tobacco, and other taxes derived from the departments of Potosi and Chuquisaca. A Government commission is leaving for New York to confer with bankers there concerning this loan.

Exports, Imports, and Markets.

Tin exports for April were, in metric tons, as follows: 2,963 to Great Britain; 1,286 to the United States; 13 to France. There are practically no stocks on hand, all being shipped immediately in order that advantage may be taken of the present exchange and price situation.

Imports were fairly active during the month, notably in flour. Particularly important items from the United States were canned goods, zinc, lubricating oils, and wax. Explosives came in considerable quantities from both the United States and from Germany, and paper and hardware from Germany. Great Britain figured largely as a source of textiles and hardware. However, the market for imported goods is generally well stocked. The market for automobiles, although very small, is at present showing considerable activity.

Business Activity in Venezuela.

Based on cable from Consul T. W. Voetter, Caracas, May 26.

Business conditions in Caracas and in the district of which the capital is the commercial center were less encouraging in May than during the preceding month, when considerable activity was reported. The principal reasons for this setback seem to be the weakness in coffee prices and the resulting accumulation of stocks. Dollar exchange remained practically stationary during the month, and closed on May 26 at 5.23½. During April the dollar held firm at 5.23 bolivars. Discount rates continued unchanged during both months.

Coffee prices declined from 86 bolivars per bag of 46 kilos of best grade Caracas "descerezado" in March and 76 bolivars in April to from 68 to 70 bolivars in May. "Threshed" coffee fell from 72 bolivars per bag of 46 kilos in March to 68 bolivars in April and to 56 and 57 bolivars in May. Coffee stocks were unusually large for the time of year and were estimated to include 30,000 bags at Caracas, 50,000 bags at Puerto Cabello, and 110,000 bags at Maracaibo. A large part of these stocks was purchased speculatively, to be held for higher prices.

Stocks of cacao at La Guaira were estimated at 95,000 bags. Export shipments continued during the month, but principally on orders placed before May 1. Cacao prices were weak, with quotations during May at from 47 to 49 bolivars per bag of 50 kilos.

The commercial district tributary to Maracaibo, however, has not felt the slight and apparently temporary depression. Petroleum companies have extended their operations in the region and the result has been beneficial to commerce. Options on oil concessions have been fairly active.

New Dominican Republic Highway.

Consul C. B. Hosmer, Santo Domingo.

The movement to increase the exploitation of national resources in the Dominican Republic has received fresh impetus from the opening of the new 75-kilometer (47-mile) macadam highway connecting San Pedro de Macoris (capital of the Province of the same name) with Santo Domingo—capital of the Republic. Several previous attempts to construct this highway were unsuccessful on account of engineering difficulties and inadequate appropriations. The work on this final and successful effort has been carried on directly by the Dominican Government under the immediate charge of the Director General of Public Works.

San Pedro de Macoris is the principal sugar port of the country and a progressive city of considerable industrial and commercial importance. The industries include sugar mills, a tannery, a distillery, a soap factory, and a foundry. The volume of imports entering the country through San Pedro de Macoris is steadily increasing and visits of American commercial representatives are becoming more frequent. The principal products of the district are sugar, molasses, wax, timber, cattle, and cacao.

The highway is constructed of water-bound macadam 7 meters in width, of which 5 meters are metaling and 1 meter shouldering. The maximum grade is 6 per cent, and the maximum curvature is 30° to a 20-meter arc. All stream crossings are permanent bridges except in the case of Rio Higuama, where a provisional power ferry has been installed, capable of transporting all traffic, including touring cars and trucks. The value of the new highway is easily understood when it is realized that there are no railroads serving this important area and that, as a result of the lack of transportation facilities, the productivity of the district has never been thoroughly developed.

Additional information regarding Latin America appears in this issue under the following sections:

Transportation—railways: Sales information on Latin-American railways.
Tariffs and trade regulations:
Proposal to exempt new industrial enterprises in Uruguay from duties and taxes.
Cuban proposal to establish retaliatory duty against discriminations.
Brazilian decision assures security on "to order notify" bills of lading.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

IMPROVEMENT IN HAWAIIAN TRADE.

Hawaii during the last two years has gone through one of the most critical financial and industrial depressions it has experienced since becoming a Territory of the United States. Only conservative policies, which have always controlled business life in the islands, prevented widespread disaster. At the close of 1922, however, business conditions showed improvement and it looked as if the crisis had been successfully weathered. Better prices were being received for sugar and pineapples—the crops from which Hawaii derives its principal income—and the outlook for 1923 was much more hopeful than it had been for some time.

Trade Shows Improvement.

The trade of the islands during the year 1922 showed signs of a slow recovery, judging from the business done with the United States, which ordinarily makes up about 90 or 95 per cent of the total. The value of exports from the islands showed an increase, as compared with 1921, while imports declined. Trade as a whole shows a decline, but the increase in the value of exports is taken as indicative of better times. It is interesting to note that while Hawaii's 1922 exports to the United States were only about two-fifths of the value of the 1920 trade, they were, nevertheless, almost double the value of the exports during 1913. The decline from the 1920 figure is accounted for by the drop in the prices of sugar and pineapples, which make up the bulk of Hawaii's exports. The quantity of these two commodities exported during 1922 was about equal to the amount exported during 1920.

Imports Register Decline.

Imports from the United States during the year 1922 were about double those during 1913, but were nearly $11,000,000 less than during 1921 and $21,000,000 under 1920.

Goods imported from countries other than the United States during the year 1922 aggregated $7,496,963, as compared with $9,529,755 during 1921, while the exports to foreign countries totaled $1,257,268 during 1922 and $1,350,483 in 1921.

The principal items of import and export during 1922, as compared with 1921 and 1913, are given in the following table:

Foreign trade of Hawaii in 1913, 1921, and 1922.

Articles.	1913	1921	1922
Imports from United States	$29,753,357	$64,446,173	$53,585,740
Iron and steel and manufactures of	5,864,362	11,299,989	7,552,651
Oils, mineral	1,825,973	10,241,932	6,368,239
Breadstuffs	2,632,985	4,126,885	5,100,665
Wood, and manufactures of	1,864,649	3,523,622	3,742,098
Cotton manufactures	2,417,320	3,712,687	3,207,726
Automobiles, carriages, etc., and parts	1,376,714	2,982,764	2,748,590
Meat and dairy products	1,374,572	3,402,797	2,686,090
Tobacco and manufactures of	754,663	2,185,966	1,918,169
Paper and manufactures of	670,521	1,828,324	1,778,341

Exports to foreign countries		1,350,483	1,257,268

Banks Consolidate—Savings Decline.

Despite several bank failures in Hawaii during the year a new Chinese bank was opened with a capital of $200,000. There was a general tendency toward consolidation, due to the weakened condition of all banking institutions. The decline of commercial and savings deposits during the year amounted to $4,937,923 and was attributed chiefly to withdrawals for the payment of Federal and Territorial taxes.

Building Active—Farm Labor Scarce.

Notwithstanding a measure of depression throughout the islands construction was unusually active in 1922, many projects being commenced which promise to give employment to the building trades for some time to come. The scarcity of farm labor continued to be a disquieting factor, this class of laborers tending to leave the farms to take up other kinds of work.

India's Foreign Trade in March.

Trade returns of India for March, 1923, show that exports of Indian produce and manufactures surpassed the record figure of the preceding month and amounted to 312,000,000 rupes—the highest figure ever recorded in India's trade. Reexports totaled 14,400,000 rupees (corrected from COMMERCE REPORTS of May 7, page 342).

Measured by the statistics of merchandise, treasure, council bills, enfaced rupee paper, etc., the favorable balance of trade was 70,600,000 rupees, but from the point of merchandise trade alone it aggregated 141,000,000 rupees. The net credit trade balance for March, 1922, was 4,800,000 rupees.

Compared with March, 1922, the decrease of imports by 29,500,000 rupees is accounted for by India's diminished purchase of Australian wheat, iron and steel, dyes, machinery, and railway supplies. Sugar importation showed an improvement of 15,800 tons, valued at 6,300,000 rupees, and piece goods advanced by 51,000,000 yards, valued at 27,100,000 rupees.

The great increase in exports of Indian produce and manufactures is attributed to heavy shipments of raw cotton and food grains, but these were offset in a measure by smaller sales of oilseeds and jute. Of the 83,000 tons of cotton sold by India in March, 1923, 38,000 tons, or 46 per cent, went to Japan and 14,500 tons, or 17 per cent, to China. The United Kingdom and Belgium increased their demand, each taking 5,000 tons, while Germany and Italy each purchased over 6,000 tons.

Exports of manufactured goods also rose by 11,400,000 rupees, which is largely accounted for by increased shipments of gunny bags. Gunny-cloth exports showed an increase in value, although the quantity decreased. The United States again took most of the jute cloth exported, followed by Canada, the United Kingdom, and Australia.

France and the United States were the largest purchasers of raw jute, and the latter country continued to be the best market for lac and skins. Germany, in spite of its financial difficulties, is still buying a considerable quantity of hides.

Countries Sharing in Trade of India for the Fiscal Year.

The share of the United Kingdom in the imports of India rose from 56.6 per cent in the fiscal year ended March 31, 1922, to 60.2 per cent in 1922–23, while exports to the United Kingdom rose from 20 to 21.8 per cent. The share of the British colonies, however, fell from 10 per cent of the imports to 7 per cent, due chiefly to reduced imports of wheat from Australia.

Germany and Japan increased their shares of the import trade from 2.7 per cent in 1921–22 to 5.1 and 6 per cent, respectively, while the United States purchases declined from 8.1 to 5.6 per cent, and Java's dropped from 8.9 to 5.5 per cent in 1922–23. The shares of the United States and Germany in the export trade registered very little fluctuations, standing at 11 and 7 per cent, respectively, while Japan took 13 per cent, as against 16 per cent in 1921–22.

The tonnage of vessels entered and cleared from India in the year ended March 31, 1923, was 6,518,000 and 7,444,000, respectively, as compared with 6,966,000 and 6,553,000 tons in the preceding year.

Chosen a Potential Market for American Exports.

Chosen (Korea) since its annexation by Japan in 1910 has developed into a potential market for many foreign products. Its trade, both imports and exports, has grown by leaps and bounds.

It appears from a study of Chosen's foreign imports that the United States is not enjoying the same share of this trade that it does in the case of Japan proper. We have, for several years, held first place in the imports of Japan but in the case of Chosen, excluding imports from Japan, the United States holds second place, China being first. Many of Chosen's imports from Japan as well as from China, however, are of American origin, being transshipped through Kobe and Shanghai. Chosen is also less developed than Japan proper and, therefore, requires a greater percentage of oriental wares such as China is in a position to suppy. These two conditions account for the fact the Chosen's imports from China have increased sixfold since 1914 while its imports from the United States only doubled during the same period.

Chosen's imports from Great Britain during 1921 were half those from the United States, while Japan proper imported only one-third as much from Great Britain as it did from the United States. This would seem to indicate that our exporters are not giving the same direct attention to the market in Chosen as they are in the case of Japan proper.

Rapid Increase in Foreign Trade.

The tremendous growth in Chosen's trade is well worth noting. Total exports to all countries, including Japan, increased from 34,388,787 yen (1 yen= $0.4985) in 1914 to 218,277,233 yen in 1921 (a sixfold increase), while imports during the same period increased from 63,231,461 yen to 232,381,584 yen. The greater part of Chosen's exports (about 90 per cent) go to Japan proper, but about 50 per cent of its imports come from foreign countries. If figures were available on reexports of foreign goods from Japan to Chosen, this percentage would no doubt be considerably higher. Of the foreign imports about 50 per cent come from China, 20 per cent from the United States, and 11 per cent from Great Britain, all other countries supplying the remainder.

Foodstuffs and Raw Materials Exported.

Although a great effort has been made to industrialize Chosen during the last few years, especially during the war-boom period, it is still predominately an agricultural country. The principal exports are rice, beans, fish and fish products, barley, wheat, iron, timber, etc.—principally foodstuffs and raw materials.

Imports include a wide variety of commodities, grey sheetings and shirtings heading the list, followed by coal, lumber, machinery, paper, sugar, kerosene, wheat flour, cigars, cigarettes, tobacco, etc. From this list of principal imports it is seen that a good many of Chosen's needs can be obtained in the United States. The lumber, tobacco, and machinery items (especially machinery, both agricultural and industrial) stand out notably in this respect.

Demand for Agricultural Machinery.

The Japanese Government is doing a great deal toward developing Chosen along agricultural lines and is reported to be meeting with considerable success in this respect. As a result of this policy of the home government, the demand for agricultural machinery is increasing every year. The prestige that American agricultural machinery enjoys in the markets of the world should make the sale of this item comparatively easy in Chosen.

Chosen Merits Attention of American Exporters.

The growing importance of Chosen as a market merits increased attention on the part of American exporters. Although this market does not warrant a branch house or a special representative, except in a few lines, such houses as have permanent representation in Japan proper could well afford to extend the activities of such representation to take in Chosen as well.

Additional information regarding the Far East appears in this isue under the following sections:

Automotive products: Burmese motor-vehicle market poor.
Tariffs and trade regulations: Philippine Islands—delivery of merchandise without bill of lading prohibited.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau and its district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquiries; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists, which have been mimeographed, and copies can now be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the titles and file numbers:

American firms, Japan—FE–11019–A.
Boots and shoes, importers and dealers, Canada—BE–1008–A.
Department stores, Cuba—LA–31037.
Drugs and chemicals, importers and dealers, Canary Islands—EUR–11045.
Drugs, chemicals, and toilet articles, importers and dealers, Jamaica—LA–34036.
Drugs and chemicals, importers and dealers, Trinidad—LA–34004–A.
Electrical machinery and apparatus, importers and dealers, Australia—FE–23012–B.
Electrical machinery and supplies, importers and dealers, British Malaysia—FE–18020.
Groceries and provisions, importers and dealers, Bahamas—LA–34031.
Groceries and provisions, importers and dealers, Bermuda—LA–34037.
Groceries and provisions, importers and dealers, Jamaica—LA–34034.
Hardware, importers and dealers, Bermuda—LA–34016–A.
Hardware, importers and dealers, Canary Islands—EUR–11043.
Hardware, importers and dealers, Jamaica—LA–34035.
Hardware, importers and dealers, Trinidad—LA–34005–A.
Hosiery and knitting mills, China—FE–13056–A.
Machinery, importers and dealers, Panama—LA–28020.
Musical instruments, importers and dealers, Paraguay—LA–19013.
Office supplies, importers and dealers, India—FE–21038.
Office supplies, importers and dealers, Indo-China—FE–16010.
Optical goods, importers and dealers, Japan—FE–11030–A.
Optical goods, importers and dealers, Netherlands East Indies—FE–19039.
Paint, importers, Indo-China—FE–16011.
Tobacco, importers and dealers, Canary Islands—EUR–11044.
Vegetable oils, manufacturers and exporters, China—FE–13022–B.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Carleton, Algar E	Amoy, China	July 25	Care Mr. John F. Hobart, agent, American Express Co., St. Albans, Vt.
Gauss, Clarence E	Tsinan, China	July 11	Department of State, Washington, D. C.
Hathaway, jr., Charles M.	Dublin, Ireland	June 25	827 West Lincoln Avenue, Olyphant, Pa.
Lawton, Ezra M	Sydney, Australia (formerly at Sao Paulo, Brazil).	June 28	Department of State Washington, D. C.
McDonough, Dayle C.	La Paz, Bolivia	June 16	Do.
Memminger, Lucien	Leghorn, Italy	June 29	Do.
Ryder, Frederick M	Vancouver, British Columbia.	June 24	160 Atwater Street, West Haven, Conn.
Schnare, Lester L	Swatow, China	July 19	Department of State, Washington. D. C.
Von Treseckow, Egmont C.	Arica, Chile	June 26	Camden, S. C.
Woddell, Alexander W.	Calcutta, India	July 20	Department of State, Washington, D. C.
Wolcott, Henry M	Bilbao, Spain	July 14	Care of Mr. Chester Lord, 95 West One hundred and eighty-third Street, New York City.

The State Department advises that the American consulate at Vladivostok, Siberia, was closed on May 16, and that the records and archives of that office are being stored for the present in the American consulate at Harbin.

AIMS AND ACTIVITIES OF THE CHEMICAL DIVISION.

To foster and promote the introduction and sale of American chemicals and allied products in foreign markets is the primary object of the Chemical Division of the Department of Commerce. The field covered by the division is extensive and, because of the scientific and technical features involved, the innumerable ramifications necessarily present a problem of considerable magnitude and difficulty in attempting to coordinate activities to the point that the greatest service may be rendered where most needed. The following branches of industry are handled by the Chemical Division: Chemicals, general, organic, and inorganic; dyes and coal-tar chemicals; pigments, paints, and varnishes; fertilizers and fertilizer materials; botanical drugs, pharmaceutical and medicinal preparations; essential oils, perfumery, cosmetics, and toilet preparations; explosives and pyroxylin products; and naval stores, gums, and resins.

Though the primary purpose of the division is to assist in the exportation of chemical products, a large proportion of its activities has to do with questions and problems of a domestic character, since the industry, as a whole, although it has made rapid strides in assuming a prominent position among the nation's industries, is not long established and there is a lack of information or of sources from which information may be drawn by those interested. Assistance of a domestic nature is usually handled by the Chemical Division through correspondence and relates to sources of supply and probable consumers, and may involve matters of a scientific or technical nature.

Assistance to the import trade must necessarily be rendered by the Chemical Division, since many raw products not obtainable in this country must be obtained from abroad in order to manufacture finished products. Assistance in this respect is provided through correspondence in answer to specific inquiries or through the publication of articles indicating available sources of supply of these noncompetitive commodities. Monthly surveys of the entire field of chemical imports are prepared and published with a view to informing the trade in a general way as to the general import situation. A specific activity of considerable magnitude and of great value has been the collection, classification, and publication (within a few days after the close of the month under review) of all items appearing in paragraphs 27 and 28 of the present tariff act. These items are dyes and other coal-tar products. The value of this list lies primarily in the fact that American manufacturers or consumers are currently informed as to products of foreign origin with which they must compete or which may be available in the market for purchase at the immediate moment. Through the study and publication of reports received from the Bureau's foreign representatives the division assists exporters in indicating logical markets and in providing to properly qualified American firms confidential information on foreign trade opportunities, credit standing, etc. Special monthly surveys are prepared and published on domestic exports showing the trend of business.

In addition to these more or less routine activities, the Chemical Division proposes to make special studies on such subjects in foreign markets as paints and varnishes, phosphates, fertilizers, disinfectants, etc., and it is hoped that when the proper facilities are available separate monographs will be published on the chemical industries in different foreign countries.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE

JULIUS KLEIN, DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

"Local Color" in Foreign Advertising.

A prominent newspaper in Latin America has recently taken a certain American exporting manufacturer to task on a point connected with his foreign advertising. One of the features of this manufacturer's advertising copy is a cut of several young men engaged in conversation. Unfortunately the men are all of an unmistakable Anglo-Saxon type, and as such utterly unsuited to set off copy intended for Latin American use. As the newspaper critic points out, American readers would not take kindly to advertising cuts which pictured them as of Latin origin.

The American manufacturer is often tempted to use his domestic cuts abroad, in street-car cards, window cuts, and in the foreign-language editions of American export journals. Such practice is poor economy. For the proper use of "local color" in export advertising has brought conspicuous success to American foreign advertising in many lines, just as failure to recognize its necessity has doomed many an otherwise worthy attempt.

American exporters in all cases should strive for "local color" in their export advertising, but they should make sure that they are portraying local conditions or customs with absolute accuracy, even on the most trivial points.

Convincing the Shop Foreman.

When seeking increased export business in semimanufactured products, tools, and other articles used in foreign factories, American exporters must remember that it is often necessary to prove to the individual shop foreman that the goods offered for sale are exactly what he needs in carrying on his part of the work. Often he believes that a particular article made in some foreign country is the only thing that measures up to his specifications.

Though an American sales representative may argue most cogently and insistently in the endeavor to convince the purchasing department of the superior quality of his line of goods, he may find himself facing, in the production end, a "stone wall" of prejudice that prevents even a trial of the American product. This tendency of plant foremen to continue with a familiar brand is ordinarily unfavorable to American trade because it reflects the opinions of previous years when American goods were not so well distributed throughout the world as they are to-day.

The desirable thing for the American salesman to do when confronted with a problem of this kind is to get right out into the works—if such a course is practicable—and present his case effectively to the man who must actually handle his product.

Ask the Bureau First.

Frequently American exporters having difficulties abroad appeal to the Bureau of Foreign and Domestic Commerce for assistance as a last resort.

The bureau is always ready to study individual problems of export trade and to suggest the best course of action. Under certain conditions the bureau's field men—and, through the courtesy of the State Department, the consular officers—are asked to render active aid to the perplexed exporter.

But in a great many cases the exporter has already exhausted the ordinary resources of law and moral suasion before the time when, having failed to solve his problem, he turns to the bureau. Steps already taken by him may have prejudiced the case and rendered the prospect of successful assistance by the bureau problematic.

In a case that recently came before the bureau a New York exporter had shipped some textiles to a merchant in southern Europe. When the draft came due it was not paid and was protested; then an extension of 60 days was granted; and then another. The account being still unpaid, a representative located in a neighboring country was sent to call on the delinquent debtor. The representative placed the account in the hands of an attorney.

In due course the attorney collected several payments in local currency and for many months failed

to remit. In the meantime the drop in exchange greatly reduced the dollar purchasing value of the payments made. Finally the merchant shipped the unsold balance of goods back to New York, without the seller's consent, but the value of these goods had shrunk considerably. The shipper then appealed to the American Chamber of Commerce in the city where the debtor resided, and that institution recommended a new lawyer. The new lawyer refused to handle a case that was in the hands of another lawyer.

The American consul was next appealed to, but the case had already been greatly prejudiced through months of efforts by various agencies. The claim of the American exporter largely consists of loss in exchange and depreciation. There is not the slightest doubt of the soundness of his claim nor is there the slightest possibility of recovery through the courts.

The reason for the latter fact is that it is a jury case, and it is almost a foregone conclusion that the sympathy of the jury in a matter involving apparently a technical loss would be against a supposedly wealthy foreign corporation and for the local merchant.

Yet it is obvious that the merchant has acted in this fashion merely to evade the consequences of a bad bargain. When he ordered the goods the price was right, but he meant to shift the subsequent exchange and market-value losses onto the shoulders of the seller.

The point is that if the exporter had appealed to the Bureau of Foreign and Domestic Commerce in the first instance, the prospects of successful assistance would have been much brighter. At any rate, he might have been saved the experience with the attorney who fails to remit until the dollar value of his collections is approaching zero.

Where "Gouging" Is Respectable.

An American rug buyer recently had some difficulty in explaining to his home office that while he could purchase one rug in Peking for $100, as soon as he placed an order for 100 rugs the price advanced to $125.

It is the peculiar psychology of the Chinese trader that as soon as he discovers his prospective customer wishes to buy in quantity, he raises the price instead of offering a discount. Moreover, it is a common Chinese practice free from all implications of bad business or faulty ethics.

To the American import manager at home such business methods seem a ridiculous perversion of long-established commercial practice. Perhaps he may desire that they be reformed. But in China, and in other parts of the world, change comes very slowly. It is far more economical to adapt American business methods to meet conditions as they are found than to undertake their reformation to conform to American standards.

In both buying and selling abroad knowledge of local conditions and observance of prevailing business practice is indispensable. Recognition of this fact and adaptation of method to meet it is the only key to success in the foreign field.

QUERIES OF GENERAL INTEREST.

Briefly answered by the Bureau.

About 3,600 inquiries are received daily by the Bureau and its district offices compared with about 900 two years ago. The following are among the type of inquiries received:

Q. In which areas standing in special relation to the United States are American products favored in the way of customs duties?

A. Into the noncontiguous territories of Porto Rico, Alaska, and Hawaii products of continental United States are admitted free of all duty, while goods of foreign origin pay the same duties as into the United States proper. American goods shipped to the Philippines on direct bills of lading are admitted free of duty, while all foreign goods pay the regular duties of the Philippine tariff.

In Cuba, products of the United States enjoy a concession in duties ranging from 20 to 40 per cent below the general duties which are applied to products from all other countries. Excepting supplies for governmental use, United States products enjoy no special advantage in the Panama Canal Zone.

Q. How are trade discounts arranged in China?

A. They generally do not take the form of reduction in price but rather an addition in merchandise. Thus a piece-goods importer offers a bolt of cloth with an additional yard "for good measure" rather than a percentage off the list price. This custom extends also to the retail trade, where bean-oil peddlers give a pint and a gill for a pint in order to get trade.

Q. Is it possible to cable a power of attorney to a foreign country?

A. In practicially all foreign countries a power of attorney is valid if it is valid in the country of its origin. In view of the fact that a cablegram does not show within itself the genuineness of the signatures of the grantors, or prove their capacity, a cabled power of attorney would not be ordinarily admitted by foreign courts of law or official bodies without some positive official verification. Powers of attorney may be prepared in ordinary form, verified by the consul of the country in which they are used, and then taken to the embassy or legation of that country. If the matter is of sufficient importance, or if the power of attorney is intended for a transaction with a foreign government, the embassy or legation may at its discretion cable officially to the Ministry of Foreign Affairs that it had seen such and such a power of attorney.

Q. What is the usual method of handling exports from the United States to South Africa?

A. The greater part of the business between the United States and South Africa is now being financed by confirming houses in New York, which extend up to 90 days to South African importers and look after the shipment of the goods, receiving a commission for their services.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.

SLIGHT IMPROVEMENT IN AUSTRIA.

Based on cable from Trade Commissioner William Ford Upson, Vienna, June 6.

As indicated by increasing exports to the Succession States, there was a slow improvement in Austrian industrial and commercial activities during May. During this month exports to the United States also showed an important increase. A marked decline in unemployment was probably the most favorable sign in the industrial situation, while on the other hand the cost of living and wages continued their upward trend. Austrian finances are more satisfactory on account of a lowering of the budget deficit, a considerable income from the tobacco and customs monopolies, a steady note circulation and exchange rate, and a continued rapid increase of savings deposits.

Budget Deficit—Customs and Tobacco Monopolies.

The Government deficit for the first quarter of 1923 (revised figures) amounted to 976,000,000,000 paper crowns. The deficit for May, according to the reconstruction plan, is estimated at 304,000,000,000 paper crowns, as compared with 305,000,000,000 for April. The total deficit through May of this year thus amounted approximately to 1,585,000,000,000 paper crowns, or about $22,324,000. As the estimated deficit for 1923 is 2,374,000,000,000 paper crowns it will be necessary to enforce even greater reforms and economies before the end of the year.

Gross customs revenue for the month of April amounted to 5,600,000 gold crowns and for the first half of May to 1,900,000 gold crowns, making a total of 21,000,000 gold crowns from January 1 to May 15. Gross revenues from the tobacco monopoly for April amounted to 7,500,000 gold crowns and 5,300,000 gold crowns for the first half of May, totaling 35,800,000 gold crowns since the beginning of the year. Thus the total revenue secured by the Government from the customs and tobacco monopolies, which is pledged as security for foreign loans, amounted to 56,800,000 gold crowns (approximately $11,360,000) for the period of January 1 to May 15, 1923.

Circulation Unchanged—Crown Steady.

The note circulation of the National Bank on May 23 was practically the same as on April 30, when it amounted to 4,577,000,000,000 paper crowns. As shown by its equivalent in paper crowns, the metal reserve rose again by 6 per cent from 1,513,000,000,000 crowns on April 30 to 1,610,000,000,000 crowns on May 23. Commercial deposits increased 81 per cent, from 226,000,000,000 crowns to 410,000,000,000 crowns, while commercial discounts increased 13 per cent, from 741,000,000,000 crowns to 834,000,000,000 crowns. The official gold parity remained unchanged at 14,000 paper crowns for 1 gold crown.

Dollar exchange for Austrian crowns continued steady. During May the highest quotation for the dollar was 71,025 crowns, while the lowest was 70,985 crowns. The New York exchange on June 6 continued to quote the Austrian crown at $0.000014, at which rate it has stood since last September.

Savings Deposits and Stock Quotations Favorable.

Savings deposits in 12 banks at the end of April amounted to 171,000,000,000 crowns, against 146,000,000,000 crowns on March 31 and 82,000,000,000 crowns on December 31. An increase of 17 per cent is thus shown for April, and of more than 100 per cent since the beginning of the year.

Quotations on industrial and bank stocks showed slight changes during May. It should be noted, however, that the sensational increase of domestic stocks during April, together with the steady increase of savings deposits, indicates the renewed confidence of the Austrian people in the crown.

Cost of Living—Unemployment—Wages.

The cost of living continued to rise during May, as indicated by the Government and Volkswirt indexes. The Government index (based on 1 for July, 1914) covering food, clothing, heat, and light, stood at 11,440 on May 14, as compared with 10,897 on April 14 and 9,454 on January 14. An increase of 5 per cent is thus shown for the most recent period, and of 21 per cent since the early part of the year. The May index figure, without considering cheap rent, amounted to 14,285, which approaches the index of currency depreciation and indicates the pre-war price level. The Volkswirt index (based on 100 for January, 1921), purporting to represent the minimum living costs in Vienna, was 23,280 on May 31, against 23,032 on April 30, an increase of 1 per cent for the month. Comparing the May figure with 19,932 on December 31, this index shows that the minimum cost of living in Austria has increased 17 per cent up to this month.

The Austrian unemployment situation as indicated by the number of unemployed in the Vienna industrial district shows a very favorable trend. Although a considerable number of Government employees have been discharged in carrying out the reconstruction plan, the fact that unemployment is actually decreasing shows that they are being readily distributed among the industries. This is a favorable sign, as proper distribution of its population is one of Austria's most vital questions. The peak of unemployment in the principal industrial center of Austria, the Vienna district, was reached on April 21, when there were 102,000 unemployed. Before this time unemployment had steadily increased from 18,000 on January 1, 1922, to 90,000 on December 31, 1922, and to 100,000 on March 24 of this year. Since April 21 it has declined to

100,677 on May 5 and 90,700 on May 19, or 11 per cent during two weeks in May.

A new agreement between the metal union and the employers' association which will be effective until the end of August increases wages by 8 per cent. As the metal industry is predominant in Austria, other industries will probably grant similar increases. Bank employees were granted a 20 per cent increase. Similar demands of Government employees are under negotiation.

Foreign Trade for First Quarter—Exports to United States.

Austrian exports for March amounted to 79,000,000 gold crowns and imports to 138,000,000 gold crowns. Total exports for the first quarter of this year amounted to 207,000,000 gold crowns, while imports were 348,000,000 gold crowns, leaving an adverse balance of 141,000,000 gold crowns as compared with 544,000,000 gold crowns for 1922.

Declared exports to the United States during May amounted to $383,000 against $324,500 in April, comprising principally incandescent lamps, artificial silk, wrapping paper, manufactures of leather and rubber, and undressed furs, according to Consul Foster, Vienna. Exports to the United States were valued at $911,777 for the first quarter, thus making a total of $1,619,277 for the first five months of this year as compared with $1,130,559 for the corresponding period of 1922.

DISCUSSION OF THE FRENCH BUDGET CONTINUES.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, June 8.

The French 1923 budget is still under discussion. Provisional monthly credits voted for June show a decrease in provisions for expenditures on account of the Ruhr occupation. French exchange is still fluctuating, with a downward tendency. Business is not active because of the uncertainty of present conditions. The slight decline in bank clearings and in freight loadings seems to indicate a tendency to general slackness, but there is still practically no unemployment. Foreign trade is increasing in value, with imports slightly in excess of exports.

Balancing of General Budget.

In discussing the 1923 budget, the Senate finance committee has recommended placing the 3,000,000,000-franc item of interest on the reconstruction loan in the special budget of recoverable items. It has raised the estimate of revenues in the general budget by 2,000,000,000 francs largely on the basis of tax returns above estimates in the first four months of this year, and has recommended cuts in budget appropriations to the amount of 1,000,000,000 francs. In this way an apparent balance of the general budget would be brought about. The Premier has declared that the estimates of increase in income and the decrease in expenses are both exaggerated, but has accepted from the Chamber of Deputies an estimated cut in expenditures amounting to 409,000,000 francs.

The douziemes provisoires (monthly credits) for June provide for expenditures under the general budget of 2,700,000,000 francs compared with credits of 4,579,000,000 francs for the two months April and May, and a credit of 360,000,000 francs for the special accounts, including the Government railways, annexed to the general budget, compared with 483,000,000 francs for the two earlier months. The special budget provides for expenditures of 1,330,000,000 francs for June, including 42,000,000 francs for the Ruhr occupation, compared with 1,170,000,000 francs and 53,000,000 francs, respectively, for May. The prohibition on the export of capital has been extended to July 1 (it had been previously extended to June 1).

A decree issued on May 31 renews the operation of the commercial treaty between France and Czechoslovakia until July 15, thus avoiding a break in the commercial relations of the two countries. (For details see tariff section of this issue.) The finance committee of the Chamber of Deputies is considering a loan of 300,000,000 francs to Yugoslavia for purchases of goods in France.

Decline in Bank Clearings—Exchange.

The note circulation of the Bank of France on May 31 stood at 36,700,000,000 francs, with advances to the State amounting to 23,000,000,000 francs. The total amount of debits and credits passing through the Paris clearing house during April was 36,500,000,000 francs, a decrease of 4,500,000,000 francs from the March figure. The average daily draft to clear amounted to 760,500,000 francs, compared with 754,000,000 francs in March.

Continued fluctuation marks the exchange situation. From a value of 6.60 cents on May 7 (noon rates for cable transfers, New York City), the franc rose slightly to 6.67 cents on May 23 when a decline set in, at first gradually then more rapidly until the quotation of 6.43 cents was reached on June 4. A reaction to slightly higher levels brought a quotation of 6.46 cents on June 8.

The Coal Situation—Metallurgical Production.

Considerable dissatisfaction has been expressed regarding coal and coke conditions in France. Supplies in May were inferior to those in April on account of declining receipts due to strikes at the Dunkirk docks and on the Belgium railroads and the order to board deliveries from the Ruhr. Conditions are unfavorable, even granting that Ruhr deliveries will be maintained until August at the rates now indicated in the Government reports, which is considered doubtful by the trade. Difficulties of transportation from the Ruhr are increasing, and the Minister of Public Works has announced that no Ruhr coal or coke is to be delivered to neutrals. The production of coal in the Saar Valley is gradually recovering from the effects of the strike, and production of coal and coke in France continues to increase. Imports continue high, and prices are now declining from the May levels.

An improvement has occurred in the operation of blast furnaces in Lorraine and eastern France. Pig iron production in May reached 350,000 tons, an increase of 34,000 tons from March, but still 75,000 tons less than the January production. Exports are declining, and offerings in the local market have increased since March, but supplies are insufficient to meet normal demand. Prices in general are declining.

Textiles and Other Industries.

Cotton spinners are operating satisfactorily, with orders being placed up to December, but the prices leave very little margin of profit. The seasonal demand for lightweight yarns is backward. The demand for woolen goods also is weakening. The linen busi-

ness is improving, and manufacturers are buying because the possibility of obtaining seasonal price concessions is disappearing, and the local flax crop is rendered uncertain by the continued cool weather. The area sown with flax is 15 per cent higher than last year. Silk purchases are dull and prices low, but spinners' production is sold to the end of August. Activity in the demand for artificial silk continues.

Raw materials for leather goods are somewhat lower, but tanners complain that prices still allow little profit in sales of tanned leather. Shoe manufacturers are affected by the backward season. Although factories have work to the end of June, new orders are needed to insure activity in the latter part of the summer. Prices are unchanged, but the retail trade is demanding the cheaper grades of shoes. Some winter orders for these grades are being received.

Fertilizers are meeting little demand, and future prices are uncertain. The market for cyanamid is satisfactory, and sylvinite is moving well owing to seasonal price reductions. The turpentine market is strong, and the demand from Italy, Switzerland, and Germany is good; higher prices are expected.

Railway Freight Traffic Increases.

The average daily freight car loadings in the first four weeks of May were 53,660 cars, compared with 54,900 in April, and 56,900 in March. The revenues of French railways this year through May 13 amounted to 2,113,000,000 francs, an increase of 6.2 per cent over the corresponding period of 1922. The volume of merchandise received at French ports in April was 3,130,000 tons, of which 1,760,000 tons consisted of coal. The export tonnage amounted to 629,000 tons.

Agricultural Conditions—Unemployment Negligible.

The recent bad weather has retarded the growth of crops, most of which were two weeks in advance of the season. Little actual damage has been done, however, and prospects are still good.

The number of unemployed on May 31 was estimated at 10,000. The continuance of unemployment at a negligible figure indicates generally favorable industrial conditions in spite of the uncertainty which prevails with regard to future developments.

Foreign Trade Increasing.

Exports for the first four months of the year reached a value of 9,000,000,000 francs (based on 1921 prices), including 960,000,000 francs for foodstuffs, 2,800,000,000 francs for raw materials, 4,700,000,000 francs for manufactured goods, and 500,000,000 francs for parcel-post shipments. For the month of April the value of exports was approximately 2,500,000,000 francs, compared with 2,475,000,000 francs in March and 2,329,000,000 francs in February. The volume of exports from January to April was 7,700,000 tons, of which 1,492,000 tons were exported in April, compared with 1,822,000 tons in March and 2,490,000 tons in February.

The value of French imports for the first four months (based on importers' declarations) was 9,500,000,000 francs, including 2,200,000,000 francs for foodstuffs, 6,000,000,000 francs for raw materials, and 1,300,000,000 francs for manufactures. The unfavorable balance of trade for the first four months amounted to 500,000,000 francs. The value of April imports was 2,526,000,000 francs, compared with 2,487,000,000 francs for March and 2,343,000,000 francs for February. The volume of imports was 4,120,000 tons, compared with 4,087,000 tons in March and 3,884,000 tons in February.

COLLAPSE OF THE GERMAN MARK.

Based on cables from Commercial Attaché C. E. Herring, Berlin, June 7, 8, and 10.

The unhealthy tendencies noted in Germany during April continued throughout May, although the remarkable inflation of the note circulation during April was not equaled. Unemployment was the greatest since the armistice; indications at present, however, are that it declined toward the end of the month. The Government has no means of partially supporting the unemployed except by continued use of the printing press. The Reichsbank's support of the mark has collapsed, but it will continue to intervene at critical times, such as prevailed around June 1, in order to prevent too many demoralizing declines. The Reichsbank will be able to accomplish this only so far as its limited and decreasing holdings of foreign exchange will permit. The exchange speculation law has thus far been a failure, and a stricter enforcement of this regulation as well as new measures for the support of the mark are now under discussion. The "flight from the mark" was also reflected in a violent bull movement on the stock market, but apparently not to the former extent in the purchase of goods.

Industry Favored by New Mark Decline—Ruhr Industries Slowing Down.

Industry in unoccupied Germany experienced the usual revival of export orders and domestic business as a result of the mark decline following the long period of relative stability. Business improvement is being felt especially by the metallurgical, machine, and textile industries, while the glass, cement, and wood industries continue dull.

Industries in occupied Germany are further slowing down and manufacturing for stock is becoming increasingly impracticable. Most of the coal mines are producing only enough to supply their own needs, the miners still being engaged on emergency jobs. Imports of Swedish ores are still forbidden by the French but the Franco-Swedish agreement looks to an early removal of this embargo. Exports from the occupied area to foreign countries have been facilitated by German and French concessions which release goods ordered before February 20 upon payment of the export duty to both German and French customs, but commerce is still greatly hindered and smuggling is frequent. Exports to unoccupied Germany continued to be impeded by embargoes on many goods and by the requirement of 10 per cent export tax on others.

Labor Disturbances.

The Communist riots in Ruhr cities seriously interrupted an already demoralized trade. The food riots in Dresden and Leipzig resulted seriously in many instances while unemployment demonstrations occurred in Breslau and throughout Thuringia. The general industrial unrest is increasing and there are sporadic strikes, such as that of the harbor workers at Hamburg, but there has been generally no concerted action by labor, both because of lack of funds and also ostensibly for patriotic reasons.

The offer of industry to provide 200,000,000 gold marks annually for reparations conditioned upon private operation of public utilities and abandonment of the 8-hour day has awakened extreme opposition of labor and socialists generally. The partial decontrol of exports was granted after long agitation by industrial interests; a movement is under way for abolishing control over the remaining exports.

Note Circulation Approaching 9,000,000,000,000 Marks.

Reichsbank private discounts amounted to 4,000,000,000,000 marks on May 31, showing an increase of 38 per cent from 2,900,000,000,000 marks on April 30. The note circulation increased 30 per cent, from 6,500,000,000,000 marks to 8,500,000,000,000 marks, during this period. The total floating debt of the German Government on May 31 was 12,100,000,000,000 marks, including 1,800,000,000,000 marks of Darlehnkassenscheine and 10,300,000,000,000 marks of treasury bills, of which 8,000,000,000,000 marks were held by the Reichsbank. Treasury bills amounted to 8,442,000,000,000 marks on April 30, of which 6,225,000,000,000 marks were held by the bank. The customs surcharge now is 11,900 times the pre-war rate.

Stock Market Rising—Capital Increases.

The stock market during the last two months has shown a tendency that more than compensates for mark depreciation, the Berliner Tageblatt index for May 30 indicating a thirteenfold increase in stocks against an eightfold currency decline since January 1. The same index shows an increase of 100 per cent for 159 stocks during May, coal stocks 152 per cent, and steel stocks 128 per cent.

There were 30 bankruptcies during May as compared with 45 for April. The Frankfurter Zeitung gives May capital increases as 13,758,000,000 marks and those for April as 15,900,000,000 marks. These were largely made by banks, public utilities, and metal and machine industries. New incorporations amounted to 11,670,000,000 marks and were largely banks, foodstuffs, metal and machine industries, and insurance companies, showing a decrease of 670,000,000 marks from the April figure. Sixteen corporations issued 90,385,000,000 marks of fixed interest securities.

Cost of Living and Wages Increase—Rapid Price Movements.

The Government cost of living index, covering food, rent, heat, light, and clothing, stood at 3,816 for May, or 29 per cent over April, when it was 2,954. The Government Statistical Office reports that this does not adequately reflect the movement since the new mark fall. The Kuczynski compilations have been discontinued for the summer. According to the statistics of the Industrie and Handelszeitung, the weekly expenditures of a family of four in Berlin averaged on May 1 203,000 marks. These statistics cover food, clothing, rent, heat and light, "cultural" expenses, and transportation. Rationed bread sold on June 4 for 2,500 marks per 1,900-gram loaf and free bread at 4,500 marks per 1,200-gram loaf, showing a considerable increase over the April figures of 900 marks and 2,200 marks, respectively. Milk per liter in Berlin on June 4 cost 1,300 marks. Berlin rents increased 100 per cent on June 1.

The average weekly wage in Berlin for the second half of May was 100,000 marks. Practical wage stabilization during the recent period of comparative mark steadiness in many cases caused incomes to lag behind price increases, so that the workers are now unable to meet the present cost of living increase. This fact combined with the growing unemployment is reflected in an unprecedented tension of industrial relations. The wage increase for miners in June over May is about 50 per cent and the present average weekly wage for miners is about 150,000 marks, which may be typical of June wages.

The Frankfurter Zeitung wholesale price index figure for all commodities as of June 1 was 14,639, or an increase of 77 per cent, since May 1. The textile and leather group increased 96 per cent and foodstuffs 80 per cent.

Remarkable Increase in Unemployment.

Unemployment statistics for the beginning of May indicate the existence of a more serious condition in the German labor market than has existed at any time since the revolution in 1918, when the army was demobilized. Early in May, 7 per cent of a total membership of 6,000,000 in the labor unions was reported totally unemployed, as compared with 6.2 per cent in January, 1919, and 5.9 per cent early in April of this year. The largest increase in the amount of total unemployment has occurred in the tobacco trades, with 32 per cent unemployed; the building trade, 11 per cent; metal workers, 6.5 per cent; and woodworkers, 7.1 per cent.

The increase in part-time work as regards the number of workers has also affected a number of plants working less than half time. Early in May unions including 5,000,000 members reported 28.5 per cent on part time, as against 24.2 early in April. The following percentages of workers in the various trades-unions have been reported as working part time: Shoemakers, 58.2; textile, 51; tobacco, 36.3; clothing, 36.2; metal workers, 39; and woodworkers, 24. The following weekly reduction of hours among the part-time workers has been effected: 21 per cent are working 40 to 47 hours, 26.7 per cent working 32 to 39 hours, 37.7 per cent, 24 to 31 hours, and 14.7 per cent, or 224,000 workers, less than 24 hours. The increasing tension in the employment situation and the prompt reaction of prices to the new mark collapse have been reflected in food riots, peremptory wage demands, and general unrest.

Heavy Coal Imports Cause Large Adverse Balance.

The effects of the industrial deadlock in occupied Germany are being increasingly reflected in the foreign trade of the country as a whole. Foreign trade figures are necessarily inaccurate on account of the substitution of the Franco-Belgian customs control in the occupied area. The total imports in April, according to preliminary figures, amounted to 6,390,000 metric tons, as against 5,200,000 metric tons in March, while exports in April were 1,020,000 metric tons, as compared with 940,000 metric tons in the previous month. Total imports of raw materials and half-finished products aggregated 5,900,000 metric tons. The marked increase in the imports of raw materials is reported by the German Federal statistical office to consist chiefly of coal, of which 4,500,000 metric tons were imported in April, as compared with 3,400,000 in March, 1,400,000 metric tons in February, and 1,000,000 metric tons as the monthly average for 1922. The slight increase in exports was due largely to exports of certain foodstuffs, such as potatoes and salt. The export of finished products, however, declined generally.

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

FAVORABLE CONDITIONS IN PHILIPPINE SUGAR INDUSTRY.

Cable from Trade Commissioner John A. Fowler, Manila, May 24.

Favorable conditions prevail in the Philippine sugar industry. The acreage of next year's crop shows an increase. United States bankers are negotiating bond issue on centrals.

General business was not so active in the Philippines during the month of April as in March, and prices were lower, although still well above production costs. The former high prices received for native products brought unexpected money into the islands, and this, together with an improvement in provincial collections, relieved the financial strain to some extent. The seasonal moving of crops, however, has rendered money tighter, though it is ample for the needs of well-secured business. Banks continue to advise a conservative view of business prospects.

Sugar Prospects Good—Central Bond Issue Planned.

The sugar-milling season is practically completed, inaugurating the purchase of sugar mill machinery and supplies for the next season. Latest estimates place the year's production of exportable sugar at 255,000 tons. Sugar crops have been greatly benefited by May rains, all districts reporting excellent conditions and prospects to date. Preliminary unofficial opinion is that the acreage of the new crop will be increased from 10 to 20 per cent. The use of fertilizers for the next planting will be greatly extended. Next year's sugar crop is unofficially estimated at approximately 300,000 tons, in case normal growing conditions continue.

Preliminary negotiations are being made for a bond issue by United States bankers on the sugar centrals controlled by the Philippine National Bank, to be guaranteed by the Philippine government. The tentative figure is given as $10,000,000.

Government Revenues Increase—Manila Bank Statement.

Government revenues to date show an increase over last year and disbursements for public works are still guaranteed. Various new prospects are now being planned.

The bank examiner's statement covering all Manila banks for the week of May 5 showed total loans, discounts, and overdrafts of 168,973,000 pesos; cash, 15,412,000 pesos; resources, 26,982,000 pesos; working capital of foreign banks, 39,204,000 pesos; and circulation, 108,077,000 pesos (1 peso=$0.50).

Labor Disturbances in April.

There was some labor disturbance in April. An effort to reduce wages caused a dispute involving 2,000, and a farmers' union strike in several Provinces resulted in some destruction of property. No serious results, however, are considered probable.

Seasonal building activity in April maintained the March level. Permits were issued for strong construction to a total value of 524,000 pesos.

ECONOMIC CONDITIONS IN JAVA.

Consul Charles L. Hoover, Batavia, June 2, 1923.

Large loan in Netherlands suggested to relieve Dutch East Indian financial situation. Credit conditions are easier but banks are still vigilant. British interests are investing in Java.

Banks have not released their vigilance, but credit conditions in Batavia are more liberal. Wholesale prices of steel and other imported goods, with the exception of textiles, are higher. Prices of export products are in keeping with world markets. There is little produce speculation and the Batavia share market is quiet. Realty values are approaching a position proportionate to earning capacity. Native living costs are decreasing with lower rice prices. There is satisfactory activity in small-dwelling construction.

It is reported on good authority that British interests are investing heavily in Java tea and rubber estates.

Native Exports for Four Months.

Principal exports from Batavia for the first four months of the current year, in metric tons, are as follows: Copra, 6,200; coffee, 1,300; cinchona, 1,200; black pepper, 2,800; white pepper, 600; tapioca flour, 7,400; tea, 14,800; and tin, 4,500. Exports of rubber for the month of April amounted to 2,600 metric tons.

New Government Loan Suggested—Stocks of Gold and Silver.

Although it has been authoritatively stated that no more government loans will be issued this year, an unauthenticated report is persistent that a 40-year loan of 400,000,000 florins (about $160,000,000) is contemplated at The Hague to cover the deficit of the present and the 1923–24 Dutch East Indian budgets and outstanding loans now falling due, which amount to between 75,000,000 and 100,000,000 florins.

Stocks of gold on April 28 totaled 161,000,000 florins, and of silver 61,000,000 florins. The available metal reserve amounted to 149,000,000 florins, and the total note circulation of the islands to 301,000,000 florins.

Labor Unrest.

East and central Java districts are experiencing considerable labor unrest. On May 8 the entire native railroad personnel participated in a strike. Several freight cars are tied up, but passenger cars continue on schedule. The government is making careful preparations for control, including military guard of both private and government lines, and there is general confidence that the strike will be of short duration. There is no labor unrest in west Java.

STUDY OF ECONOMIC CONDITIONS OF VALUE TO CREDIT MEN.

From an address by Grosvenor Jones, Chief of the Finance and Investment Division of the Department of Commerce, before the Atlanta convention of the National Association of Credit Men, June 13.

The complaint is often made that since 1920 credit men have become so strict in passing on export orders as to seriously hamper the work of the export department of their concerns. Doubtless credit men generally have tightened up a great deal and many of them are leaning backward in their desire to play safe. This is a natural psychological reaction to the experiences they had in 1920–21.

This situation calls for correction. Between the extremes of great liberality and great conservation in granting credit there is a middle position that should now be taken.

Cooperation a Factor in Efficient Export Business.

Recognizing that export trade is important, is highly competitive, and must be carefully cultivated, it is essential that all departments of a company engaged in export trade, whether on a large scale or a small scale, should cooperate in making their export business as efficient as possible.

Foreign business presents more new angles to the credit man than to the export manager. Selling is selling, whether it be in Arizona or Timbuktu. Salesmanship requires adaptation to local conditions, and the export manager, born salesman that he is, instinctively knows how to meet these varying conditions. But the credit man is generally at a loss in determining the present status and trend of business conditions in foreign countries, although he is familiar with domestic business conditions and is trained to the skillful interpretation of a wide range of complete statistical data on the volume of current production, sales, and stocks on hand, which are furnished by trade associations, chambers of commerce, the Department of Commerce through its survey of business conditions, the Federal Reserve Board, the several reserve banks, and various private agencies. And yet it is just as important—perhaps more important—for him to be informed on foreign conditions than on domestic conditions.

The lack of foreign-credit data must be recognized. But recognition must also be given to the fact that many business men are not making the best use of other pertinent foreign data at hand.

Economic Background Indispensable.

If the foreign-credit information available were as complete and accurate as it should be, the credit man would still need to have the bigger and broader background of knowledge of the underlying economic conditions in foreign lands.

But how is a busy credit man to get that knowledge? He may have read the standard publications on the several countries in which his company does an export business. He may be, certainly he should be, as well informed as the export manager on the geography, climate, character of population, customs, and the principal industries of those countries. He may be following in a general way the developments in the political situation in Europe and China and may have his own ideas as to their influence on the international as well as the local economic situation. Yet he needs more detailed and more up-to-date information as to the current economic developments in the several countries and should know how to interpret these developments in their bearing on his firm's business. It might appear that I am asking that the credit man be a walking encyclopedia, but I believe that I am not asking too much.

Foreign trade is a highly technical business; but its technique can be mastered, as so many of our experienced export managers have demonstrated. Like most successful undertakings, it calls for specialization. The export manager should be a specialist in salesmanship in all its phases, and the credit man should be a specialist in foreign crediting in its broadest sense.

Foreign crediting should not be a routine matter—the mere mechanical consulting of credit ratings and credit experience files. It should go deeper than that. To illustrate what I have in mind I shall get down to particular cases.

After the armistice a number of American exporters of foodstuffs, textiles, shoes, etc., shipped huge amounts of these commodities to various European commercial centers adjacent to the Central Empires, in the belief that when the blocakade against Germany was raised these commodities would be quickly sold in that country at good prices. They overestimated the demand in Germany, mistaking potential for actual demand. They overlooked the war stocks which our own Government and that of Great Britain had accumulated in Europe. They forgot that their competitors were following the same course. Moreover, many of them failed to realize that the great European demand for our goods in the period immediately following the armistice was financed largely by the use of credits extended to the European Allies by our Government and that when this unusual form of credit was exhausted the buying power of Europe would be greatly curtailed. They also did not see that even the portion of our European business which was financed by the ordinary private agencies had been accorded a too-liberal credit.

Conditions in Cuba in 1920–21 afford another sad illustration of what should have been avoided. A human being, whether a Cuban or a Chinese, can not eat more than a given amount of rice. When, therefore, Cuban importers continued to place orders for rice far in excess of the quantity that could be consumed in months, the danger signal was set. And when this excess ordering extended to practically all lines of commodities there was ample warning to go

slow, even if sugar was selling at 30 cents a pound. No market can remain glutted for long.

Commerce Reports an Invaluable Aid to Exporter.

To hark back to my question as to how the credit man may keep informed on what is going on in the industries and trade of foreign countries, my answer is that one of the most important sources of such information is the weekly COMMERCE REPORTS, published by the Department of Commerce—particularly in the first few pages, which contain the monthly economic surveys sent by cable from the principal commercial centers abroad. Anyone interested in foreign trade will find the whole issue of value. If, however, the busy credit man has only a few minutes at his disposal, he should devote his time to perusing these economic surveys, for these are the latest news from the foreign field, collected by trained observers who are in close touch with local conditions and know what information our exporters need. These cablegraphic reports are carefully checked up and amplified by the regional experts in the Bureau of Foreign and Domestic Commerce at Washington, who are themselves well informed on economic conditions in the countries covered by them. They are also verified by the commodity and technical experts in the bureau, so as to eliminate possibility of error in statement of facts or in their interpretation.

These cablegraphic economic surveys are the latest refinement in the foreign trade promotion service of the department—one of the many innovations introduced under Mr. Hoover's régime—and a recognition of the fact that foreign trade promotion has advanced beyond the kindergarten stage and is on a more scientific basis.

The value of this cable service is vouched for by our leading exporters and by the principal banks, many of which now depend on COMMERCE REPORTS for up-to-date, reliable information on foreign economic conditions in place of the reports they formerly received by cable from their foreign offices or correspondents.

Recognizing the fact that busy men can devote only a short time to reading the regular publications of special interest to them, these surveys are condensed as much as possible. At the beginning of each survey there is a short summary in black type which contains the high points. If the reader has only two or three minutes he can easily read the headlines of the four or five surveys that appear in each issue and get a good general idea of how things are going in various parts of the world.

Economic Conditions the Key to Credit Safety.

The credit man whose firm is doing business with Chile is much interested in the news that exports of nitrate continue at a high level and are greatly in excess of the exports of last year. It means that Chilean business as a whole is on the upgrade, since the nitrate industry is a key industry in that country, and that the firm can, therefore, expect prompt payment of outstanding Chilean accounts. If similar favorable reports should continue month after month the credit man can O. K. export orders for Chile with greater assurance.

Reports that the drought in Australia has not yet been broken, or that there has been a killing frost in the Sao Paulo coffee district of Brazil will suggest caution to the credit man passing on orders for those countries.

Information of this character is a vital necessity for the credit man. It is fundamental, for it enables him to pass sound and intelligent judgment on foreign credits.

To make the best use of the information contained in these cable surveys the credit man must have a practical knowledge of the normal economic conditions in each country in which his firm does business. He must know, for instance, the key industries in each country and their significance to the prosperity and buying power of that country. He must know that the volume and value of the coffee crop in Costa Rica are the real barometers of business conditions in that Central American State rather than the volume of banana exports, even though the latter loom up larger in the country's export statistics; and he should know why this is the case. If his firm exports goods to Salvador, he should note carefully the progress that is being made in the negotiations of that country for a large foreign loan, since the proceeds of that loan will put that country in better financial condition. I cite the Republic of Salvador because the foreign-credit manager of one of our largest manufacturing companies, which is a creditor of that Government, recently asked me to keep him posted on the progress of these loan negotiations.

Other credit managers are watching the world's market quotations for cacao and the estimates of the cacao crop in Ecuador, since they know that the official exchange rates on New York for that country are based on the selling price of cacao—its principal article of export—and since they are anxious to convert as promptly as possible and at the best possible rates some long outstanding deposits in sucres which they were obliged to take in the crisis of 1920–21.

The fact that the Polish cotton mills are now operating on part-time schedules instead of working two or three shifts a day means much to the credit managers of textile machinery concerns. Even more significant to them is the news that the Chinese cotton mills have applied for Government assistance in raising a foreign loan to tide over their present financial difficulties.

Examples might be multiplied, but enough have been cited to show how information of the character given in the cable economic surveys in COMMERCE REPORTS is indispensable to the credit man and has a practical, dollars-and-cents value to his firm. It is not enough that the export manager use these reports; the credit men should use them, too, for his own particular purposes.

I might dilate on other features of COMMERCE REPORTS and on various other phases of the department's service that are valuable to the credit man, but I have said enough, I hope, to make clear the general importance of foreign trade, the necessity for cultivating it most carefully, and the need for close cooperation between the credit men and the export manager to make the export end of the business a success. In laying great stress on the value to the credit man of the regular reading of the cable economic surveys in COMMERCE REPORTS my thought has been to indicate a simple but effective means for extending his knowledge of foreign business conditions, but I would not have him stop with that, for in my opinion he should vie with the export manager himself in the fullness of information on this subject.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

CHEMICAL INDUSTRY SHOWS PHENOMENAL DEVELOPMENT.

Although there may have been a tendency on the part of exporters of commodities in general to cater to domestic consumption, actuated by the current boom in business, this phase has not been stressed by chemical factors. Exports have registered a steady monthly increase throughout practically the entire field. The increasing demand has been met by fostering a healthy policy in the expansion of production. Chemical manufacturers have been faced with a great task to meet domestic requirements on a competitive basis and in addition have established export organizations to carry on missionary work in the foreign field. The development of this industry has, in reality, been phenomenal, as attested by a study of the import, export, and production statistics.

APRIL EXPORTS OF CHEMICALS AND ALLIED PRODUCTS.

In the export trade of chemicals and allied products from the United States for the month of April, 1923, the general improvement registered during the past months, especially the earlier months of 1923, continued. An increase of 22 per cent was registered for the month of April, 1923, compared with April, 1922, while the four months of 1923 showed a gain of 18 per cent over the 1922 period. Exports of these commodities had a total value of $13,270,818 in April, 1923, and $10,846,118 in the same month of the preceding year.

Important increases, as well as equally marked decreases, were evidenced in our foreign sales of chemicals and allied products during April, 1923. Of the heavy chemicals recording considerable gains, acetate of lime advanced 116 per cent in value, from $72,405 (3,645,869 pounds) in April, 1922, to $156,708 (4,448,824 pounds) in April 1923; dextrine or British gum, 106 per cent, from $39,434 (1,183,954 pounds) to $81,335 (2,223,938 pounds); aluminum sulphate, 63 per cent, from $44,504 (2,742,727 pounds) to $72,385 (3,501,692 pounds); and baking powder, 40 per cent, from $99,584 (230,574 pounds) to $138,447 (346,612 pounds). On the other hand, shipments of copper sulphate dropped 93 per cent, from $41,352 (917,495 pounds) in April, 1922, to $2,673 (47,010 pounds) in April, 1923; calcium carbide, 79 per cent, from $75,927 (1,559,138 pounds) to $16,192 (407,658 pounds); bleaching powder, 67 per cent, from $43,693 (2,788,056 pounds) to $14,649 (659,335 pounds); and glycerin, 53 per cent, from $37,498 (249,085 pounds) to $17,641 (92,102 pounds). The reduction in value but expansion in volume of shipments of sodas and sodium compounds, evident in February and March, continued in April, when $987,911 worth (36,605,402 pounds) were sent abroad.

Drop in Exportation of Sulphur.

A 14 per cent drop was registered in the shipments of sulphur to foreign countries during April, 1923, as compared with April, 1922, exports having declined from $793,746 (53,501 tons) to $679,151 (42,034 tons). Canada was our best customer, with Germany a close second, and France, Spain, and Australia following in the order named.

Coal-Tar Products—Medicinal and Pharmaceutical Preparations.

Foreign shipments of coal-tar products during April, 1923, continued to be favorable. A total of $1,098,615 was reached, which represented a gain of 33 per cent. Of this amount $23,943 (130,762 pounds) were aniline colors, dyes, and stains; and $6,487 (17,577 pounds) photographic chemicals. Sales of coal-tar medicinals dropped from $90,083 (308,765 pounds) in April, 1922, to but $9,937 (16,215 pounds) in April, 1923.

The total value of exports of medicinal and pharmaceutical preparations in April, 1923, exceeded April, 1922, by 22 per cent, growing from $1,372,072 to $1,674,041; those of quinine sulphate and other salts of cinchona more than doubled but antitoxins, serums, and vaccines declined from $28,948 to $26,220.

Increased Shipments of Pigments, Paints, and Varnishes.

Exports of pigments, paints, and varnishes (another growing export industry) rose from a valuation of $937,313 in April, 1922, to $1,373,801 in April, 1923. Expansions were made in foreign shipments of zinc oxide, bone black, carbon and lampblacks, red lead and litharge, and other chemical pigments, while slight reductions occurred in lithopone and white and sublimed lead. Sales of enamel paints grew from $34,400 (144,302 pounds) in April, 1922, to $80,967 (297,468 pounds); other ready-mixed paints from $206,278 (96,840 pounds) to $308,045 (158,991 pounds); and other paints from $105,678 (516,758 pounds) to $188,527 (1,189,675 pounds).

Exports of Fertilizers and Explosives.

In April, for the first time this year, the amount of outgoing shipments of fertilizers and fertilizer materials exceeded that of the corresponding month of 1922, having totaled $2,256,139 (98,236 tons) as compared with $1,666,956 (87,161 tons) in April, 1922. Heavier shipments of sulphate of ammonia and superphosphates were made, but smaller amounts of phosphate materials and prepared fertilizer mixtures were exported.

A large gain (59 per cent) was made in the exports of explosives during the month of April, 1923, when $234,532 (1,744,405 pounds) were shipped abroad, as compared with $147,346 (838,183 pounds) in 1922, but these figures are much smaller than those for March. Dynamite accounted for 86 per cent of this quantity.

Perfumery, Cosmetics, and Other Toilet Preparations.

The foreign demand in April for American perfumery, cosmetics, and other toilet preparations declined in value for the first time for many months, registering a fall of 4 per cent, $499,767 (862,922 pounds) having been exported in April, 1923. Smaller amounts of perfumery and toilet waters, talcum and other toilet powders, and creams, rouges, and other cosmetics were sent abroad in April, 1923, than in April, 1922. Although the quantity of dentifrices exported decreased from 278,732 pounds to 175,384 pounds, the valuation in-

RECOVERY OF CHILEAN NITRATE INDUSTRY.

Consul George A. Mackinson, Valparaiso, April 5.

That the Chilean nitrate industry has almost completely recovered from the disastrous speculative slump of 1921 is evidenced by the fact that sales effected during the first three quarters of the present nitrate year, which began on July 1, total 21,851,078 metric quintals (a metric quintal is one-tenth of a metric ton). This is only 15 per cent less than the quantity sold in the same nine-month period during prosperous war years and represents nearly triple the quantity disposed of during the first three quarters of the past nitrate year.

March sales announced by the Producers' Association amounted to 1,966,331 metric quintals, as compared with 1,685,403 quintals in February and 1,960,742 in January. Sales effected by the association up to the end of March totaled 19,655,346 metric quintals, while "outside" sales, including 1,010,084 quintals credited to the two American companies, amounted to 2,133,762 metric quintals. The delivery dates of the association sales are as follows:

Sales of Chilean nitrate by Producers' Association.

Month of delivery.	For export.	For local consumption.	Total.
1922.	*Metric quintals.*	*Metric quintals.*	*Metric quintals.*
July	2,407,565	1,016	2,408,581
August	1,639,599	7,586	1,647,185
September	1,809,657	9,428	1,819,085
October	1,991,361	17,289	2,008,650
November	1,618,407	5,042	1,623,449
December	109,798	1,609	111,407
1923.			
January	1,977,716	508	1,978,224
February	2,701,970	3,058	2,705,028
March	2,051,595	2,032	2,053,627
April	611,124	508	611,632
May	1,016		1,016
June	2,687,456		2,687,456
Total	19,607,264	48,076	19,655,340

The March production of the 59 plants now working amounted to 1,452,644 metric quintals—an increase of 733,031 quintals over the output of the 31 plants operating during the corresponding month of 1922.

Exports from the various ports of Chile during the past month totaled 2,226,017 metric quintals, as compared with 2,705,979 quintals in February and 2,225,139 quintals in January. Total exports for the first three months of the previous year amounted to only 1,036,480 metric quintals. Approximately 50 per cent of the 1923 exports have gone to the United States.

Stocks on the coast are being steadily reduced and at the close of the month amounted to less than 10,000,000 metric quintals, as compared with 15,713,140 at the end of the third quarter of the last nitrate year. Cable advices received from the London committee placed European stocks at the end of March at only 157,000 metric quintals—a strikingly small amount when it is remembered that just a year ago European supplies totaled 4,800,000 metric quintals.

Exports of Lac from India.

Assistant Trade Commissioner Charles B. Spofford, jr., Calcutta, June 6.

During the first three months of 1923 the exports of lac from India to the United States totaled approximately 96,000 chests of 164 pounds each. Exports to the end of April are expected to bring this figure up to represent about one-half the normal annual shipments to the United States.

The principal lac crop comes in May and June with heavy exports to America usually taking place in the fall, so that the figures for shipments during the early months of this year appear quite large.

Current Paint Market Conditions in Manila.

Cable from Trade Commissioner J. A. Fowler, Manila, May 24.

Paint sales in Manila, Philippine Islands, show still further improvement. The market for red lead remains slow. The overstocked condition of the white-lead market has been relieved and sales continue fair. Stocks of English zinc pastes are large and are vigorously pushed. Linseed oil from British India is selling well.

Additional information regarding chemicals appears in this issue under the following section:

Cable review, western Europe: Little demand for fertilizers in France.

COMMERCIAL INQUIRIES ANSWERED BY BUREAU AND DISTRICT OFFICES.

Correspondence Division, R. H. Brasel, Chief.

The following table shows the number of commercial inquiries answered by the Bureau of Foreign and Domestic Commerce in Washington and its seven district offices in the United States during the periods June 27, 1921, to July 1, 1922; July 2, 1922, to May 26, 1923; and the week ending June 2, 1923:

Class.	June 27, 1921, to July 1, 1922.	July 2, 1922, to May 26, 1923.	Week ended June 2, 1923.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

CABLE COURTESY.

Making a reply by mail to a cable inquiry for a specific quotation is not only questionable courtesy, but generally bad business as well. As an export manager remarked the other day, "Our agents will hardly pay $1 a word merely for the sake of getting into communication with us." Foreign firms do not broadcast inquiries by cable, and the recipient of such may be reasonably sure that real business is in sight. In the domestic market he would spend $20 in expense money running down a far less attractive prospect.

IMPORTANT HYDROELECTRIC DEVELOPMENT IN SOUTHERN ITALY.

Commercial Attaché Henry C. MacLean, Rome, May 10.

Financing of the Societa per le Forze Idrauliche della Sila and other hydroelectric companies in southern Italy, recently arranged by the help of the Government with the Bank of Naples, Bank of Sicily, and others, will provide funds to carry on the work of the important water-power projects in the Sila Mountains in Calabria. This is one of the most ambitious projects undertaken in Italy in recent years.

As early as 1906 engineers made preliminary studies of the hydroelectric possibilities in this district and the present company was formed in 1908. Unfavorable laws regarding water power and lack of funds held up the work. Finally, in 1913, a new law was passed which established more liberal terms in the handling of water-power concessions, and in 1916, during the war, a formal license was given the Societa per le Forze Idrauliche della Sila.

Construction work was finally begun in 1921, but the undertaking presented such large requirements, and necessitated so much preparatory work, such as the building of roads, telephone lines, etc., that progress has been slow. The limited financial resources of the company, as compared with the magnitude of the project, also handicapped the company greatly, and up to the present time little has been done beyond the construction of some roads and buildings, the sinking of test borings at the sites, excavations for foundations of the dams, and about 500 meters of tunnel work.

The plateau of the Sila, which includes an area of more than 1,000 square kilometers, is traversed by a number of rivers, of which the most important are the Neto, Arvo, and Ampollino. Its maximum altitude at Botte Donato is 1,920 meters, from which it descends gradually to a level of 1,250 meters and then drops suddenly to the plain below, which extends from the foot of the mountains to the coast. On this plateau artificial lakes will be created to impound the waters of the rivers in question, and, with a usable head of over 1,000 meters, it is estimated that more than 160,000 horsepower can be produced.

The total cost of the project is estimated at about 400,000,000 lire (1 lira=$0.047 at present exchange). The Government will pay a subsidy of 40 lire per horsepower developed for 15 years, which, on the basis of the estimate of 168,000 horsepower to be developed,

Market for Additional Power Available.

One of the problems to be faced will be that of finding a market for the large amount of electric power that will be made available, since the surrounding districts are little developed and the present demand is limited. Roberto Bisceglia, commenting on the development of the Sila in a recent article, states that the actual needs of Calabria do not exceed 20,000 horsepower, while perhaps 50,000 horsepower can be placed in Puglie, where, in addition to the use of electricity for lighting, there is also a demand for electric power from the local industries and for use in connection with irrigation works. It is probable that a part of the power developed may be carried across the Straits of Messina into Sicily and northward into Campania, but there seems no doubt that the production will exceed the present demand in the available markets. However, industrial development invariably follows cheap power, and there is reason to believe that when the power is available the demand will grow to absorb it.

In addition to the generation of electric power, the large volume of water that will be utilized will also be available for irrigation purposes. It is believed that 15,000 hectares (about 40,000 acres) of land, now practically uncultivated, can be reclaimed by irrigation and that a high degree of agricultural development can be reached in the plain of Cotrone, whose soil is said to be extremely fertile.

Electric Mine Locomotive Competition in England.

The Electrician, May 4.

Lieut. Col. G. R. Lane Fox, British Secretary for Mines, announces that, in order to encourage the production of a safe and efficient type of electrical storage-battery locomotive for use underground in coal mines, and with a view to displacing pit ponies in deep and hot mines, Charles Markham, colliery director of Ringwood Hall, Chesterfield, has placed at his disposal the sum of £1,000, to be offered as a prize for the best vehicle. Judges representative of the coal-mining industry of Great Britain, the Institutions of Mining and Electrical Engineers, and the Mines Department have been appointed to lay down the conditions under which the competition is to be conducted and to adjudicate upon the merits of competing designs.

The competition will be open to manufacturers of any nationality and will remain open for a period adequate to allow competitors in foreign countries and the Dominions to submit their designs. Working trials in England will subsequently be arranged of those vehicles selected for test.

The preliminary details in connection with the competition are approaching completion and a formal an-

Telephone Service in France.

Commercial Attaché Chester Lloyd Jones, Paris, May 8.

At meetings during the Posts, Telegraph, and Telephone Week in France there was considerable criticism of those services, more especially of the telephone service. The meetings were held under the auspices of the President of France and of the Ministers of those departments most closely connected with the work. Discussions indicated that the Government appreciates the necessity for marked improvement in the service.

Only incidental reference was made at the conference to the possibility of giving the telephone service over to private operation. Responsible officials commented very severely on the inferior service rendered by the telephone system. Toll lines were said to be so unsatisfactory as to be hardly a factor in communication in France. Rural service is in its infancy. Other speakers at the conference compared French telephone service with that of other countries and commented on the fact that the telephone was an instrument of everyday use in the United States and an item of luxury in France and at the same time of very restricted value to a French subscriber.

At the end of the sessions the conference expressed itself in favor of the replacement of aerial wires by cables in interurban service at the earliest possible date; the installing of automatic telephone service; and the development of the telephone service in the country through the organization of small cooperative companies.

The Government has put before Parliament a comprehensive plan for the development of the French telephone service, involving the expenditure of 200,000,000 francs per year for 10 years on new equipment. The pledging of an amount so large as this under the financial conditions now obtaining in the Republic has given rise to considerable comment. The plans, however, received the hearty support of all those in attendance at the conference, because of the great importance which the telephone should have in the economic life of the country. The bill authorizing the expenditures has passed the Chamber of Deputies and is now in the hands of the Senate finance committee.

Electrical Trade Notes.

Rapid Growth of Power System in India.

According to press reports the central station in Karachi, India, is now to be doubled in capacity for the third time. The financing has been completed and it is expected that the new equipment will be in operation in six months' time. (Pioneer, April 23.)

Spanish Water-Power Project.

It is reported that one of the large electric supply companies in Spain contemplates the organization of a development company with a capital of 100,000,000 pesetas (1 peseta=$0.193 at normal exchange). It is said that eight water-power sites have been acquired, which will develop a total of about 48,000 horsepower.

Water-Power Legislation in Brazil.

An extract of the law recently put into effect in the State of Minas Geraes has just been transmitted by Commercial Attaché W. L. Schurz, at Rio de Janeiro, Brazil, and will be lent to interested firms. Requests should be made either to district offices of the Bureau or to the Electrical Equipment Division, mentioning reference No. 9477.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

SPECIALTY COMMODITIES IN WORLD MARKETS.

SALE PROSPECTS FOR COOKING AND HEATING EQUIPMENT.

Chinese Market for Aluminum Cooking Utensils.

The hotel trade offers the largest field in China at present for aluminum cooking utensils. Within the past year aluminum kitchen ware has been installed in the New Carleton café and the Astor House Hotel. Similar equipment for the new Majestic Hotel, which is now undergoing extensive alterations, will doubtless be purchased by the Hongkong Hotels Co.

The market for this character of utensils is, however, limited. At present it is confined almost wholly to the European foreign population of China, which, in the aggregate, numbers about 100,000. The Chinese have for centuries used iron, brass, tin, and wooden utensils of the crudest types and are loathe to change their cooking equipment, even where they have the additional purchasing power to do so. Difficulty is even experienced in foreign homes in inducing Chinese servants to use foreign utensils.

One American importer in Shanghai is the agent for three well-known lines of aluminum wares. This concern has been working on the larger department-store trade for four years in an effort to introduce aluminum utensils. The two large Chinese department stores (Wing On's and Sincere's) have recently begun to buy such ware in small quantities, catering principally to the foreign element which patronize their department stores and in the hopes of introducing such wares amongst the better-class Chinese.

The leading foreign department stores are British and orders are usually placed through London offices. However, small initial orders have recently been sold through American importers to this trade. It is impossible to determine from the customs returns of trade the exact proportion of aluminum cooking utensils imported into China. During 1922 Japan ranked first, Great Britain second, Germany third, and the United States fourth in the trade. The latter's share was about 20,071 haikwan taels, the haikwan tael being worth about $0.735 at present exchange. (Assistant Trade Commissioner A. Viola Smith, Shanghai, April 9.)

Gas Heaters in South Africa.

The market for gas heaters in South Africa is limited by the fact that gas for heating, cooking, or lighting is not extensively used in South Africa. There are only four gas-producing plants in the whole Union

and the gas produced by these is too expensive for ordinary cooking and heating purposes, its use being confined chiefly to lighting and to the heating of bath water.

Beginning with January 1, 1923, however, the price of gas in Cape Town was reduced from 11s. 8d. ($2.83 at the normal rate of exchange) to 10s. 6d. ($2.55) per 1,000 cubic feet, which price is subject to a discount of 5 per cent if accounts are paid within 30 days from the date the local statement is rendered. This price reduction may possibly stimulate sales of gas heaters.

The Cape Town and District Gas Light Co. (Ltd.) imports and sells directly to its clients all sorts of gas-using appliances. Most of these imports come from Great Britain. Some of the hardware dealers also handle gas-using appliances. (Consul Charles J. Pisar, Cape Town, April 12.)

Opportunity in France for American Cooking and Water-Heating Stoves.

An American type of coal-burning kitchen stove, with a boiler at the side which provides a continuous supply of hot water, should find a market in northern France, provided the necessary campaign of publicity and education is undertaken.

Although most of the houses in France that have bathing facilities are equipped with appliances for heating water, a few have only kitchen ranges of French make installed which perform the dual capacities of cooking the family food and heating water. Such ranges are inferior to the types used in the United States, in that they heat water by means of a small reservoir, at the side of the fire inside the stove, and the quantity heated is not sufficient for more than one bath, with very little water in the tub.

The American stove, in order to gain a place in the market, must be offered for sale in France at approximately 1,400 francs or, at present exchange, approximately $100. The kitchen stoves ordinarily used in the smaller French homes are about 40 inches square and are ordinarily without water-heating facilities.

Most of the houses are without bathing facilities because of the expense involved in installing gas-heating appliances or in purchasing the larger French-made ranges of dual capacity. With proper demonstration of the American range, it is thought that many householders could be convinced of the benefits to be derived therefrom and would as a consequence install bathing facilities. (Vice Consul William W. Corcoran, Boulogne-sur-Mer, April 23.)

Enameled Kitchen Ware in Argentina.

Domestic factories are adequately supplying the needs for enameled kitchen ware in Argentina. An increasing use of aluminum utensils is noticeable in the homes. Heavy ware is obtained from the United States, but light-weight material is either made locally from imported aluminum sheets or procured from German sources. (Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.)

MARKETS FOR ATHLETIC GOODS.

Sporting Goods in Naples.

Naples offers a fair potential market for various sorts of American sporting goods, reports Consul General Homer M. Byington. Although the field at present is largely in the hands of British manufacturers who offer goods of very fair quality at reasonable prices, there is no reason why American goods of the same character can not be marketed on the same terms.

The most popular sport in Naples is rowing. In consequence, shells, sculls, and other rowing equipment are much in demand. Keen competition would have to be met from French and Italian manufacturers of these products, who have built up local connections. Among the other sports, bathing, tennis, soccer football, and shooting are popular during eight months of the year, which furnish a market for a wide variety of athletic goods.

Thus, among the sporting goods which might find a market may be numbered canoes, tennis rackets, bathing suits, duck decoys, footballs, wading boots, tennis shoes, and roller skates A dozen other articles might be mentioned that could be sold in small quantities, but the foregoing would probably be the most important.

One of the largest sporting-goods stores in Naples quotes the following prices for the articles named above; Men's tennis shoes, $2.75; women's tennis shoes, $2.25; tennis rackets, $6.25; tennis balls, $5 a dozen; men's woolen bathing suits, $2.25; women's woolen bathing suits, $7.50; men's silk bathing suits, $3.75; women's silk bathing suits, $17.50; soccer footballs, $4.25; roller skates, $6.75; wading boots, $10.50; duck calls, $0.27. The goods are very largely of English manufacture. Conversions have been made at the rate of 20 lire to the dollar. The prices given are not the highest; an effort has been made to give the average prices. Thus, goods costing more than the amounts are not necessarily under too severe a handicap.

It seems probable that a more exhaustive canvass of the field would reveal many more articles that would find a market in Naples. The sale of canoes would include leeboards, sails, and air cushions. At present there is but one canoe on the Bay of Naples which, from the point of view of the salesman, may be said to have done valuable advertising work. There are no canoes as yet on the market. It is believed that little difficulty would be encountered in obtaining 2,000 lire ($100) or more for well-made canoes. All of the dealers questioned have expressed a desire for illustrated catalogues and price lists.

[A list of dealers in sporting goods in Naples may be obtained from the Bureau of Foreign and Domestic Commerce by referring to file No. C. I-69.]

Increasing Sales of Athletic Goods in Calais.

Interest in sports at Calais is increasing. This means that, although no athletic goods of American origin have as yet appeared in the market, sales could in all probability be developed. Tennis, golf, boxing, rowing, and soccer football are attaining increasing popularity. This latter sport, indeed, is much more popular than in the United States.

A particular item for which there should be a fair market is tennis shoes. The best tennis shoes now offered are of Canadian manufacture and retail at 20 francs. These shoes are of excellent quality and are very popular. While tennis shoes are sold by sporting-goods dealers, they are also handled by retail shoe stores, which, in reality, do the larger volume of this business. These stores do not import directly but receive their supplies from Paris.

There are no importers of sporting goods in this district, the market being supplied here from Paris as a rule. Various retail stores carry small stocks, but

none can be interested in importation. (Consul Thomas D. Davis, Calais, May 1.)

Argentine Market for Sporting Goods.

Soccer football, tennis, golf, cricket, hockey, and polo all have many devotees in Argentina, but the business occasioned by supplying the equipment for these sports, which is considerable, is under the influence of nationality and price, dominated by Great Britain. Most of the retail trade is in the hands of British companies who sell English products at prices lower than those prevailing for American goods of similar grade. (Trade Commissioner Clarence C. Brooks, Buenos Aires, April 9.)

Conditions in the German Bicycle Industry.

Conditions in the German bicycle industry have been satisfactory as a whole, although prices quoted have in some instances been below the cost of production. The cause of this has been due to the fact that some of the German manufacturers have been forced to bring their prices down to the same level as those quoted by British competitors. The supply of raw material has been more plentiful. High freight rates to distant points have restricted business somewhat. It is expected that the volume of production will have to be reduced in the near future if the purchasing power of the country continues to decline. In general export trade has been satisfactory, although in some cases prices have not come up to expectations.

The Spanish Market for Athletic Goods.

Sports of all kinds are increasing in popularity in Spain at a tremendous rate. Football especially seems to have taken the country by storm, the games being attended quite often by 30,000 or 40,000 enthusiasts. Tennis is fairly popular throughout Spain and is played practically all year round. A fair share of the tennis equipment is American, especially the high-priced American rackets. Golf is followed to some extent by the aristocrats of Spain and by resident foreigners in the cities, but aside from this it is not very popular. A large number of American motor cycles are in use in the army and in taxi service in the various cities. Ice skating was introduced to the Spanish public this year by means of an artificial ice rink, but it is felt that it was too fashionable to be popular, although many of the local sporting-goods dealers ordered stocks of skates, shoes, and hockey equipment. (Commercial Attaché Charles H. Cunningham, Spain, April 5.)

Favorable Market for American Furniture in Naples.

Consul Leon Dominian, Rome, Italy.

The market for American wooden furniture in Naples is well worth study on the part of American furniture manufacturers. Furniture made in Italy sells at high prices and the high grade and practical styles of the American product are unknown in the country.

The suggestion has been made that it would be advantageous to furniture makers in the United States, as well as to consumers in Italy, if furniture parts were shipped from the United States and assembled in finishing factories established in Naples. Such a plan should not be contemplated, however, without very careful consideration of the various factors involved.

The Bulgarian Market for Beds.

Consul Graham H. Kemper, Sofia, April 27.

The market in Bulgaria for beds is confined almost entirely to the cities. Here the most popular styles are single iron beds with round posts, and all sorts of wooden beds. Another popular style is the iron bed with solid sheet-iron head and foot painted in variegated colors.

The greater part of the iron beds are imported, principally from Vienna. Single beds without springs retail for between 1,500 and 2,000 leva (the Bulgarian lev is quoted at about $0.0082.) They are usually light. A small iron bed or cot, locally made, including springs attached, is retailed at 1,200 leva.

Wooden beds are practically all made locally and are not of the first quality. They retail at 1,400 to 2,000 leva, including springs. Springs are sold separately for 700 to 900 leva.

The beds with sheet-iron head and foot were formerly imported from Vienna and retail at from 2,500 to 5,000 leva. There is a factory at Rustchuk, Bulgaria, manufacturing such beds.

There are a few brass beds on sale, ranging in price between 7,000 and 14,000 leva, according to size and weight. These prices put them beyond the reach of a majority of the population. They come from Austria and Germany.

Birmingham Market for Soda-Fountain Equipment.

Consul J. F. Jewell, Birmingham, England, April 28.

The market for iced delicacies and soft drinks in Birmingham, England, is capable of large development. At present these goods are produced and sold in Birmingham only on a small scale. Usually only plain cream is served. Many people are not familiar with ice-cream soda and other fancy dishes, although there has been a marked increase in their popularity in Birmingham during the past two years, in which period three well-equipped, up-to-date American soda fountains have been established in the city, but as yet no fountains are to be found in hotels or confectioners' shops. Drug stores, or chemists' shops, do not cater to the demand for confectionery and similar goods in England as they do in the United States. As yet there are not in Birmingham, or any of the surrounding cities, any adequate provisions for furnishing refreshments to after-theater crowds. Advertisements and exhibitions in London of American fountains and accessories have greatly stimulated the trade in that district. There is no reason to doubt that similar methods would succeed here.

Difficulties to Be Overcome.

There are, however, certain obstacles to be overcome. English markets are traditionally conservative. The sale of a new line in this country is apt, therefore, to be more difficult than in the United States. There is also the habit of taking afternoon tea—a habit that has become so firmly established that it can not but interfere with the introduction of new foods and drinks which are usually served between the three chief meals of the day. The summer climate of this country, too, has not the sweltering heat which, in many parts of the United States, demands iced drinks and cooling foods. Finally, there are stringent regulations in

effect regarding the closing of confectionery and food shops. By law such shops must be closed by 9.30 o'clock in the evening, and all day Sunday, this law being operative throughout England.

Method of Introducing Soda Fountains.

Soda fountains and accessories are manufactured to a somewhat limited extent in this country; but, generally speaking, they are not so up-to-date as those of American make. There do not appear to be any portable fountains, either in use in this district or manufactured in this country.

The best method of introducing and selling articles of this kind appears to be either through some general manufacturer's agent or one that specializes in goods of a similar nature.

The Saxon Toy Industry.

Consul Louis G. Dreyfus, jr., Dresden, March 17.

The manufacture of toys ranks among the leading export industries of Germany, judged by its total output compared with the output of other industries. While Germany has been the foremost furnisher of the world market, so far as toys are concerned, the United States has become a very serious competitor and its goods are now invading many markets formerly held by Germany.

The export volume of the German toy industry during the calendar year 1912 was 52,399,500 kilos, with a value of 92,130,000 marks, while in the calendar year 1922 it was 60,733,300 kilos, valued at 31,049,194,000 marks. These figures indicate that the pre-war level has again been reached. Average prices, however, have not kept pace with the depreciation of the currency. Average prices for the period from January to October, 1912, amount to 171 marks per 100 kilos and for the period from January to October, 1922, to only 20,463 marks, which is not quite 120 times the pre-war average price.

The principal places where wooden toys are manufactured in Saxony are Seiffen and vicinity, Olbernhau, Grunhainichen, Eppendorf, Waldkirchen, Borstendorf, and numerous other small villages in the upper and middle part of the Saxon mountains. Olbernhau is the center for the manufacture of toys out of sheet iron (children's guns, etc.,); Marienberg, Zoblitz, and Olbernhau for puppets, puppet plays, etc. Toys of papier-maché are made in Annaberg and Buchholz.

The Cuban Jewelry Market.

Consul John R. Putnam, Habana, April 24.

There is noticeable at present a slight improvement in the jewelry business in Cuba, but the trade is still far from normal. Importations of European goods (particularly German) are increasing in volume, but the American machine-made jewelry is able to compete with European manufactures and such goods are still principally brought from the United States.

All classes of jewelry are sold in Cuba. Earrings are worn universally and form an important item, as do articles of religious use or significance, for which there is an excellent demand. This is particularly the case as regards medallions of saints.

A manufacturers' agent has stated that the best method of handling sales is through a local agent, who could deal directly with the merchants and obtain correct credit information; and that reliable credit ratings, through banks and commercial reporting agencies, are difficult to obtain as regards the jewelry trade.

Market for School Equipment in France.

Commercial Attaché Chester L. Jones, Paris, April 28.

The prospective market for American school equipment in France depends largely on the policy of the Ministry of Public Instruction, which exercises general supervision over purchases by the city and town authorities.

At present there are some 35 models of desks and chairs which were approved by the Government authorities 20 years ago. Since that time slight improvements have been made from time to time. Prior to the war some of the equipment manufactured according to these models was purchased in the United Kingdom. Since the war, on account of the drop in the purchasing power of the franc and the general French policy of restricting imports, it has been an administrative policy to purchase school equipment from a limited number of French firms which have been granted the right to submit tenders when new equipment is required.

A new model of desk and chair is being studied and, if approved, will be manufactured locally to replace gradually worn-out equipment. Thus the chances for selling school equipment in France will depend largely on convincing the Ministry of Public Instruction that the American product merits consideration.

Cutlery Trade in Mexico.

Market in Central Mexico.

Practically all the better grades of cutlery that reach central Mexico are now coming from the United States. In the cheaper classes, however, German hardware manufacturers furnish keen competition, as they are able to quote lower prices and longer credits. Very little English cutlery is seen.

Rather slow buying on the part of local retailers is a feature of the present market because large stocks have been on hand since 1921, which was the period of greatest trade depression in central Mexico. The outlook for the coming year is much better, however, than at this time a year ago. The exchange situation, which has been less a price barrier in this portion of Mexico than in certain other parts of Latin America, is now more favorable to American purchases. Local retailers are wondering whether, in view of the recent political developments in industrial Germany, the German market will remain open to them much longer. American exporters, using the most intelligent merchandising methods, such as the selection of able traveling salesmen, should be in a position to take advantage of this probable contingency.

Pocket and pen knives and scissors of German manufacture, such as the "Arbolito" and "Angelito" marks, are very popular in central Mexico. American razors, particularly safety razors, on the other hand, are held in preference. The cheaper German safety razor is not sold in as large quantities as is the better American brand retailing at about 10 pesos. Silverware, including plated table cutlery, is chiefly imported

from the United States. Miscellaneous cutlery bordering on the line of edged tools comes almost exclusively from the United States.

American manufacturers will undoubtedly find it rather difficult to supplant at once the German manufactured article, which has had such an excellent reputation in the cutlery line in practically all parts of Latin America. Only by the gradual introduction of the best American cutlery, by the most improved sales methods, placed upon this market at the very lowest prices compatible with a fair profit, may advantage now be taken on the existing industrial order. (Consul Lee R. Blohm, aquascalientes, March 17.)

The Cutlery Market of Yucatan.

The chief demand for cutlery in Yucatan is for axes; pocket, pen, and butcher knives; tableware of the cheaper grade; and razors. The first of these is of greatest importance, as it is extensively used in clearing fields for the production of sisal. Butcher knives are often employed in cutting the leaves of the sisal plants. The United States predominates in the trade in axes and butcher knives.

Pocket and pen knives are in limited demand, and many of the natives carry sheath knives. Tableware of the cheapest variety is sold in fair quantities. The German straight razor, which formerly dominated the market, is gradually being displaced by American safety razors.

Miscellaneous cutlery sold in the Yucatan market has been represented by a short broad knife known as a "moharra" from its resemblance to a fish of that name. This is used chiefly by butchers and is of local manufacture. American meat choppers are also used to a certain extent, and certain dealers carry a line of American sailors' knives for use on small coasting vessels.

Orders for cutlery are quite generally placed with export commission houses in New York and New Orleans. Dealers generally expect quotations to be f. o. b. United States port or c. i. f. Progreso. Ocean freight and marine insurance are customarily paid in the United States by the manufacturer or export commission agent, or freight is forwarded and the amount thereof billed to the Yucatan importer. (American Consul O. Gaylord Marsh, Progreso, April 20.)

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

PROFITS AND FUTURE BUSINESS THROUGH GOVERNMENT ASSISTANCE.

No export manager would overlook an opportunity to secure a $10,000 order. And yet—have you regularly perused the last two pages of Commerce Reports under the heading "Trade opportunities"? Some of the largest firms in the automotive industry have informed us that through our trade opportunities they have obtained business varying from $200 to $20,000 and have frequently located suitable representatives. The number of such inquiries from foreign firms desiring to purchase American automotive products or to secure the representation for manufacturers is steadily increasing, 21 being received during the last week of May alone. These trade opportunities come from almost every country in the world and cover motor vehicles, as well as accessories and equipment, marine engines and motor boats, and all other automotive products. They are published in Commerce Reports only after a careful investigation of the inquiring firm.

"TRANSPORTATION ENGINEER" NEEDED TO SELL TRUCKS IN BRAZIL.

Assistant Trade Commissioner M. A. Cramer, Rio de Janeiro, April 2.

The motor-truck situation in Brazil has reached the stage where it becomes necessary for manufacturers to secure the services of a "transportation engineer," either as an agent or in conjunction with a branch office. In either case it will be necessary to finance him without adequate returns, as it will take at least two years of hard work to bring about sales that will be sufficiently remunerative.

As in other markets, in order to bring profits trucks must be sold, first, on a basis of furnishing automotive transportation at a saving over other methods and, second, on a basis of individual merit. With such requirements there are few Brazilians in a position to represent properly an American manufacturer. It will be necessary to secure the services of an American who knows American sales methods, who has the necessary grit and energy, and who can speak such Portuguese as will enable him to make connections.

Present Truck Situation.

The principal users of motor trucks in Brazil are transportation companies. Many of them are unimportant, but others have 20 trucks in service. Ice manufacturers come next; some of them use their trucks for other purposes when not requiring them for carrying ice. Breweries are potential buyers, as nearly all of them are using horses at the present time. Dry-goods houses, tailors, and other merchants are using delivery trucks in increasing numbers.

While figures of actual truck registration are not available, reliable estimates place the number in use in Rio de Janeiro at 1,500, in Sao Paulo at 300, and in Santos at about 250; these three cities use approximately 80 to 85 per cent of the trucks in Brazil. Many of these trucks are old and will have to be replaced at an early date, but even with these prospective sales in view, it is difficult to convince anyone that a truck agency is profitable.

Conditions Limiting the Demand for Motor Trucks.

There are many factors that limit the market for motor trucks in Brazil. The principal ones are the narrow, rough, and poorly paved streets in most Brazilian cities and the lack of well-developed road systems outside of the State of Sao Paulo. Other influencing factors are the low wages for manual labor and the low prices of mules. A driver with a team of mules and wagon can be employed for 30 milreis a day.

Trucks at the present time are used preeminently for short hauls; the development of longer hauls is re-

tarded by the tram and railway service. In Rio de Janeiro the trams touch every part of the city and provide special cars to deliver large packages, including fruits and vegetables; the railways provide a fair service to the suburbs of the city. The consignee comes to the car tracks and gets his small freight, or to the suburban station in case the delivery is made by the railway.

Delivery of small articles to the consumer, including clothes, flour, and other merchandise, is for the most part effected by messengers. Furniture and large articles are transported in men-drawn two-wheeled carts—the most efficient method in some of the narrow, crowded streets of the city.

In contrast to these limiting factors are the undertakings in certain parts of the country in the matter of road building and initiating of bus lines, all of which offer possibilities for the developing of sales.

Types of Trucks in Demand.

Perhaps 400 of the estimated 1,500 trucks in Rio de Janeiro and probably one-half of the 300 in Sao Paulo are of the light 1-ton type. Five-ton trucks rank next in popularity, followed by those of 3-ton capacity. Both of the latter types are fitted with solid tires. Practically all of the lighter types are the products of an American assembling plant at Sao Paulo. Of the heavy trucks, the majority are German, Swiss, and French makes, the German "Benz" and the Swiss "Saurer" predominating. A large variety of French trucks are in use. Prices approximate one another more or less, the average local cost of a 5-ton truck delivered in Rio de Janeiro being about 32,000 milreis, and of a 3-ton about 26,000 milreis. However, the local agency of the French Berliot is offering the former type at 24,000 and the latter at 22,000 milreis. Prices of light trucks at present are 15,000 milreis for a Berliet of 800 kilos capacity of 15 horsepower; 18,000 milreis for a Berliet of 1½-ton capacity of 15 horsepower; 19,500 milreis for a 1½-ton "Benz" of 35 horsepower; 5,000 milreis for the open-wagon model of a low-priced American car assembled at Sao Paulo, and 7,000 for the closed delivery model. Prices naturally fluctuate with the exchange, and the recent drop in exchange value of the milreis will undoubtedly result in higher prices than those given above.

American heavy trucks are not sold in the Brazilian market. It is difficult to say what effect their introduction might have on competitive prices. Many of the German and French makes in use at the present time are secondhand army trucks and will undoubtedly wear out in a short time. On the other hand, a number of idle trucks are now in the hands of construction engineers, purchased for carrying out Government contracts that were subsequently canceled under the strictly economic policy of the present administration. About 50 of these trucks at Rio de Janeiro and 30 at Sao Paulo can be purchased at low prices.

Truck Body-Building Industry Growing.

The body-building industry is growing continually in Rio de Janeiro and Sao Paulo. An open plain body of a 2-ton truck can be built here for 1,700 milreis; of a 5-ton truck for about 2,000 milreis. Good work is also done on dump-truck bodies, as well as closed delivery bodies for light-weight trucks. Many bodies are imported, however, as there is a difference of opinion regarding the quality of domestic-built bodies, compared with those made in foreign countries.

EAST AFRICAN MARKET FOR MOTOR CYCLES.

Consul William L. Jenkins, Nairobi, Kenya Colony, Africa, April 16.

Motor cycles evidently meet the transportation needs of the Nairobi consular district better than do motor cars, as the 1922 registration showed 1,753 cycles and 1,600 cars. While most of the motor cycles are in the Colony and Protectorate of Kenya (1,195), the Uganda Protectorate registered 361, the Zanzibar Protectorate 112, and Tanganyika Territory 85. British makes comprised 76 per cent of the total number, American 22 per cent, and Continental the remainder.

Motor cycles afford the cheapest and in many cases the most rapid means of travel in the district, as there are no street cars and only two railroads—one in Kenya Colony and one in Tanganyika Territory. Practically all the motor cycles are owned by business men going to and from their work and by farmers going to and from urban centers.

Roads and Taxes Favorable to Motor Cycles.

The roads in and about towns are good; but, in the outlying districts, with the exception of Uganda and Zanzibar, where all highways are kept in excellent condition, most of the roads are poor and often impassable in the rainy season. The Royal East African Automobile Association, of which 70 per cent of the white inhabitants are members, is a strong and important body in aiding construction and maintenance of good roads; but most of the work and the financing is done by the respective Governments.

Taxes on motor cycles vary throughout the district; in Kenya Colony they are 15 shillings for 3 horsepower and under, and 20 shillings for over 3 horsepower; in Uganda and Tanganyika, 20 shillings for machines with side cars; in Zanzibar the tax is only 10 rupees, irrespective of size or power. An import duty of only 10 per cent is imposed on motor vehicles and parts in Zanzibar; in the rest of the district the import tax is 30 per cent. There are no tariff preferences.

Light British Machines Predominate.

Light and medium weight machines are most popular, especially for town use, although high-powered machines are used for long-distance riding. The light weight constitute 15 per cent of the total, the medium 65 per cent, and the heavy 20 per cent. The first two are preferred on account of their greater economy in fuel and tire consumption—the climate is very hard on tires that are much exposed to the sun. There is no preference with regard to mechanical features; the demand is only for durability and simplicity. Dark and quiet colors are most popular. The law requires internal and external hub brakes, and the rule of the road is to the left.

Twelve different British and four American makes are represented, with the British-made light and medium weight machines controlling the market in spite of their higher price. American cycles are too heavy, except for long-distance travel. The American sheet-metal side car, however, is more popular than the 3-ply wooden car of British make, as it is not affected by tropical conditions.

The prices of American machines range about midway between the lowest and highest prices of British makes on the market.

Medium-Weight Models Wanted—Advertising Conditions.

The introduction of low-priced passenger cars has somewhat lessened the demand for motor cycles; but

the latter will continue to enjoy good sales, as their initial cost and maintenance are less. The kind of vehicle used depends almost entirely on the income of the prospective purchaser, but maintenance and operating costs are also seriously considered. Gasoline sells at $1.20 per gallon in Nairobi, and is even more expensive in the lake regions of Kenya and Tanganyika and throughout Uganda. American manufacturers can increase their sales by making a medium-weight machine of good quality. Producers of motor cars have done this, and now control the market in their field.

Advertising is carried in local newspapers, although not extensively. Dealers handling American makes prefer to have advertisements prepared by the manufacturer. Line cuts and coarse halftone plates could be used to advantage. English is used in all publications. There are no trade associations promoting motor-cycle sales.

The showrooms of most dealers are up to date, displays are tastefully arranged, and fair quantities of spares are carried in stock.

[A dealer list, supplemented by complete details regarding capital, storage, and display facilities, other lines carried, and local prices of different makes, can be secured from the Automotive Division through the appropriate district or cooperative office, by applying for Exhibit No. 94760.]

American Accessory Makers' Share in Spanish Market.

Commercial Attaché Charles H. Cunningham, Madrid, May 9.

Although American makes in some lines of auto accessories either dominate the Spanish market or secure a fair share of its demand, in general French accessories are enable to command about 75 per cent of the field on account of their low prices. These prices are the result in part of the depreciation of the franc—accentuated by the removal of the surcharge on depreciated currencies over a year ago through the commercial treaty with France—and in part of low freight rates and inexpensive packing. All these have offset the higher cost of French over American production. In addition, French accessory houses extend liberal terms, while American terms are usually cash f. o. b. New York.

French and American Horns Share Market.

There is an even market for French and American electric horns, and the rest of the market is divided between British and German makes. French products offer very serious competition in the replacement market, as they have about 35 per cent of this business in Spain and undersell American makes. American horns supplied with American cars, however, are of such good quality that they seldom wear out and hence are rarely replaced.

In some cities municipal regulations prohibit the use of electric horns. This results in a big demand for bulb horns, and their sale is augmented by the flood of cheap cars now invading Spain. The straight, simple hand horn is universally used. At present the French and German makes predominate, selling for 10 to 25 pesetas, or about one-third the price of American products. One American-made hand siren of high price has disappeared from the market on account of its rapid wear and its disagreeable sound.

American Spark Plugs Dominate the Market.

American spark plugs secured a substantial hold on the Spanish market during the war, when in one year a single Madrid firm that had never before handled American spark plugs sold 60,000. They are still considered the best by many, especially by those handling American cars, as their ignition and electric systems are so much superior to those of European makes that there is little room for choice.

The highest-priced plug on the Spanish market is the "K. L. G." (British), selling for 7.50 pesetas each; the same make of plug for aviation purposes sells for 12.50 pesetas. The German "Bosch" plug, which was popular before the war, is again offered; its price recently has been advanced from 4.50 to 6.50 pesetas. Miscellaneous German plugs have lately been offered as low as 3 pesetas. For the last year and a half, German manufacturers have advertised their products extensively and have sold them more cheaply than have American and English manufacturers.

In spite of this competition, more American plugs are still being sold in Spain than of any other nationality, although dealers consider their prices too high. One dealer claims that he could sell 100,000 of them, if exchange and other conditions would permit the price to remain at 5 pesetas. Two well-known American plugs now sell for 4.75 and 5.50 pesetas, respectively.

The various important makes sell in Spain approximately in the following relative percentages: Bosch (German), 30 per cent; K. L. G. (British), 10 per cent; two prominent American plugs, 35 per cent; other makes, 25 per cent.

American Piston Rings Face Severe Competition.

That competition in the piston-ring field is keen is evident from the fact that more than a dozen different grades and kinds of rings are offered on the Spanish market. The most widely accepted are the American makes, selling at 4 to 6 pesetas; dealers estimate their proportion of sales at between 40 and 60 per cent. The nearest rival is a Belgian piston ring, although French and British rings also are offered. American cars have created the market for American piston rings, and their sales have increased considerably during the last two years as the result of an influx of low-priced American cars.

American Outboard Marine Motors Succeed in British Market.

Assistant Trade Commissioner William M. Park, London, May 7.

The average number of outboard motors sold in the United Kingdom each year is approximately 1,000. American makes lead the sales, although Swedish motors are close competitors. The principal makes of the latter are the "Knight" (known in Sweden as the "Archimedes," the "Comet," and the "Penta." The German "Fortis" and the British "Water Motor" also are being sold, although the latter is more expensive than any other make on the market and sells less readily for that reason. Prices are fairly steady in the range of £30 to £40. The prices of American motors are quoted entirely in line to meet competition. There is no import duty on outboard motors, except that of 33⅓ per cent ad valorem on the magneto. American manufacturers are on equal footing with all foreign competitors, as no countries entitled to im-

perial preference export outboard motors to the United Kingdom.

The present season has started out very auspiciously for increased sales, in contrast to the lower volume during the past two years. The twin-cylinder motor is fast replacing the single-cylinder machine.

Local Restrictions Lower Volume of Sales.

Certain local features tend to restrict any rapid growth in the demand for outboard motors, although it is susceptible of considerable future expansion. Pleasure-boat construction is in no way standardized, as there is no mass production; most of the pleasure boats now on the rivers need some slight structural alterations before outboard motors can be attached. Furthermore, owners of boats for hire hesitate to rent them if an outboard motor is to be applied, contending that such motor causes undue wear and tear on the boat and makes it unsuitable for rowing purposes. On the Thames, the longest pleasure river in England, the heavy lock dues that are levied restrict the use of outboard motors. The Thames Conservancy imposes this restriction on the basis that motor boats are a menace to a large number of rowboats, sailboats, and punts. Only 60 outboard motors were registered during 1922, over a distance of 160 miles on the Thames River. Outboard motors are used more extensively on other rivers, particularly those adjacent to larger towns.

Dealers Desire Manufacturers' Assistance.

Certain dealers in London handling American outboard motors feel that a larger volume of sales could be made if American manufacturers would grant better terms, longer credit facilities, and advertising allowances, such as are granted by their Swedish competitors. Generally speaking, these dealers are small concerns of limited capital and can not satisfactorily undertake the financing and advertising of their lines. Such assistance, in combination with a more rapid development by American manufacturers of the twin-cylinder motor, which is fast gaining popularity, would doubtless result in increased sales of American makes in the British markets.

Highway Work from Acapulco to Mexico City.

Work has been resumed on the Government highway between Acapulco and Mexico City, a distance of 250 miles, after having been discontinued temporarily through lack of funds. It is now possible to make the journey in three days, but this time will be reduced to one day after the highway is completed. Travel between the two points, which is growing steadily, will then be greatly increased. (Consul George A. Buckland, Acapulco, April 6.)

Burmese Motor-Vehicle Market Poor.

Cable from Consul Charles W. Moffitt, Rangoon, May 25.

Conditions in the Burmese motor-vehicle market are very poor at present, owing to the rainy season and to the tightness of money which has resulted from the present status of the rice market and general business conditions. Dealers believe that prices are not a factor in sales at the present time. Sales for each of the past four months have averaged 78 low and medium priced cars, 5 high-priced cars, and 6 trucks. It is estimated by local authorities that sales for some months to come will not average more than 52 low and medium priced cars, and none at all for trucks and high-priced cars. The market is not overstocked.

Additional information regarding automotive products appears in this issue under the following section:

Tariffs and trade regulations—Brazil: Conditions of temporary admission of tourists' automobiles.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

MEXICAN SHIPMENTS OF HIDES AND SKINS DECLINE.

Consul Harry L. Walsh, Nuevo Larede.

Nuevo Laredo has declined considerably in importance as an assembly and shipment center of Mexican hides and skins for the American market during the past few years. Total shipments of hides and skins from this point to the United States have declined from 7,961,826 pounds, with a value of $1,647,385, in 1916, to 460,732 pounds, with a value of $119,661, in 1921, and 304,769 pounds, with a value of $84,151, in 1922. Cattle hides and goatskins make up the bulk of this trade.

It should be noted, however, that the heavy movement of 1916 did not represent hides and skins originating only in the Nuevo Laredo district but included also shipments from the States of Nuevo Leon, Coahuila, Tamaulipas, and San Luis Potosi, which were routed through Nuevo Laredo on account of its advantageous position as a point for direct exports to the United States during this period when shipments from other ports were very uncertain owing to disturbed conditions in the country.

Other Factors Affecting Export Movement.

Two other factors directly responsible for the decline in this trade were a serious drop in market prices in the United States and elsewhere and the fact that the supply of hides in Mexico is not as plentiful as formerly. The falling off in the number of cattle in the country is the result of disturbed conditions in recent years, when difficulties of maintenance and the practical impossibility of transferring the animals to secure zones caused in some instances the slaughter of the cattle for their hides alone.

A heavy import movement of cattle began in October, 1921, and from that month until the end of 1922, the importation of American cattle through Nuevo Laredo averaged more than 2,000 head per month. The bulk of this movement was for slaughter, however, as only a small percentage of milch cows and animals for breeding purposes was included.

Hide and Leather Trade Notes.

Increased Leather Activity in Czechoslovakia.

Activity has been resumed in two tanning works in Czechoslovakia. Increased orders for exports are reported to have been received from England as well as from Austria and Poland. (Trade Commissioner H. Lawrence Groves, Prague, April 18.)

Belgian Leather Market Affected by Strikes.

The demand for leather in the Belgian market has been further limited on account of the strikes in the postal and railway services. Buyers seem disposed to defer purchases in any quantity until more favorable times. Stocks of leather have generally been pretty well reduced, and it is felt that the period of price concessions is very nearly at an end. (Le Cuir, Paris, May 23.)

Tanning Industry of Colombia.

The tanning industry in Colombia is still in the primitive stage and in only one factory in the Barranquilla consular district is there to be found anything approaching modernness in the manufacture of leather. There are two tanneries located in this city and their combined production amounts to 1,500 sole leather sides and 3,000 feet of splits for uppers per month. Practically all of this leather finds a market in the Barranquilla district, and only a negligible quantity is exported to Jamaica, Curacao, and Trinidad. (Vice Consul William A. Hickey, Barranquilla, May 18.)

Greek Tanners Propose Opening Tanning Plant.

The growth of the tanning industry in Greece makes it important to develop the local industry for the manufacture of tanning materials, for which the country is now dependent upon foreign countries. The tanning of leather by chemical processes, which was introduced into Greece only a few years ago, is steadily gaining ground and tends to replace the old method of tanning leather by means of natural products. It is announced that a group of consumers of tanning materials is investigating the situation with a view to the establishment of a chemical factory for tanning purposes. (C. E. Dickerson, jr., Athens, April 14.)

Leather Industry of Honduras.

The Honduran Government statistics show that 95 per cent of the leather imported into that country is manufactured in the United States. The value of the upper leather imported from the United States in 1920 amounted to $82,000 and in 1921 to $26,000. Goat and kid comprise the bulk of the importation. The Tegucigalpa district takes approximately 35 per cent of the leather imports, the principal consumers being two shoe shops located there. The larger consumers import directly, not through local commission merchants. There is a small tanning industry in the Tegucigalpa district and a very considerable amount of the heavy leathers used in the country are of domestic manufacture. Some high-grade leathers, especially alligator, are also produced locally. The imported leathers are usually of medium and cheap grades. (Consul Robert L. Keiser, Tegucigalpa, May 2.)

Additional information regarding hides and leather manufactures appears in this issue under the following section:

Tariffs and trade regulations—Poland: Unrestricted exportation of dressed rabbit and hare skins.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

FOREIGN CUSTOMERS ARE WORTH KEEPING.

"We are anxious to increase our export business and have at various times taken orders for export at less than we could sell the same articles in this country in order that we might keep our foreign customers, knowing that in the long run it would average up." This extract from a letter from one of the largest and most successful shippers of hardwoods in the United States speaks for itself and is typical of the better class of lumber exporters in this country. It is this kind of spirit which enables a concern to maintain its foreign trade. It may be added that the above-mentioned concern is said never to have had any disputes in foreign countries taken into court or settled by arbitration.

NORWEGIAN BOX-SHOOK EXPORTS.

Assistant Trade Commissioner H. Sorensen, Copenhagen, Denmark, May 1.

Under normal conditions large quantities of sawmill waste are imported into Norway, chiefly from Finland, to be converted into box shooks for export purposes, according to the Norwegian Trade and Shipping Gazette. The box-shook industry has reached a high degree of development in Norway and the country ranks among the large producers of this article in the world. It seemed at one time that the use of other materials than wood for the manufacture of boxes threatened to destroy the industry, but in spite of this the demand for wooden cases for all purposes shows a steady increase.

Most of the shooks in Norway are manufactured in Fredrikstad (the center of the industry), while large quantities are also made in and shipped from Christiania, Drammen, Trondhjem, Moss, and Namsos.

Statistics reveal that Great Britain has been the largest direct importer, while shooks in smaller quantities have been shipped to all parts of the world. It is stated that Mediterranean fruit shippers are taking inferior boxes from Yugoslavia, Rumania, France, and Portugal, although their business depends upon successful exporting. The most promising fields for Norwegian exports of box shooks are the South African and Australian markets, where the Norwegian product is well known and extensively used.

NORMAL REQUIREMENTS OF ITALY.

Trade Commissioner A. A. Osborne, Rome, May 5.

An article on the amount of rough lumber needed by Italy to satisfy its requirements, the amount that can be furnished from its own timber resources, and the quantity that must be imported, appeared recently in a local publication. Since conditions here are not yet settled, it is hard to give present normal requirements with any assurance, but before the war the requirements, importations, and amount obtained from the Italian forests might, in the course of a year, be taken to run as follows, according to Dr. Antonelli, the writer of the article:

Normal yearly lumber requirements of Italy.

	Domestic production.	Imports.	Consumption or requirements.
	Board feet.	*Board feet.*	*Board feet.*
Softwoods	212,000,000	1,272,000,000	1,484,000,000
Hardwoods	424,000,000	212,000,000	636,000,000
Total	636,000,000	1,484,000,000	2,120,000,000

Before the war Italy produced about 30 per cent of lumber it needed and had to obtain the remaining 70 per cent from abroad. The chief source of supply, Austria-Hungary, was cut off by the war, and, as a consequence, domestic lumber and wood from Allied or neutral countries had to be used to a larger extent. Since 1918, however, Austria and Yugoslavia have again become the chief countries from which Italy's lumber needs must be supplied, and, in view of proximity to Italy and relative exchange levels, it is hard to see how any other wood-producing regions of the world can displace them.

United Kingdom Buyers Hesitating.

Trade Commissioner Alexander V. Dye, London, May 22.

The import trade in lumber in the United Kingdom has been rather quiet recently. For some time telegraphic dispatches have been received and published in the daily papers in this country relative to what is called a building crisis in the United States, the purport of these dispatches being that many contracts for the erection of new buildings have been canceled, and generally speaking there is a wide cessation of building due to high prices for labor.

In practically all lines the import of lumber in the United Kingdom in April was less than in March. On the other hand, house building is increasing. Railway carriage construction is taking more lumber than usual, the demand in this respect being particularly strong for wagon oak. The demand is good both for Central American and African mahogany. The United States seems to have dropped entirely out of the ply-wood trade, as no imports of ply wood have taken place from there for some weeks. It is reported in the papers here that South Wales firms have acquired an area of about 100 square miles in the neighborhood of Indian Bay, Newfoundland, containing a considerable quantity of spruce. It is stated that the aim of the promoters of this enterprise is to supply timber to collieries in the United Kingdom.

CUT-OFFS.

Shanghai Market Firm.

The Shanghai lumber market is firm and stocks are light. (Trade Commissioner L. W. Hoyt, Shanghai, May 19.)

Lyons Fair Postponed.

The Lyons Fair, announced for September, at which an exposition of lumber was to take place, has been postponed to October 6 to 21, 1923. (Commercial Attaché Chester Lloyd Jones, Paris, May 18.)

Lumber Exhibit at Prague Sample Fair.

The lumber industry was represented by 121 exhibitors at the Prague Sample Fair, but owing to the general stagnation in this line not much business was done. (H. Lawrence Groves, Acting Commercial Attaché, Prague, April 18.)

Johannesburg Market Satisfactory.

The lumber trade is on a satisfactory basis. Prices are firm and an advance is expected. Stocks are nearly normal. General building and construction are especially active. (Trade Commissioner Perry J. Stevenson, Johannesburg, South Africa, June 1.)

Bristol Imports Increasing.

Unofficial but reliable figures show that imports of lumber from the United States at the port of Bristol, England, during the first four months of the present year (2,045,000 board feet) were nearly double the imports for the corresponding period of 1922 (1,050,000 feet). (Consul Robertson Honey, Bristol, May 17.)

Queen Charlotte Islands Lumber Production.

An increasing interest is being taken in the possibilities of the lumber resources of the Queen Charlotte Islands. A very considerable proportion of the logs scaled in March and April in northern British Columbia were cut on the islands, and from present indications it is expected that production will be heavy for several years. (Consul E. A. Wakefield, Prince Rupert, May 15.)

London Plywood Trade Tending to c. i. f. Basis.

All prices for ply wood are being firmly maintained, and with steady reduction of stocks. Although there is still a fair quantity of ply wood available, it is at last being generally realized that the opportunity for obtaining the extremely low-priced article has now passed, and that the market must eventually, if it has not already done so, stabilize itself on the basis of c. i. f. figures. (Vice Consul Charles L. De Vault, London, April 13.)

Demand for Philippine Woods.

The export demand for Philippine woods continues and the domestic consumption is unchanged. (Trade Commissioner John A. Fowler, Manila, May 24.)

The demand for Philippine lumber in London has dropped very considerably and the value is about 11 cents per foot. Some interest is being shown by the wagon makers in Philippine woods. (Vice Consul Charles L. De Vault, London, April 13.)

Progress of Afforestation in Shansi, China.

Shansi Province has a bureau of forestry with six branches. It is estimated that there are 182,700,000 mow (1 mow=0.15 acre) of vacant hill land which are expected to be afforested in the course of time. The total number of trees planted during the last f

years is reported to average about 100,000,000 a year. (Bulletin of the Chinese Government Bureau of Economic Information, April 14.)

Havre Lumber Trade.

Most of the lumber consumed in France at present is purchased from middle Europe, as the exchange makes such purchases profitable to French lumbermen. Cargoes from Canada were discharged during April, the first for the year. Increased activities of the Russian lumber trust are reported with a certain amount of their output destined for French ports. Trade in lumber of French origin has been growing larger for the past two months in spite of higher prices, reconstruction work in the devastated regions accounting for a considerable part of the orders. (Vice Consul Davis B. Levis, Havre, France, May 9.)

Germany Takes Most of Czecho-Slovak Exports.

Czecho-Slovak lumber exports continue to go preponderantly to Germany, which in the last four or five months has been taking from 75 per cent to 85 per cent of the total Czecho-Slovak lumber exports. In January, 1923, total lumber exports of all kinds amounted to 27,700 carloads (10 tons per car), valued at approximately $2,300,000; in February, 30,700 carloads, valued at $2,500,000; and in March, 29,900 carloads, valued at $2,600,000. Of these monthly shipments 22,400, 23,900, and 24,100 carloads in the respective months went to Germany, according to official Czecho-Slovak figures. The balance was taken almost entirely by Hungary. (Trade Commissioner H. L. Groves, Prague, May 5.)

Taiwan Lumber for Japan.

A party of officials and shrine keepers arrived on March 6 from Japan to investigate the forestry and lumbering industry of Taiwan. One of them stated that the demand in Japan for Arisan lumber will increase in the future. Taiwan lumber, however, must meet keen competition from American lumber in the Japan market. There is a large demand in Japan for Arisan "hinoki" for building shrines and temples and for construction in warships and ordinary houses. The market price of lumber in the island is practically controlled by the standard price of "hinoki." With the decline of prices of commodities, the Taiwan Government General have reduced the price of "hinoki" anywhere from 8 per cent to 13 per cent from March 1. (Translations from local press by Chuhei Matsuo, interpreter, Taihoku consulate.)

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

IMPORTANCE OF FOREIGN MARKETS TO THE PETROLEUM INDUSTRY.

The value of export markets in relieving the domestic situation is particularly evident at the present time in the petroleum industry. During periods of domestic business prosperity there is, in some lines of business, a tendency to neglect export trade, but when, as at present in the petroleum industry, the increase of production more than keeps pace with the larger domestic demand, the importance of foreign outlets becomes increasingly apparent. This tendency to regard export trade as an occasional convenience by which to relieve a temporary domestic situation is not as noticeable, however, in the petroleum industry as in many other lines of business, perhaps for the reason that this country has never yet experienced any considerable period of relative shortage in its supply of petroleum products. Because of the heavy production of crude oil in certain sections of the country, particularly California, and in view of improving business conditions in many foreign markets this would seem to be an opportune time for American oil companies to strengthen their foreign connections and establish new ones. The Department of Commerce, through its Petroleum Division and district and cooperative offices, and in cooperation with its representatives abroad, is prepared to render every assistance possible to American oil companies seeking to relieve the present surplus situation by intensified marketing activities abroad.

PETROLEUM PRODUCTION AND TRADE OF THE FAR EAST.

A. T. Coumbe, jr., Petroleum Division.

The group of far eastern countries, consisting of China, Dutch East Indies, British India, and Japan, is a most important market, both present and future, for American petroleum products. Considered collectively they received more than 16 per cent of the quantity and 13.6 per cent of the value of all the refined petroleum oils exported by the United States during 1922. In comparison the amounts credited to these nations for the fiscal year 1913–14, a normal commercial year, were 12.6 per cent of the quantity and 13.2 per cent of the value of the total American petroleum exports, exclusive of crude, residuum, and the solid products.

The exports of refined petroleum products from the United States to these far eastern countries during the years 1914, 1921, and 1922 are shown in the following table:

Distribution of petroleum products exported from the United States to Far Eastern countries.

Countries of destination.	1914[1]		1921		1922	
	Gallons.	Value.	Gallons.	Value.	Gallons.	Value.
China	87,734,117	$6,600,524	132,258,309	$18,423,738	180,736,186	$20,704,631
Hongkong	22,370,816	1,454,716	32,051,030	4,615,376	46,276,412	4,578,179
Dutch East Indies	21,345,448	2,045,027	11,223,450	3,159,506	8,088,315	1,373,180
India	41,009,794	3,725,639	48,748,649	8,204,803	78,944,302	6,451,090
Japan	99,494,573	5,472,077	41,510,370	6,141,862	89,359,663	9,885,974
Total	271,954,748	19,297,983	265,791,808	40,545,285	403,404,878	42,993,054

[1] Fiscal year ended June 30.

The figures for 1922 indicate a substantial gain, as compared with the pre-war imports, although there were intervening losses during the war and the period of adverse economic conditions that followed.

Import Statistics of Far Eastern Countries.

The volume of the import trade in petroleum products in the Far East may be judged from another angle, by consulting the following table, which shows the official customs returns of the respective countries. We find that they received over 461,000,000 gallons of refined mineral oils, valued at over $105,000,000, during 1921, the latest year for which complete statistics are available. In comparison with the 1914 totals of 410,000,000 gallons, valued at over $45,000,000, there is a growth in the imports under review of more than 12 per cent in quantity and 130 per cent in value, and this increase came about during the difficult commercial times of the last few years. Incidentally the American share of this business is just under 60 per cent from both a quantity and a value basis.

America's share of the imports of petroleum products into China, Dutch East Indies, India, and Japan.

[1] Figures not available. [2] Figures for fiscal year ending Mar. 31.

The population represented in these far eastern countries is over 800,000,000, or slightly more than half of the world's total inhabitants, yet the per capita consumption is only slightly more than 1 gallon of mineral oil products yearly, a very small amount compared to the per capita quantities used in the United States and other English-speaking countries. In other words, these Asiatic nations are the greatest potential field for future development by American oil exporters. Progress will be a question of intensive selling methods, and a determination on the part of oil company executives and field men to master every main factor, to understand every undercurrent and even every detail that affects these markets, so that competition from foreign petroleum groups may be met with all possible advantages.

Crude Petroleum Production.

There are several well developed oil fields in Japan, British India, and the Dutch East Indies, which have produced commercial quantities of petroleum for many years, and British Borneo has recently recorded its first million tons of crude produced since 1912. The amounts yielded in these fields are not large but the totals have been fairly constant over the last few years, totaling about 29,000,000 barrels annually, and making up 3.8 per cent and 3.4 per cent, respectively, of the world outputs for 1921 and 1922. The Dutch colonies are the principal sources of oil in the Far East with an annual yield of 16,000,000 to 17,000,000 barrels, and British India ranks second with an average of 8,000,000 barrels. Statistics for 1922 recently published by British as well as American authorities mention the British Borneo production as slightly under 3,000,000 barrels. The Japanese and Formosan fields give 2,000,000 to 2,500,000 barrels each year.

The petroleum geology of these eastern countries has not been as thoroughly studied as have parts of America and Europe, but a recent paper entitled "Petroleum Resources Tributary to the Pacific Basin," by Dr. David White, of the Geological Survey, read before the Pan Pacific Conference at Honolulu, estimates the petroleum reserves of eastern Asia and the Japanese Empire as 7,000,000,000 barrels. We must add to this amount 3,600,000,000 barrels, a conservative estimate for the Dutch East Indies. These figures give a total future supply of 10,600,000,000 barrels, or 17.6 per cent, of the world's petroleum still remaining in the ground, which approximates 60,000,000,000 barrels, as estimated by Dr. David White and Eugene Stebinger in a paper presented before the Engineering Congress on the petroleum industry at Kansas City, Mo., during March, 1922.

UNITED STATES IMPORTS OF PETROLEUM PRODUCTS FOR MARCH.

Our imports of liquid petroleum products for March, 1923, show a 28 per cent gain over the February receipts, but a loss of 33 per cent as compared with March, 1922. Crude petroleum, the chief item imported, amounted to about 85 per cent of the liquid petroleum products received during the month. Owing to the reclassification of products dating from September 22, 1922, the receipts of fuel oil, illuminating oil, and lubricating oil can not be compared with the amounts received in March a year ago, but all these products show a substantial gain over February of this year. Imports of gasoline, naphtha, and other light products increased by 115 per cent over February and 50 per cent over March, 1922. The quarterly totals through March are 1,132,076,105 gallons of crude and refined products as compared with 1,682,144,742 gallons received during the first quarter of last year.

United States imports of petroluem products.[1]

[1] Includes also illuminating and lubricating oils.

Petroleum Notes.

Polish Crude Oil Production.

Production of oil in the Boryslaw basin (representing about 60 per cent of Polish production) showed an apparent increase for March of 6,814 metric tons

March production figures were 39,685, as compared with 32,871 tons in February. (Vice Consul Donald R. Heath, Warsaw, April 24.)

Oil Concessionaires Active in Costa Rica.

Another oil company (International Oil & Pipe Line Co. of Tampico) has applied for a concession to explore for petroleum in the Atlantic Province of Limon, Costa Rica. The term of this concession, which has been approved by the Secretaria de Fomento and submitted to the Congress for final action, is to be for two years and contains the same general provisions as does the concession recently granted to an American company, which previous concession will have to lapse before the one now reported becomes effective. (Consul John James Meily, Port Limon, May 12.)

Importation of Petroleum Products Into Dunkirk, France.

The petroleum products imported into Dunkirk during the first quarter ending March 31, 1923, were as follows, according to its chamber of commerce: Refined mineral oils, 5,830 tons, 3,385 tons of which were from the United States and 2,300 tons from Rumania. The total gasoline received was 11,434 tons, 9,346 tons of this being from America and 2,067 tons from Mexico. The lubricating and other heavy oils imported were 10,568 tons, over 9,000 of which originated in America. In addition to the above products, receipts show 2,726 tons of residuum and 28 tons of paraffin wax. (Consul John S. Calvert, Dunkirk, May 8.)

Oil Mining in Germany.

The process of extracting oil by means of shafts or pits sunk to the oil sands is now being used in a field at Wietze near Hanover, Germany, according to the recent annual report of the Deutsche Erdoel Aktiensgesellschaft. The oil is obtained by means of a washing system applied after the sand has been brought to the surface. It is believed, according to the report, that this method, which was first used in the oil fields in Alsace, will considerably increase German production, and will offer new prospects to countries where oil has stopped gushing, although by no means exhausted. (Consul E. Verne Richardson, Berlin, April 24.)

Explorations for Oil in Bilbao District, Spain.

It appears that there are at present eight companies engaged in exploration for oil in the Bilbao district, according to information published by the official chamber of mines at Bilbao. The denouncements of these companies in the Spanish Basque Provinces alone of the Bilbao district cover many thousand acres of lands which have been favorably reported upon by the companies' geologists. A number of borings have been made which have given favorable indications, but no results of a definite character have as yet been achieved. One company of American affiliation and one of British origin are now drilling in the Provinces of Navarra and Logrono. A Spanish corporation which has received a subsidy from the Spanish Government of 128,930 pesetas will renew operations at an early date in the Province of Burgos. As Spain is now dependent on the outside world for its supply of petroleum and products, the operations of the oil-exploration companies are naturally watched with the greatest interest. (Consul H. M. Wolcott, Bilbao, May 1.)

Additional information regarding petroleum appears in this issue under the following sections:

Latin America:
Petroleum production in Ecuador.
New regulations relative to petroleum concessions in Panama.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

CONDITION OF CEREAL CROPS IN EUROPE.

Alfred P. Dennis, special representative of Department of Commerce, Berlin, May 31.

European areas sown to wheat show declines as compared with last season in Belgium, Czechoslovakia, Bulgaria, Rumania, and Austria. These losses are offset by notable increases. Wheat acreage in France increased by 1,130,000 acres, while the area under grain in Russia is reported as 159,000,000 acres, as compared with 135,000,000 acres last season and 213,000,000 acres before the war.

The acreage of land under cultivation in Turkish Anatolia is officially reported to be three times as much as last year. In Yugoslavia 30 per cent more land has been plowed this year than last. The total European acreage of all grains will not greatly exceed last season, but the crops promise a much better outturn. The unusually cold month of April was followed during the first 10 days of May by hot weather which, with plentiful subsoil moisture, favored rapid plant growth. In general, present crop conditions are above the June 1 average and decidedly better than a year ago.

In the judgment of the Liverpool Corn Trade News, the European cereal harvest of 1923 will fully offset any reduction in the outturn of the United States and Canada, maintaining last season's level of world production.

Danish Trade in Feeds and Pork Products.

Alfred P. Dennis, special representative of Department of Commerce, Berlin, May 31.

Imports of Russian sunflower and flax seed cake into Denmark have had an unfavorable effect on the American oil-cake trade with that country. For the first five months of 1923 these imports from Russia have amounted to between 40,000 and 50,000 metric tons. The price quoted for Russian oilseed cake is about $43 per metric ton, while American cake has dropped from $60 to $56 per metric ton. Imports of oil cake into Denmark follow the course of Danish butter exports, which are now back to the pre-war level. Danish imports of cottonseed cake from the United States declined from 158,000 metric tons in 1921 to 100,000 metric tons in 1922.

Imports of corn into Denmark follow the course of Danish bacon exports, which have now attained record proportions. Despite higher prices, Danish imports of corn from the United States were 210,000 metric tons in 1922, as compared with 280,000 metric tons in 1921. Slaughterings of hogs in Denmark during the

past five months have totaled 1,350,000. This figure exceeds the pre-war rate and is nearly equal to the slaughterings for the entire year in 1921. Bacon prices are well maintained and sales of Danish bacon in British markets are now equal in volume to American sales.

Sugar Situation in Europe.

Alfred P. Dennis, special representative of Department of Commerce, Berlin, June 6.

With the exception of Germany, all sugar-producing countries in Europe have substantially exceeded last season's acreage. Sugar-beet plantings are reported 11.5 per cent under last year in South Germany and 23.3 per cent lower in the Rhineland. Late reports confirm the estimate that beet acreage for all Germany is between 5 and 6 per cent lower than last year.

The deadlock between beet growers and sugar manufacturers in Sweden has been settled by conceding higher prices to the growers. The area planted to beets in Sweden will probably exceed that of last season by 200 per cent. The Swedish Government has suspended the sugar monopoly and price fixing, effective June 1.

The Rumanian Government has prohibited the export of beet root and its sugar derivatives. In Czechoslovakia, State regulation of sugar prices brought out hoarded stocks that had been withdrawn from consumption for a speculative rise. It is estimated that 60 per cent of the sugar released for consumption in April and May was not placed on the market. At present, stocks in Czechoslovakia are much heavier than had been supposed.

Consumption in the principal sugar-using countries of Europe since September 1, 1922, has been reported as 7.4 per cent higher than for the same period last year and 37.8 per cent higher than for the corresponding period of the sugar year 1920–21. The countries covered by this estimate are Germany, Czechoslovakia, France, Belgium, the Netherlands, and England.

Favorable Sugar Outlook in Argentina.

Assistant Trade Commissioner Clarence C. Brooks, Buenos Aires.

Official sources estimate that stocks of sugar together with the results of this year's grinding will provide a supply sufficient to meet the country's requirements up to December 31, 1923. The stocks, visible and invisible, were placed at 42,585,060 kilos on April 24, 1923. The season's grinding commenced in May.

During 1922 the total consumption of sugar was 257,704 metric tons, or approximately 21,500 metric tons per month. Should the 1923 grinding come up to expectations and yield about 250,000 metric tons, Argentina will not be forced to look to Brazil or the United States as a source of supply before January, 1924. Excellent weather and the increased sugar content of the Java cane, which has entirely replaced the native or "criollo" variety, are the two factors to which a larger yield can be attributed. There has been only a moderate increase in the acreage under cultivation.

During 1922, Argentina imported 29,310,300 kilos of refined sugar from Brazil, 22,845,186 kilos from the United States, 7,710,780 kilos from Uruguay, and lands. Argentina is both an importer and an exporter of sugar, according to the state of the market.

Production of Olives and Olive Oil in Spain.

Commercial Attaché Charles H. Cunningham, Madrid.

During the crop year 1922–23, the area devoted to olive culture in Spain was 1,613,186 hectares. Total production of olives was 15,395,510 quintals, an average of 9.54 quintals per hectare. Of the total production, 15,071,010 quintals were used in the manufacture of olive oil, yielding 2,891,140 quintals of oil, an average of 1.83 quintals of oil per hectare planted in olives. Average production of oil per 100 kilos of olives was 19.18 kilos.

The following table shows the production of olives and olive oil in Spain for the last five years.

Production of olives and olive oil in Spain.

Years.	Olives.	Olive oil.
	Quintals.	*Quintals.*
1918–19	14,038,314	2,552,023
1919–20	18,130,999	3,363,937
1920–21	16,623,845	3,169,637
1921–22	15,230,935	2,760,502
1922–23	15,395,510	2,891,140

Foreign Markets for Prepared Fruits and Vegetables.

Factors affecting the sale of American dried and dehydrated fruits and vegetables abroad are discussed in a survey recently completed by the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce based upon observations made in practically all world markets by representatives of the Departments of Commerce and State. The survey is in loose-leaf form, and up-to-date information is thus always available to the reader. Copies may be borrowed from any district or cooperative office of the Bureau of Foreign and Domestic Commerce, or directly from the Foodstuffs Division.

Rumanian Exporter Seeks American Connection.

A Rumanian firm exporting beans, peas, lentils, dried fruits and vegetables, and nuts desires to make connections with importers in the United States. Further information may be had by addressing the Foodstuffs Division or any district office of the Bureau of Foreign and Domestic Commerce. Refer to file No. 93722.

Cumin Seeds Offered by Malta Exporter.

An exporting firm at Malta wishes to get in touch with American importers who are in the market for cumin seeds. Further information may be obtained by application to the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce.

Notes on Food Products.

Sugar Statistics for Czechoslovakia, 1922–23.

Sugar production in Czechoslovakia from October 1, 1922, to May 1, 1923, amounted to 733,000 metric tons of raw sugar. Domestic consumption during this period was 227,000 metric tons and exports were 311,000

Swiss Cheese Exporter Desires American Agents.

A firm in Switzerland exporting Swiss cheese wishes to make agency connections in various parts of the United States. Interested agents may secure further information by addressing the Foodstuffs Division or any district office of the Bureau of Foreign and Domestic Commerce. Refer to file No. 94913.

German Hog Industry Slow to Recover.

While the hog industry in Denmark and Poland shows complete recovery, the number of hogs in Germany is approximately 1,000,000 less than it was a year ago and about 33 per cent below the pre-war figure. (Alfred P. Dennis, special representative of the Department of Commerce, Berlin, May 31.)

Use of Russian Grain in Finland.

Russian rye is underselling American wheat in Finland. Finland reports having taken 12,000 metric tons and Esthonia 8,000 metric tons since the beginning of the year 1923. Denmark also shows a tendency to shift to the use of Russian rye. (Alfred P. Dennis, special representative of the Department of Commerce, Berlin, May 31.)

Danish Dairies to be Established in Hungary.

A Danish dairy concern has obtained a concession from the Hungarian Government permitting the importation of Danish cattle and the establishment in Hungary of 40 dairies on the Danish system. It is understood that the entire output of butter and cheese will be exported. (Alfred P. Dennis, special representative of the Department of Commerce, Berlin, May 31.)

European Corn Imports Decline.

During the first six months of the current cereal year European imports of corn have shown a striking decline, amounting to a reduction of 26 per cent for all Europe as compared with the corresponding period last season. British imports of American corn for the first four months of the calendar year 1923 are only half as great as for the corresponding period of 1922. The trade fluctuation in corn indicates that its price is out of line with other grains, being relatively higher, and that cheapness is the controlling factor in the European demand for imported corn. The European import trade in wheat, rye, oats, and barley has come fairly up to expectations for the first half of the present cereal year. (Alfred P. Dennis, special representative of the Department of Commerce, Berlin, June 6.)

Peru—new live-stock quarantine regulations.
South Africa—beef export bounties bill passed.
United Kingdom—operation of new condensed-milk regulations postponed.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

RISE IN UNITED STATES PIG-IRON IMPORTS.

The United States imported 106,199 long tons of iron and steel products during March—a gain of 57 per cent over the previous month, although still considerably below the January total. Importation of pig iron, which had slumped in February, again became vigorous and there was improvement in the receipts of foreign scrap. Consignments of foreign iron and steel products which entered the United States during February, March, and the first quarter of 1923, were:

Imports of iron and steel into the United States in 1923.

Articles.	February.	March.	January-March.
	Tons.	*Tons.*	*Tons.*
Pig iron	35,793	72,344	192,072
Ferromanganese, manganese metal, and alloys	7,741	8,082	20,041
Ferrosilicon	1,494	949	3,345
Scrap	13,686	20,047	55,684
Steel ingots, blooms, billets, slabs, steel bars, etc.	2,058	1,150	5,248
Bar iron	85	119	874
Structural shapes	468	532	1,234
Rails and splice bars	1,827	838	4,414
Boiler and other plates	5	2	357
Sheets and saw plates	210	63	360
Tin plate	2,889	425	5,443
Round iron and steel wire	329	514	1,139
Wire rope and insulated wire, all kinds	27	151	304
Flat wire and strip steel	104	44	212
Wire rods	547	133	1,426
Tubular products	215	583	1,153
Nails and screws	31	132	261
Bolts, nuts, rivets, and washers	21	19	54
Castings and forgings	177	72	365

In addition to the above there were imported during March 33,096 square feet of card clothing, 166,626 tons of iron ore, and 12,799 tons of manganese ore and concentrates, as compared with 14,088 square feet of card clothing, 143,702 tons of iron ore, and 3,159 tons of manganese ore and concentrates in February.

Organization of the French Iron and Steel Industry.

Commercial Attaché Chester Lloyd Jones, Paris.

The disturbed conditions which have been brought to French iron and steel manufacture by the Ruhr developments have accentuated the disorganization in sales agencies which had come during the two previous years. The gradual dissolution of the series of comptoirs, which were formerly characteristic of French metallurgy, left the vertical organizations, which have developed in irregular degree to take their place, to face the strained conditions created for the industry at the beginning of 1923.

Obviously under existing conditions no sales organization could compensate for the disadvantages coming from interference with the source of supplies of raw materials. The vertical organizations have continued to be used and have had some recruits among firms not formerly associated with them. They have not had an opportunity to demonstrate what they can do in normal times to assure prosperity to the trade. The do-

occupation saw rapidly rising prices which minimized the importance of far-reaching sales organizations. Later, domestic prices have shown a tendency to fall and the selling organizations now existing, unlike the older comptoirs, do not work for stabilization of the market at what the manufacturers agree is a fair price. Thus, while prices rose as a result of local conditions, when the comptoirs were dissolving, they are now falling in spite of continued high manufacturing costs, and the new vertical selling organizations do not stop the decline.

While the conditions surrounding the market are so exceptional that the merits or demerits of sales organizations can not be held largely responsible for them, it is perhaps understandable that certain interests have shown dissatisfaction and have begun to discuss the possibility of the reorganization of the comptoirs. Negotiations are already under way looking toward the creation of a comptoir des tôles, and other plans are reported to be under discussion.

Iron and Steel Situation in Czechoslovakia.

Trade Commissioner H. Lawrence Groves, Prague, May 12.

Czecho-Slovak iron and steel prices now are based directly on British prices. Pig iron per ton, f. o. b. German frontiers, is selling at approximately 1,100 crowns ($33 at present exchange), which is almost identical with the price for British pig iron laid down in a German port.

At present all available excess of Czecho-Slovak pig iron and steel is going almost exclusively to Germany, shipments to that country amounting to about 40,000 tons a month. Recently the German Government placed two contracts with local firms for 4,000 tons of rails each. Practically all Czecho-Slovak mills are united in the Selling Association of the Combined Iron and Steel Mills, through which all sales take place, and payments are made to the respective mills on the basis of an average monthly price.

Of the 7 large blast furnaces at Witkovice, 5 are now in operation. The 3 large furnaces at Trinec are all working, and 3 of the 5 large furnaces at Kladno are in operation, making a total of 11 out of the 15 larger furnaces in the country. The 12 other furnaces are of much smaller capacity. It is estimated that the present rate of steel production is on the basis of approximately 900,000 tons annually, with pig iron on about the same basis. The country's normal producing capacity of steel is rated at approximately 1,500,000 tons, and the same figure applies to pig iron. In 1922 the steel production was somewhat over 500,000 tons. Local mills appear unwilling to start any more blast furnaces and increase their present production, owing to the uncertainty connected with the situation in the Ruhr, although the present demand would justify practically capacity production.

Situation in the French Steel Industry.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, June 8.

There have been complaints in French industrial circles that the supplies of coke during May were inferior to those of April, due partially to the strikes at to the order to hoard deliveries from the Ruhr. Trade publications state that reports of Ruhr shipments are received with skepticism. Conditions in the industry are unfavorable, even granting that the Ruhr deliveries will be sustained until August at the rate indicated by governmental reports, which the trade considers doubtful.

During April the Société des Consommateurs de Coke des Hauts-Fourneaux delivered to its members 112,000 tons of German coke, giving them 49 per cent of the amounts allotted to members, at the basic requirements price of 198 francs per ton. Shipments of Ruhr coke to the Société from May 1 to 24 amounted to 115,000 tons. The price set by the Société des Consommateurs de Coke des Hauts-Fourneaux will be lowered for June and July to 180 francs per ton for basic requirements and 250 francs for supplementary supplies.

On May 1 there were 88 blast furnaces operating, showing an improvement in the east and in Lorraine. Of these furnaces, 85 were ready to function and 46 were under construction or repair. French production of iron and steel in April was reported at 350,000 tons of pig iron and 350,000 tons of steel ingots and castings, as compared with 316,000 tons of pig iron and 315,000 tons of steel ingots and castings in March. Exports of pig iron, which totaled 202,000 tons during the first quarter of 1923, are showing declines. Offerings on the local market have been larger since March, yet supplies are insufficient for the normal demand. Buyers of steel are cautious, but the number of purchasers is increasing and a quick change in the market is possible.

German Iron and Steel Prices.

Based on cable from Commercial Attaché Charles E. Herring, Berlin, June 7.

Guiding German inland prices of pig iron, effective June 1, are: Hematite, 1,630,000 marks per metric ton; first-grade pig iron, 1,600,000 marks; third-grade pig iron, 1,597,000 marks; spiegeleisen, 8 to 10 per cent manganese, 1,754,000 marks; ferrosilicon, 1,310,000 marks. Inland prices on Siemens Martin steel half-fabricates, effective June 6, are: Ingots, 2,171,000 marks per metric ton; blooms, 2,440,000 marks; billets, 2,598,000 marks; sheet bars, 2,682,000 marks; shapes, 2,975,000 marks; merchant bars, 3,000,000 marks; hoops, 3,606,000 marks; wire rods, 3,197,000 marks; heavy plates, 3,394,000 marks; medium plates, 3,762,000 marks; and fine sheets, 4,606,000 marks. Thomas steel prices average slightly less. The maximum inland price on cement, effective June 4, is 330,000 marks per ton.

Austrian Steel Output for May.

Based on cable from Trade Commissioner William Ford Upson, Vienna, June 6.

The Alpine Montangesellschaft is now working four furnaces and is assured of a coke supply by foreign contracts. Its unfilled orders amount to 26,000 metric tons. Prices have been reduced on an average of 16 per cent to meet Czecho-Slovak and German competition. Production for May was 122,000 tons of iron ore, 35,000 tons of pig iron, 36,000 tons of ingots, and 27,000

Opportunity to Purchase South African Scrap.

A cable received from Trade Commissioner Perry J. Stevenson, Johannesburg, states that a merchant of that city is offering 5,000 to 7,000 tons of railway scrap at $25 per long ton, c. i. f. New York or Philadelphia; terms 90 per cent against documents. Interested American firms may obtain the name and cable address of the merchant upon inquiry to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of file No. 9518.

Opportunity to Purchase Indian Manganese Ore.

Consul T. M. Wilson, Bombay, India, reports that an Indian firm desires to get in touch with reliable buyers of manganese ore in America. Previously this company has made all of its sales of manganese ore through its Milan branch for the Italian market, but it has now acquired some additional mines and wishes to extend its business to the United States. Interested American firms may obtain further information concerning this opportunity upon request to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of file No. 94497.

Additional information regarding minerals and metals appears in this issue under the following section:

Cable review, western Europe: French metallurgical production improving.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

CONDITIONS IN THE SWISS AUTOMOBILE TIRE MARKET.

Consul Lewis W. Haskell, Geneva, April 9.

The market in Geneva and the surrounding territory, comprising the French-speaking part of Switzerland, is served by branch houses or general agencies of several of the largest European and American tire manufacturers. The Michelin is far in the lead in sales, followed by the Continental, French Goodrich, Bergougnan, Englebert, Pirelli, and Palmer, in the order of importance. These makes are well established and, with a sales organization which gives them an agency devoted exclusively to their interests, they naturally have the advantage over any exporter who sells through general importing houses or directly to retail dealers. Very little direct business is transacted as there are no large automobile supply jobbers and the orders from garages and tire dealers are too small to warrant buying individually from the United States.

Size of the Market.

All tires used in Switzerland are imported, but as custom statistics do not segregate completely the various classes of rubber goods, exact quantities can not be determined. The size of the Swiss market can best be estimated from the number of motor vehicles in use, which a leading automobile journal gave on December 31, 1922, as 16,723 passenger cars, 5,202 industrial trucks, and 9,630 motor cycles.

Some Objections to Handling American Tires.

Some of the difficulties which a local dealer sees to handling American tires, especially of a make unknown in Switzerland, may be summed up as follows: (1) He lacks the advertising and guaranty possibilities which branch houses and general agents of strong competitors possess, because he does not have the manufacturer directly back of him. (2) To carry on a first-class business he must carry a fair stock of tires of all sizes, but if he fails to dispose of this stock within a reasonable time its value is impaired and thereby he sustains a loss. It is understood that the Michelin Co. does not allow its local house to keep old stock on hand; if tires are unsold for a certain length of time they are sent back to the factory and replaced by fresh ones. (3) Market prices are set by the large companies, which meet each other's competition. If a small dealer handling a new line has to meet price cuts of agents of competing makes he loses money; if he fails to do this he loses business. These are some of the reasons why retail tire dealers prefer to handle tires which they can get in small quantities from general depots or agencies of established makes rather than to risk introducing a new line, even though the prices of the latter may offer some attraction.

Exclusive Agency Best Method of Entering Market.

The natural conclusion is that competition with the companies already in the field could best be conducted through an exclusive agency which could push the line of tires handled by active advertising and with full backing from the manufacturers. The general agents and branch houses sell to retail dealers on a 10 per cent discount basis, an additional discount being sometimes allowed in case yearly purchases reach a certain figure. Several of the houses do not engage in retail business at all; others sell directly to the public as well as to tire dealers. Retailers occasionally allow customers a small discount from the list price.

The customs duty is an inconsiderable factor in figuring the cost of delivering American tires in Switzerland. The rate on rubber tires, according to item 521 of the present tariff, is 10 francs per quintal, equivalent to about $0.85 per 100 pounds at the current rate of exchange. The rate on pneumatic rubber tires, casings, and tubes, item 522, is 20 francs per quintal.

Tire Price Increase Expected in South Africa.

Consul Charles J. Pisar, Cape Town, May 1.

American and English tire manufacturers generally are maintaining in South Africa a differential of about 10 per cent between their prices and Michelin, although some firms have met the Michelin price cuts. It is an-

ticipated that all prices will be increased in the near future as a result of the change in levying the customs duty. Under the new method the duty will be greatly increased; the former average duty per tire was 8 shillings, and under the new rating it is about 14 shillings. Stocks of tires are large and there has been a constant introduction of new makes selling at competitive prices. Of the eight leading makes of tires in this city, five are American, as compared with four last September. These makes hold second, fourth, fifth, sixth, and seventh positions. Of six other brands on the market, three are American, as compared with three brands (one American) last September. The Dunlop is the best selling tire, and Michelin now holds third place.

Rubber Trade Notes.

Market for Canvas Rubber-Soled Footwear in Burma.

Canvas rubber-soled shoes are used extensively in Burma. They are generally sold in the department stores of Rangoon, which are visited at least once a year by traveling salesmen from several firms selling to such stores. (Consul J. P. Moffitt, Rangoon.)

Auckland An Automotive Center in New Zealand.

There are about 10,000 automobiles in the city of Auckland, New Zealand, producing a good market for tires and accessories. American manufacturers are well represented, and American products are largely used in the automobile trade. (Consul K. deG. MacVitty, Auckland.)

Tire Price Changes in Philippines.

Tire prices have been changed by one company in the Philippines; the new prices for cord tires in the principal sizes being: 30 x 3½ clincher, 23 pesos; 32 x 3½ straight side, 32; 33 x 4, 40; 35 x 5, 64. No changes have been made by other makes in the market. (Cable from Trade Commissioner John A. Fowler, Manila, May 24.)

Michelin Tire Prices in Poland.

Retail list prices for Michelin tires in Poland are quoted in French francs as follows: 820 x 120, 348; 880 x 120, 385; 815 x 105, 261; 895 x 135, 522; 935 x 135, 551; 30 x 3½, 211. Wholesalers are getting from 20 to 25 per cent discount c. i. f. Danzig. Retailers receive a discount of about 15 per cent from above prices. (Acting Commercial Attaché H. B. Smith, Warsaw, April 25.)

Canadian Tires Popular in British Guiana.

The Canadian Goodyear and Dominion tires and four American makes are sold in British Guiana. Sales of American-made tires are falling off while Canadian tire sales are increasing because of the preferential customs duty accorded to British Empire products. The present general tariff on tires is 33⅓ per cent ad valorem, and the preferential rate is only 16⅔ per cent ad valorem. (Consul Chester W. Davis, Georgetown, May 10.)

South African Motor Traders Association Considering New Tire Trade Regulations.

There is a unanimous desire on the part of the tire firms and motor traders in South Africa to get the tire trade placed on a satisfactory basis, and as the clearance stocks of fabric tires accumulated in 1920 and 1921 are largely liquidated, it should be possible to put into effect regulations that will secure for the dealers legitimate profits on tires. Suggestions to this end will be taken up by the Motor Traders' Association during 1923. (Consul G. K. Donald, Johannesburg, May 2.)

COAL

ITALY'S COAL IMPORT TRADE.

Commercial Attaché H. C. MacLean, Rome, May 3.

On account of its entire lack of mineral fuels other than lignite, the use of which is decidedly limited, Italy's coal consumption corresponds with its imports, which, prior to the war, averaged about 10,000,000 tons per annum, the maximum having been reached in 1913 with 10,834,000 tons. As a result of the depreciation of the lira since the war and the effects of the industrial crisis, which were especially severe in the iron and steel industry where the consumption of coal is greatest, a marked decline is shown, imports in 1920 having been only 5,620,000 tons. However, conditions have been gradually improving and the consumption of coal has been increasing so that in 1922 imports slightly exceeded 9,000,000 tons.

Great Britain has always occupied a dominant position in the Italian coal trade, although since 1920 German reparation coal has been coming in, and in 1920 and 1921 the United States became a factor of some importance in the Italian market. The following table shows official import statistics compiled by the Ministry of Finance for the years 1914 and 1920, 1921, and 1922, and figures compiled by the Ministry of Marine for the first quarter of 1923:

Imports of coal into Italy.

Year.	Total.	United States.	Great Britain.	Germany.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1914	9,758,877	291,644	8,435,121	836,987
1920	5,619,978	1,461,502	3,035,183	987,006
1921	6,380,729	1,383,781	3,747,932	2,563,226
1922	9,135,747	128,443	5,774,365	2,735,142
1923, first quarter	2,385,554	13,164	2,006,089	530,657

Reparations Deliveries Supply State Railways.

For the past two years Italy has been receiving slightly more than 200,000 tons of coal from Germany per month for account of reparations. This coal, however, has been used almost exclusively by the State railways, only small quantities of it having reached private hands. Consequently, it has not constituted a competitive element. The coal consumption of the railways has recently been at the rate of 250,000 tons per month, so that it may be assumed that up to this amount German reparation coal can be absorbed by the

railways and that only in the improbable event that shipments exceed 250,000 tons will it affect private purchases or become a factor in determining prices.

The occupation of the Ruhr immediately affected shipments of German coal to Italy, and although the January figure, 191,000 tons, shows only a small decline as compared with previous months, in February the quantity was reduced to approximately one-half of normal receipts, being 105,000 tons. In March, however, regular shipments were apparently resumed and deliveries of 234,000 tons are reported, which is the highest total since October and is in excess of the monthly average for the year 1922. It seems reasonable to assume that unless something unforeseen occurs Italy will suffer very little from the Ruhr situation so far as coal receipts are concerned.

Increasing Prices Stimulate Buying.

The principal factor in the coal trade has been the increase in prices. First quality Cardiff coal which in the middle of January was quoted at Milan, one of Italy's principal industrial centers, at 225 lire per ton, had risen to 275 lire (the present value of the lire is approximately 5 cents) by the end of March, and higher fuel means increased production costs.

The uncertainty resulting from the occupation of the Ruhr stimulated Italy to make heavy purchases of coal in order to insure adequate supplies. At the end of January the State railways made contracts in Great Britain for 800,000 tons at 27s. 6d. (about $6.35) per ton, which, in view of the rise that took place during February and March, was a very favorable figure, and heavy purchases were also made by private interests. Some orders were placed in the United States, but it appears that most of the business went to Great Britain. Imports of British coal during the month of March were 798,000 tons as compared with 667,000 tons in February and 541,000 tons in January, the former figure being the largest quantity recorded for any month since the war. During 1922, imports of British coal averaged only 530,000 tons per month. From January 1 to March 31 of this year total imports of American coal were only 13,000 tons.

If anything, it appears that, in order to be on the safe side, Italy bought too much coal, for prices have recently been declining in the local market and the available tonnage exceeds the demand. It is said that the cost of British coal in Italy, after deducting transportation charges, is lower at the present time than in Great Britain. British Admiralty coal, which in March was quoted at about 250 lire per ton f. o. b. cars Genoa, is now selling at 220 to 225 lire. American gas coal, which up to the end of March was selling at about 230 lire per ton, has declined to 210 lire. Practically no high-grade British gas coal has been available on the Italian market, and American exporters have been able to take advantage of this situation.

Prospects for Sale of American Coal.

Owing to the disadvantage in the matter of transportation costs, American coal exporters have been able to compete with Great Britain in the Italian market only when conditions were abnormal. This disadvantage is especially marked in the cost of transportation from the mines to tidewater, which is materially less in England than in the United States, while, in addition, ocean freight rates from the United States, even at their lowest point, have been approximately 50 cents per ton higher than from Great Britain. The British coal trade in Italy is so firmly established that on an equal basis British coal will be bought in preference to American, and it is only where an advantage in price can be offered that American exporters are able to compete. In order to increase this trade the most liberal terms possible should be offered and the business should be facilitated in every way. The price situation still seems to be slightly in favor of American coal, but it is impossible to look ahead and say what conditions will be, even in the near future.

COAL SITUATION IN CHILE.

Assistant Trade Commissioner W. E. Embry, April 24.

An interesting review of the Chilean coal situation—one of the more important economic problems disturbing the country at the present time—which appeared in a recent copy of the South Pacific Mail, a British paper published weekly in Valparaiso, contained the following statistical information, showing to what extent the consumption of coal has fallen off in this country during the past seven years:

Comparative statement of importation of coal and petroleum into Chile covering periods of 1909–1915 and 1916–1922, together with production of Chilean coal.

Year.	Production of Chilean coal.	Importation of foreign coal.	Total.	Importation of petroleum.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1909	898,971	1,153,993	2,052,964	100,409
1910	1,074,174	1,293,140	2,367,314	116,708
1911	1,188,058	1,294,118	2,482,171	134,086
1912	1,334,407	1,428,181	2,762,588	230,846
1913	1,283,450	1,217,840	2,501,290	402,349
1914	1,086,946	877,650	1,964,596	509,860
1915	1,171,564	246,996	1,418,560	389,085
Total	8,087,565	7,511,918	15,549,483	1,883,323
Yearly average	1,148,223	1,073,131	2,221,354	261,903
1916	1,419,119	407,708	1,825,827	112,176
1917	1,539,314	406,667	1,945,981	760,912
1918	1,516,524	320,219	1,836,743	780,039
1919	1,486,491	203,057	1,688,548	507,442
1920	1,063,185	364,948	1,428,133	638,088
1921	1,275,117	493,043	1,768,160	541,837
1922	1,046,378	202,351	1,248,729	722,531
Total	9,344,128	2,397,993	11,742,121	4,123,025
Yearly average	1,334,875	342,570	1,677,446	589,003

The production of native coal shows an average yearly increase of over 185,000 tons during the past seven years as compared with the preceding seven-year period, while the imports of coal decreased by more than two-thirds. This increase in production of Chilean coal is even more striking in view of the fact that in the first period under review, which was prior to the opening of the Panama Canal, the native collieries had a very extensive business in the bunkering of ocean-going steamers. This trade is now entirely lost, as all steamers trading between North and Central American Pacific ports to Atlantic and European ports use the canal route. It has also seriously affected the quantity of Chilean coal taken for bunker purposes by steamers coming to this coast to load nitrate. The introduction of petroleum, which is still mainly used in the nitrate oficinas, has only proved detrimental to the coal importers, as the importations of coal clearly show.

Germany's Brown-Coal Resources.

Assistant Trade Commissioner William T. Daugherty, Berlin, May 7.

Germany apparently occupies first place among European nations in relation to its underground reserves of brown coal or lignite, despite territorial losses resulting from the war. Germany's deposits of brown coal are estimated at 13,400,000,000 tons in a recent official publication of the German Federal statistical office, while 20,000,000,000 tons is also cited as a possible reserve. Czechoslovakia is second with resources estimated at 12,500,000,000 tons and Russia third with 12,100,000,000 tons. Total European reserves of brown coal are estimated at 46,600,000,000 tons. These estimates are, of course, open to argument, but they give a relative idea of the brown-coal resources of Europe.

The calorific or heat value of German raw brown coal, which is the essential consideration in measuring its value for fuel and its limitations for use by industry, averages from 2,200 to 2,500 calories. The best brown coal being mined in Germany at the present time ranges in calorific value from 2,800 to 3,000. German raw brown coal at its best is inferior to Bohemian brown coal, which averages from 5,000 to 5,400 calories.

Additional information regarding coal appears in this issue under the following section:

Cable review, western Europe: French coal situation.

PAPER

John Matthews, jr., Chief, Paper Division

FINLAND'S PAPER AND PULP INDUSTRIES IN 1922.

Consul Leslie A. Davis, Helsingfors, April 21.

The Finnish paper industry has developed favorably since the war, and although the demand for paper throughout the world has not yet reached normal, Finnish paper has in general found good markets and until recently has brought satisfactory prices.

From a sales standpoint, 1922 was a favorable year in the Finnish paper industry, in that the supply of orders was good at all times and was fairly well distributed among the different months, thus providing the mills with continuous work and allowing shipments to be made without the seasonal accumulation for the fall months, which characterized 1921. Exportation, however, was handicapped during the first quarter by the severe ice conditions, not only in the Gulf of Finland and the Baltic Sea, but also in the sound and Kiel Canal, and as most of the exports went through the Hango, railway traffic to that port became congested.

The most serious difficulty with which the industry had to contend was the steady fall in prices, which continued through 1922 and which was particularly noticeable in the better qualities of paper. At the same time the Finnish mark has improved to such an extent that the decrease in prices of certain kinds of paper has been as much as 30 per cent. As a decrease in cost of production and wages is considered impossible, the situation is becoming difficult for the paper industry, and the question of partial suspension of work in some mills has been under serious consideration.

Conditions in Finland's Principal Markets.

Sales to England last year were made difficult by the tendency there to reduce the imports of finished goods and to increase those of raw materials in order to relieve the existing unemployment.

On the other hand, although exports of wrapping paper and of the finer qualities of paper to the United States appear to have been affected by the new customs duties, and competition from Canada is reported to be felt to an increasing degree, the United States has become an important factor in the Finnish paper market, since the principal classes of paper shipped there are not affected by the new tariff.

A trade agreement has also been entered into with France, which will tend to increase exports to that country, although exports are now somewhat handicapped by the present uncertainty of the franc.

The year 1922 witnessed a notable growth in the exports of newsprint to the Netherlands, nearly one-half of that country's imports of print paper during the past year coming from Finland.

Comparatively favorable markets for Finnish paper exist in Argentina, Brazil, Japan, China, and India.

Production and Sales Increase.

Production of paper in Finland during 1922 reached a new high level, amounting to 209,210 tons, as compared with 167,600 tons in 1913 and 160,518 tons in 1920. Sales are given as 210,927 tons, or slightly more than the year's production, of which about 11 per cent was for domestic consumption. The Finska Pappersbruksforeningen (Finnish Paper Mills Association), which is the selling organization of the Finnish paper industries, reports an output of 141,465 metric tons and an export of 128,633 tons by the 23 mills composing the association. This is slightly better than in 1921, when production amounted to 140,872 tons (including 46,750 tons by the Kymmene mills which have since withdrawn from the association), and exports to 128,879 tons. The withdrawal of the Kymmene Aktiebolag early in 1922 naturally caused a heavy decrease in the association's exports, especially of newsprint and the wood-free papers, but this loss was compensated by the installation of new machinery in several of the mills.

The production of the Kymmene Aktiebolag in 1922 amounted to 64,093 metric tons, and its exports to 55,628 tons, of which 27,506 tons went to England and 15,855 tons to the United States. The Finnish Paper Office, which handles the domestic sales of most of the paper mills and also their sales to Russia and the Border States, reports that its exports to these countries last year reached 17,000 tons.

Exports of Finnish Paper.

The increase in exports of paper is caused by the larger demand for newsprint, shipments of other kinds of paper being less than in 1913. Production of newsprint now reaches 68 to 70 per cent of the total paper output, and 1922 opened with a satisfactory demand for this product from several European and transoceanic countries, the situation being further improved by the tendency toward rising prices in the Netherlands and France. The sales of newsprint by countries in 1921 and 1922 and the percentages sold to the different countries through the association are shown in the following table:

Newsprint Sales by the Finnish Paper Mills Association.

Destination.	1921 [1]		1922	
	Metric tons.	Per cent.	Metric tons.	Per cent.
England	16,535	28.6	20,884	26.0
France	5,665	9.8	10,411	13.0
Netherlands	4,898	8.5	3,353	4.2
Denmark	3,101	5.4	1,336	1.6
Sweden	1,303	2.3	2,227	2.8
United States	6,560	11.3	21,461	26.7
South America	17,192	29.7	17,235	21.5
Others	2,528	4.4	3,246	4.2
Total	57,782	100.0	80,253	100.0

[1] Exclusive of product from Kymmene mills.

Exports of newsprint by the association in 1922 amounted to 72,326 metric tons, or 63 per cent of the total paper exports, while in 1921 newsprint exports, including the product from the Kymmene mills, amounted to only 98,704 tons, or 71 per cent of the total paper shipments.

Increased Sales of Wrapping Paper.

The improvement shown in the wrapping-paper market at the end of 1921 continued to some extent in 1922, and orders were quite uniform throughout the year, averaging 2,000 tons per month. The sales of the wrapping-paper section of the Finnish Paper Mill Association in 1922 amounted to 25,010 tons, compared with 18,882 tons in 1921. Exports of this paper to England decreased, amounting to 44 per cent of the total exports, but those to trans-Atlantic countries increased. Eight per cent of the exports went to the United States. The trade agreement between Finland and France, signed in 1921, greatly promoted exports to the latter country, and sales to Constantinople increased likewise by nearly 100 per cent.

Exports of Various Classes of Paper.

Exports of the various classes of paper from Finland during 1921 and 1922 were as follows:

Total exports of paper from Finland.

Kinds.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Wrapping paper:				
Brown	9,249	$816,462	16,208	$1,288,124
Other	8,279	898,661	14,410	1,489,362
Parchment paper	1,315	208,802	1,453	195,168
Newsprint	93,896	8,573,150	130,083	10,405,611
Other print	6,482	886,383	11,359	1,506,676
Wall paper	91	10,646	486	45,547
Draft paper	3,635	307,085	2,281	238,099
Letter paper	38	6,136	182	29,194
Tissue paper	552	129,882	500	217,501
Cigarette paper	317	155,605	461	379,629
Other kinds	4,387	572,273	14,718	1,646,199
Total	128,241	12,565,085	192,141	17,441,110

Increased Production of Mechanical Pulp and Cardboard.

The Finnish Pulp Mill Union states that the production of mechanical pulp last year from the 18 mills comprising the union was 56,681 metric tons, air-dry weight, and that of wood-pulp boards (cardboard) 33,342 tons—a total production of 89,923 tons. This figure, however, does not include about 90,000 tons of wood pulp used by the paper mills belonging to the same companies that compose the union, and which, in view of the increased production of paper last year, used more than in previous years. The remainder of the wood pulp produced last year was from mills outside of the union. Sales of mechanical pulp by the union to other mills in Finland last year amounted to 13,574 tons, or about the same as in 1920 and 1921, and exports reached 39,279 tons, leaving 3,828 tons on hand January 1, 1923. Exports of mechanical pulp by the union according to destination were as follows: France, 14,077 metric tons; England, 6,395 tons; Esthonia, 5,148 tons; United States, 4,872 tons; Belgium, 3,155 tons; South America, 2,040 tons; Germany, 1,866 tons; and other countries, 1,726 tons. England was the best market for Finnish cardboard, 9,040 metric tons, or nearly one-half, going to that country, while the United States took 3,492 tons and South America 3,173 tons. The remainder was scattered among the neighboring countries, averaging in the majority of cases around 1,000 tons. Exports amounting to 2,416 tons were also made to Egypt and Asia Minor.

The total mechanical-pulp exports from all mills during 1922 amounted to 59,422 metric tons, of which 43,612 tons represented dry pulp. Exports of cardboard amounted to 24,690 tons.

Gain in Production and Exportation of Chemical Wood Pulp.

Practically all the cellulose produced in Finland comes from the mills belonging to the Finnish Cellulose Association. The total production of sulphite cellulose by the association mills last year amounted to 204,499 tons, dry weight—a gain over both 1920 and 1921, when the output reached 121,555 tons and 140,039 tons, respectively. The production of sulphate pulp in 1922 amounted to 49,510 tons, as compared with 33,942 tons in 1921 and 43,182 tons in 1920. The rapid growth of this branch of Finnish industry is apparent when it is recalled that sulphite production by mills belonging to the association in 1918 amounted to only 19,944 metric tons and sulphate to 2,328 metric tons. Exports of cellulose by the association last year amounted to 177,668 metric tons, of which 128,049 tons consisted of sulphite and 49,619 tons of sulphate. The chief countries of destination and the amount shipped each country were as follows:

Exports of chemical wood pulp by the Finnish Cellulose Association.

Kind.	Total exports.	Exports to—					
		United States.	England.	Germany.	France.	Belgium.	South America.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
Sulphite:							
Bleached	13,471	3,111	1,702	1,363	1,473	3,222	330
Easy bleaching	35,413	6,993	16,508	2,704	1,578	4,749	.....
Strong	79,165	22,971	22,256	2,752	9,656	11,418	2,432
Sulphate:							
Easy bleaching	14,505	603	7,553	3,973	322	992	.....
Strong	35,114	18,000	643	8,437	2,333	1,209	601
Total	177,668	51,678	48,662	19,729	15,362	21,590	3,363

The total exports of cellulose from Finland by all mills, according to figures now available, amounted to 189,708 metric tons in 1922, of which sum 130,823 tons represented sulphite and 58,885 tons sulphate. Shipments for the years 1913, 1920, and 1921 amounted to 77,066 tons, 92,635 tons, and 127,058 tons, respectively.

Side Runs of the Paper Trade.

Gain Made by United States' Paper Exports in Lima Market.

American paper recovered strongly in the Lima market during March. Arrivals during February were chiefly from German exporters, acting as agents for Norwegian and Swedish mills, the American shipments amounting to only 278 cases out of a total importation of 2,326 cases. During March, in a quieter market, 720 cases came from the United States, 691 from Germany, and 29 from England, the total imports amounting to 1,440 cases. (Consul C. E. Guyant, Callao-Lima, Peru, April 2.)

Egyptian Paper Imports.

Imports of cardboard and wrapping paper, cigarette paper, writing and printing paper, including newsprint, into Egypt during 1922 were valued at $2,700,000, as compared with $3,000,000 in 1921 and $2,000,000 in 1913. The share of the United States in the foregoing imports was insignificant, apparently due to the impossibility of American manufacturers competing in price. Egypt annually uses about 500 tons of foreign-made cigarette paper. (Consul Lester Maynard, Alexandria, March 2.)

Regulations Governing Subvention of German Press Modified.

Regulations governing the subvention of the German press in an order dated March 22 were extended to include official trade journals and publications of economic unions and communal organizations, provided that they can prove that the cost of production is not practically covered by the proceeds from advertisements or other revenue. Furthermore, the term "papers of a political character" has been extended to take in religious Sunday papers when they pay the same price for printing paper as daily papers, and provided that they reported political news prior to October 1, 1922. (Consul General William Coffin, Berlin, April 11.)

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

SMALL FARM TOOLS USED IN BRITISH EAST AFRICA.

Vice Consul Oscar Thomason, Nairobi.

The market for small farm tools in British East Africa is important because most of the farming is done by natives, who have not yet become accustomed to the use of the plow and other implements, but still prefer the simple tools to which they have always been accustomed. The native population of Kenya, Uganda, Tanganyika, and Zanzibar is approximately 10,000,000, and 75 per cent of this number is engaged in farming. It can, therefore, readily be seen that by catering to the tastes and prejudices of the natives as regards the tools with which they work a considerable market can be opened up for the more simple farm tools.

The panga (machete), jembie (hoe), and the stoka (ax) are the tools on which the native depends for practically all the work that he does. He has not yet learned to use the plow. In 1921 the imports of these tools amounted to $300,000. The amount of these imports has been kept down because of the fact that little or no attempt is made to conform to the preferences of the native with regard to the shape or size of the tool. For example, the native has been compelled to use hoes and axes averaging 5 pounds in weight, while he prefers them at about 3 pounds. In these tools, an oval eye for the handle is preferred to a round one, and a hoe with a round or heart-shaped point is more popular than a square one. The oval eye gives rigidity on the handle, while the round or heart-shaped point makes an easier cutting edge.

The most popular tool and the one which the native uses for practically all purposes is the panga or machete. With this he digs and cultivates his garden, harvests his grain, builds his house, makes his furniture, and, when necessary, uses it as a weapon of offense and defense. These pangas are similar in size, weight, and shape to the machetes which are used in Cuba and in Central America.

Agricultural implements such as plows, harrows, reapers, and binders are used to a limited extent in British East Africa, and their use is slowly increasing. There is, of course, a constant limited market for such implements among the white settlers. At present there are large stocks on hand as a result of the large importations following the close of the war when it was thought that large numbers of former soldiers would settle in East Africa. This immigration did not materialize to the extent that was anticipated, and many of the former soldiers who did take up land were unsuccessful. This resulted in many implements being thrown back on the market, which had been sold at auction at very low prices, and in addition there are large stocks of new, unsold goods on hand. For the smaller tools, however, there is always a good demand, as they are the farming tools of the native both on his own farm and in his work for the white settlers.

IMPLEMENT AND TRACTOR NOTES.

Small Demand for Windmills in Belgium.

Windmills were formerly used very extensively in Belgium, but recently their use has decreased greatly. This is indicated by the fact that since the war not a single claim for the reconstruction of a windmill has been received by the War Damage Court in Ghent. This decline in the use of windmills is caused largely by the fact that there is little wind in Belgium during the summer months, when there is most need for their use, and in the winter, when there is little need for them, there is considerable wind. Several of the leading Belgian dealers in windmills confirm this in-

formation, and one of these firms has a windmill of American origin in stock which it would be glad to sell on any terms. (Acting Commercial Attaché S. H. Cross, Brussels, May 2.)

Hand Corn Mills Sold in Dominican Republic.

The demand for hand corn mills in the rural districts of the Dominican Republic is quite large. A small inexpensive mill is the type that sells most readily, as the people who purchase mills are unable to buy high-priced articles. Tinned mills are preferred to the painted ones, as the former are regarded as more durable in the Dominican climate. (Consul Charles Bridgham Hosmer, Santo Domingo, April 14.)

Brazilian Implement Market Weak.

The market for agricultural implements in Brazil at the end of May was weak, due to the refusal of farmers to buy at the present rate of exchange. The usual period of greatest activity in this line is from May to October. Business improved only slightly during the month and dealers are hoping, although with no great degree of optimism, that exchange will not prohibit a satisfactory season. (Commercial Attaché Wm. L. Schurz, Rio de Janeiro.)

Possible Market for Spraying Apparatus in Australia.

An experimental field of cotton in Queensland, Australia, at Burrinbar has been completely destroyed by pumpkin beetles, which devoured the soft green foliage and butts of the stems that began to wither when the plant had reached a height of 15 to 18 inches. While this adds a new problem to those attending the development of Australia as a cotton-growing country, it may possibly open up a market for sprays and spraying apparatus.

Need for Implement Demonstrations in Aden, Arabia.

Marked interest in American agricultural implements has been shown during the past year by several landholders in this district who have the ability to buy but who have not as yet been brought to the point where they are ready to make purchases. In one case a small tractor has been taken on trial, to be purchased if satisfactory. The one thing necessary to stimulate this business is efficient demonstration of implements. This method is admittedly expensive, and the market is limited, but, without such means the implement business in this district will not go beyond the catalogue stage. (Consul Raymond Davis, Aden, April 25.)

Interest in Agricultural Implements in Cochin-China.

An increasing shortage of labor in Cochin-China has caused the government and the large planters to turn their attention to modern farm machinery. Motor-culture weeks were organized by the government for the purpose of interesting the growers in modern methods and labor-saving devices. It will be difficult to introduce modern implements among the native planters so long as coolies are available, but, as labor becomes more difficult to obtain, there will be greater need for mechanical substitutes. The production of rice per acre has been decreasing steadily each year, and, as this is the most important crop, the government realizes that only with fertilizers and modern machinery can the average and quality be raised. (Consul Leland L. Smith, Saigon.)

Exposition of National Products at Teheran, Persia.

According to information contained in a letter from the Persian Minister, an exhibition of national products is to be held in Teheran, Persia, for two months, beginning September 24, 1923, at which various sections are to be set apart for exhibits of the products of foreign countries. While agricultural implements are not extensively used in Persia, this exhibition offers an opportunity for the introduction of American agricultural machinery. Requests for participation in the exposition should be addressed to the Conseil Superieur de l'Exposition at least three months before the date of opening. The telegraphic address for the exposition is: Teheran, Exposition. The mail address is: Teheran, Exposition des Produits Nationaux.

Polish Production of Implements in Excess of Demand.

Production of implement factories in Poland now exceeds the demand in the domestic market, and the surplus can not be exported as Polish prices are higher than either German, Czech, or Austrian prices. The domestic demand has fallen off in consequence of the general stagnation in all lines, and although until recently there was a limited export of Polish agricultural machinery to the Baltic States, this demand has fallen off as a result of the relatively high prices charged for Polish goods. Czecho-Slovak and Austrian manufacturers are making strenous efforts to market their products in Poland, and their efforts have met with some success in such articles as sickles and scythes, which are generally of better quality than those of Polish make. Stocks of agricultural machinery of local manufacture in the hands of Polish dealers are pressing heavily upon the market and some wholesalers are reported to be unloading at 30 per cent under factory prices. (Acting Commercial Attaché H. B. Smith, Warsaw, May 7.)

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Allen, Charles E.....	Damascus, Syria....	July 31	Department of State, Washington, D. C.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Indian Jute Sowings.

Reports from reliable sources state that on April 1 approximately 25 per cent of the Indian jute crop had been sown, and estimate that about 2,400,000 acres will be under cultivation this year. (Assistant Trade Commissioner Charles B. Spofford, Calcutta, April 26.)

Port Elizabeth Wool and Mohair Shipments in March.

March shipments from Port Elizabeth to the United States included: Mohair, 10,555 pounds; scoured wool, 278,962 pounds; and grease wool, 1,198,660 pounds. (Consul Monnett B. Davis, Port Elizabeth, Cape of Good Hope, South Africa, April 17.)

Kobe Exports of Loofahs Decrease.

Exports of loofahs (the fibrous portion of a gourd grown in the southern part of the island of Nippon, Japan) from Kobe to the United States have decreased in total value from $101,941 in 1919 to $15,056 in 1922. (Consul E. R. Dickover, Kobe, April 14.)

Egyptian Wool Trade Increased.

Egyptian exports of raw wool increased from 490 metric tons in 1921 to 588 metric tons in 1922. Imports of wool manufactures into Egypt in 1922 were valued at $6,925,995, compared with $5,957,987 in 1921. (Consul Lester Maynard, Alexandria, March 2.)

Silk Grass in Nicaragua.

On the eastern coast of Nicaragua there is considerable silk grass growing wild. It has a strong silk-like fiber and the Indians use it for making rope. The long rainy season necessitates some sort of artificial drying in the treatment of the fiber. (Consul William W. Heard, Bluefields, May 5.)

Leipzig Fur Quotations Available.

A report on Leipzig fur quotations from April 8 to April 14, 1923, for both wild and raw skins, has been received from Consul Hernando de Soto, Leipzig, Germany, and will be available to interested persons upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. Refer to file No. 95260.

Philippine Market for Neckwear.

There is a steady demand in the Philippines for neckwear selling at 2 pesos (approximately $1) and less, but at no time can this be considered an important market. Shops catering to the class of trade that will pay the price for American neckwear are already carrying stocks. (Trade Commissioner John A. Fowler, Manila, April 3.)

Persian Rug Exports Increase.

Persian rug exports to the United States for 1922 totaled 555,582 square yards, valued at $3,221,247. These totals represent an increase of almost 300 per cent compared with pre-war years and a large increase over 1920, when the totals were 116,984 square yards and $1,660,143. The 1921 totals were 390,589 square yards and $2,000,492. (Consul Bernard Gotlieb, Teheran, April 6.)

Market for American Neckwear in Australia.

Medium-priced American neckwear, it is believed, could be sold in the Australian market if properly introduced. Knitted neckties would enjoy a larger demand than any other kind, but ties made of silk, artificial silk, or silk mixed with other fibers would likely find a small sale. Additional information as to the market and suggestions for entering this market may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. (Trade Commissioner J. W. Sanger, Melbourne, April 21.)

Trade Information Bulletins Available.

The Textile Division recently has issued a trade information bulletin on The Cotton Industry of Peru, which discusses the methods of production, financing, and marketing of cotton in Peru, and should be of especial interest to cotton merchants. Another report, Survey of the Czecho-Slovak Cotton Industry in 1922, deals with factors affecting the Czechoslovakian cotton industry and should appeal especially to the American textile manufacturer and merchant, both from a competitive and economic point of view. Copies of these publications may be obtained upon request from the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Scouring of Libyan Wools Suggested.

Libyan wools from the interior are placed on the markets at the coast. They are not only unscoured, but it is said that the Bedouin sellers habitually mix various foreign substances with the fleeces to add to their weight. Buyers make allowances for this practice, which is generally recognized. The suggestion recently has been made that the Italian Government should establish a wool-scouring plant at some central point in the Italian colony of Libya in order to give Libyan fleeces a better name among foreign buyers. Merg is named as an especially advantageous location for the purpose. (Trade Commissioner A. A. Osborne, Rome, Italy, April 21.)

Efforts to Improve Chinese Silk Crop.

The Chinese Government is granting the International Committee for the Improvement of Sericulture in China only $75,000 a year at present. This amount is barely sufficient to pay the expenses of six cocoon stations, so that operations are greatly restricted. Not only is there urgent need for more egg-testing stations, but the Chinese farmer must be impressed with the fact that eggs put at his disposal should not be mixed nor hatched with ordinary eggs, most of which are infected and unhealthy. It is estimated that if only tested eggs were used, cocoon production in China would be increased by 60 per cent. Even under present conditions a decided improvement could be effected if the farmers would refrain from mixing good eggs with bad. (Trade Commissioner Lansing W. Hoyt, Shanghai, April 19.)

CHILEAN PIECE-GOODS MARKET.

Consul George A. Makinson, Valparaiso.

The American piece-goods trade with Chile is now in a much sounder position than at any former time. It is true that during the war years a slightly larger volume of American goods was sold, but conditions at that time were distinctly abnormal since several important continental trade rivals were temporarily out of the market. The damage to the general reputation of American exporters, caused by the activities of mushroom concerns that flourished at that period, has been largely repaired. The later post-war years offered United States merchants an opportunity to consolidate and stabilize their position, which has not been overlooked. There has been a noticeable improvement in the quality of merchandise sent to this market. This, together with the splendid reputation for fair dealing of the firms now supplying this field, is enabling the United States to hold its trade in the face of keen and well-organized rivalry.

The United States is meeting with little serious competition in heavy goods. As a general rule it would seem that the rougher the article the more advantageous is the American position. Most of the osnaburgs (flour sacking), ducks, drills, ticking, denims, and khakis seen here are of American origin. Incidentally, however, it should be observed that small shipments of British grey sheetings and drills again are entering the market after an absence of several years. This reappearance of heavy Manchester goods is attributed to the fact that, while the majority of American mills raised prices from 20 to 30 per cent, following the short crop of 1922, British manufacturers limited their increase to 5 and 10 per cent.

Price an Important Factor in Chilean Trade.

The upward trend of American prices is of considerable importance in the local trade, for it must be remembered that the wages of Chilean workers were not materially increased during the war and their purchasing power at present is perhaps as low as that prevailing in any other Latin-American country. Retailers can not sell goods if they exceed certain limits. For example, shops which formerly carried a well-known American brand of Porto Rican drill running 3 yards to the pound and retailing at 2 pesos (about 25 cents) per yard have been obliged to discard this and take on an inferior drill running 4 yards to the pound, because they found that the working classes would not go beyond 2 pesos.

Both Belgium and the Netherlands lately have begun to supply limited quantities of indigo drills, sheetings, denims, and khakis. These goods appeal to the eye and are cheaper than corresponding American lines; however, as their colors are not fast, they are not meeting with any great success.

The United States has a fair share of the trade in coverts and cottonades, but in normal times Germany is very strong in these commodities, its primacy being due in large measure to the fact that it supplies double widths. Italy lately has shown some interest in this line and is understood to be offering goods at a figure slightly lower than that of American exporters.

Although Japan's cotton-goods trade with Chile has fallen off considerably in post-war years, this country is still a factor to be reckoned with in gray goods and towelings. Japan's most serious rival is Spain. The American share of this trade is limited to medium grades and does not represent more than 15 per cent of the total.

Americans Face Keen Competition in the Finer Lines.

Bleached sheeting is used extensively in Chilean underwear factories and for bed sheets. Manchester controls the bulk of this trade, as merchants consider British bleached goods to be better finished than the American cloth.

Chambrays, muslins, poplins, and ginghams, especially the finer grades, continue to come from Manchester, although occasionally small orders are booked by representatives of American mills.

Printed flannels comprise a relatively important line. The United States does a good business with Chile in these lines, but has to meet competition from Great Britain as well as from Belgium, Italy, and Czechoslovakia.

Switzerland offers severe competition in the very highest grades of voiles, organdies, batistes, and nainsooks, and also supplies 90 per cent of all embroideries.

Adverse Factors Affecting American Sales of Finer Cotton Goods.

American trade in heavy goods appears to be established so firmly that nothing remains to be said on this subject. In the case of finer goods, particularly ginghams, percales, and other printed lines, there are three factors adversely affecting sales, which should be mentioned. These are arbitrary mill assortments, variety of designs, and the preparation of samples.

Practice of Arbitrary Assortments the Greatest Obstacle to Introduction of Fancy Goods.

The practice by numerous American mills of forcing arbitrary assortments upon customers may be regarded as the greatest single obstacle to the more widespread introduction of fancy goods. This happens especially in percales and other printed lines where a mill produces a certain pattern in different colors. As a general rule, it is necessary for the customer to accept the assorted colors, say, for example, blue, red, green, and brown, in specified quantities per color to the case. For instance, the mill says that the customer must take the following assortment per case of 50 pieces—15 blue, 20 red, 7 green, and 8 brown. This assortment may be quite satisfactory for the American market. It may be suitable even for different export markets, yet not be acceptable in Chile. Taking the above assortment as a base it can readily be seen that if blue, green, and brown sell well in this country an importer is not going to take the unsalable red to obtain the colors he can dispose of.

Variety of Patterns—Manufacturers' Brands.

The variety of designs, in woven goods as well as in prints, is considerably greater in European sample collections than in American. Even the largest American manufacturers limit their assortments to from 4 to 15 patterns, whereas with Manchester mills it is not uncommon to offer from 50 to 100 patterns. As a result, local buyers of American lines often bring in almost identical assortments, and the ensuing competition is much keener than it would have been if they had been able to select distinct assortments.

Another factor tending to increase competition and therefore cut down profits is the American manufacturer's insistence upon marking goods with his own brands. In this connection it is understood that cer-

tain Manchester houses having direct connections with one or two of the largest dry-goods firms are not only ready to make up any pattern which the customer may submit, but they also are prepared to provide neutral tickets and to obligate themselves not to offer the same pattern, with or without the neutral ticket, to any other Chilean importer.

While the American manufacturer's practice of marking his goods with his own brand probably is only a minor detail in large markets, in a small field like Chile, where import houses are few and the proprietors of retail stores are accustomed to shop around from importer to importer, it is a matter of considerable importance. Lately a few American houses, following the custom of their Manchester competitors, have made a concession on this point and are commencing to ship their goods with neutral tickets.

Samples Important in Chilean Trade.

Local buyers are accustomed to receive specially prepared samples (for which they expect to pay) as soon as possible after placing orders. Complaints are heard in the trade that American firms are sometimes prone to ignore entirely customers' instructions on this point or to send poorly prepared samples after the merchandise has been shipped. The result is that the local importer, instead of being able to dispose of at least a part of the merchandise before it arrives, must wait until he has the goods in his warehouse before he can prepare proper samples. As a rule merchants in Chile are not prepared to make up their own samples, while in New York and other American cities there are firms devoting themselves exclusively to making up samples in any form required. As a consequence of approaching customers with poorly arranged samples, either those received direct or those made up in Chile, the local importer is often handicapped in selling his goods.

If manufacturers in the United States can see their way clear to modify their foreign sales policies so as to meet more fully the requirements of the Chilean market, especially as regards arbitrary assortments and branding, the resulting new business should in the long run amply repay any policy concessions involved. A Valparaiso representative of an American firm who has been on the ground for a number of years even goes so far as to predict that such a change of policy would enable him to double or triple his sales within a year.

Danish Hosiery and Knit-Goods Market.

Assistant Trade Commissioner H. Sorensen, Copenhagen, May 9.

The Danish demand for hosiery and knit goods, which had decreased to a very great extent during the past two years because of the general depression and overstocking which took place immediately after the war, has become much more active during the first four months of the current year. Concurrently with this general improvement in the knit-goods market, the demand and marketing opportunity for American products also have improved considerably, due chiefly to the diminishing seriousness of German competition. Danish hosiery and knit-goods importers and distributors, who heretofore dealt solely in German goods, have recently evinced considerable interest in American products, and in several cases have requested assistance in forming American connections.

The Danish hosiery trade is divided about equally between cotton and wool products, each of these amounting to about 45 per cent of the total consumption, the remaining 10 per cent being silk and artificial silk. The yearly consumption of cotton hosiery averages approximately 250,000 kilos, of which only about 25,000 kilos are supplied by the domestic industry. The balance is imported chiefly from Germany, the United States, and England.

Other cotton knit goods, of which underwear constitutes the chief item, are also supplied mainly through importation, the total annual consumption being about 300,000 kilos, the major portion of which is imported from Germany, the United States, and England. The domestic production of this class is about 100,000 kilos.

The men's cotton sock preferred by the Danish trade is the low or medium-priced article, selling at retail for from 2 to 3.50 crowns per pair (1 crown=$0.1828 at present exchange). Solid colors—black, brown, or gray—are most in demand, but with the Oxford shoe coming more and more into use, the striped or multicolored men's half hose also are gaining in favor. In women's cotton hose, the full-fashioned, heavily mercerized types, selling at retail between 3 and 7.50 crowns are most popular. The fact that the women's hose of German make are more heavily mercerized than the American, and are also full-fashioned, whereas the American product has a mock seam, has as much to do with the popularity of the German articles, as has the price element. This price difference between the German and American products, while still amounting to from 5 to 15 per cent, has been more than equalized by quality considerations, and indications are that the American product will continue to find increasing favor in the Danish market.

Woolen Knit Goods Imports Largely from England.

Woolen hosiery, of which the total yearly consumption averages about 600,000 kilos, is, like cotton hosiery, supplied partly by importation, the major portion coming from England. The domestic industry supplies about 325,000 kilos. Other woolen knit goods, consisting chiefly of underwear and sweaters, are consumed in quantities averaging slightly less than 450,000 kilos per year. Of this total about 150,000 kilos are imported, chiefly from Germany and England.

England, which before the war held a very important place as a source of supply to the Danish wool knit-goods trade, during the first two post-war years attained complete domination of the trade. During the last two years, however, the German wool knit goods have replaced the English article on the Danish market in much the same way and to the same extent as German cotton knit goods have replaced American cotton knit goods.

Danish Market for Silk Goods.

Silk hosiery and other silk knit goods, chiefly sweaters, are sold only to a very limited extent, because of adverse climatic conditions and also due to the prevailing financial and economic depression affecting many classes.

The pure-silk hosiery market is dominated by the United States. While the artificial-silk knit goods used in Denmark now come chiefly from Germany, American goods of this class are at present undoubtedly gaining ground. The German product has a very good

appearance, but, according to reports, it possesses extremely poor wearing qualities—a fact which has forced itself upon the attention of the Danish buying public. It is a common complaint that German artificial-silk hosiery is so brittle that it "breaks" at the very first wearing. German prices on artificial silk knit goods are still considerably below those of American products.

American silk hosiery is recognized everywhere as being of superior quality, and is often demanded in the retail stores by the name "American." Of the entire demand for silk hosiery, 75 per cent is for women's wear. Men's silk half hose are used chiefly for evening attire. Men's hose, selling at from 5 to 7 crowns per pair, are favored, while retail prices for women's silk hose range from 8 to 30 crowns, those of medium price being preferred.

[A list of importers of knit goods and hosiery may be obtained from the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or the Textile Division at Washington by referring to file No. CI-70.]

Indian Textile Situation.

Cable from Consul Harold Shantz, Calcutta, May 30.

The Bombay cotton market is firm. Receipts from September 1, 1922, to May 23, 1923, were 3,230,000 bales. Mill consumption for the same period totaled 1,702,900 bales, and stocks on hand, 757,000 bales. April exports of raw cotton from India amounted to 75,632 tons.

Imports of piece goods into India in April were 84,706,000 yards of grey, 35,836,000 yards of white, and 27,966,000 yards of colored cloth. The United Kingdom furnished 86 per cent of the grey, 98 per cent of the white, and 91 per cent of the colored. Japan is credited with 12 per cent of the grey piece-goods imports, and the Netherlands with 2 per cent of the colored. The piece-goods market continues dull but steady. The Ahmedabad cotton mills are still closed on account of strikes.

Raw-jute and gunny-cloth markets are quiet and steady. Exports of manufactured jute in April were 46,169 tons.

Woolen Rag and Shoddy Trade of England.

Consul Percival Gassett, Leeds, April 21.

During the latter half of 1922 there was a steady though very slow recovery in the rag and shoddy trade of the Leeds district, and in the first months of the current year a more distinct revival has been experienced.

The most important use of woolen rags is for consumption by the West Riding mills, and the surest index of the state of business of that district is the volume of imports of woolen rags into Great Britain. For several years before the war the imports of rags ranged between 8,960,000 and 11,100,000 pounds per month. In February, 1920, the imports were down to about one-twelfth of the normal quantity, amounting to only 855,680 pounds, and in February, 1922, they were still at the low level of 2,315,040 pounds. By February, 1923, the imports of this commodity had risen to 6,247,472 pounds.

Great Britain is not usually a large exporter of woolen rags or of the shoddy or mungo extracted from them; and in ordinary circumstances heavy shipments are not regarded with much satisfaction, as the retention of the materials in England indicates a healthy demand in the home trade.

The position as regards exports of woolen rags from Great Britain to the United States is far different now from that of the pre-war period. In the year 1913 the total value of these exports from the Leeds district was only $14,592, and from that time until the latter part of 1921 no rags were shipped. Then a sudden demand sprang up in the United States, and the rag exports from this district amounted to $633,476 for the first quarter of 1922, $1,133,589 for the second quarter, and $1,271,119 for the third quarter, but only $276,412 for the last. Exports for the first quarter of 1923 showed an increase amounting to $946,664.

Egyptian Cotton Trade.

Consul Lester Maynard, Alexandria.

Although cotton is Egypt's principal product, it is of an exceptional grade and when used in the manufacture of textiles is not consumed in Egypt except to a very limited extent. As a consequence the entire crop is exported and textiles, including large quantities of cotton piece goods manufactured from lower grades of cotton produced abroad, are imported.

The United States is an important market for Egyptian raw cotton, taking 147,763,638 pounds, valued at $41,099,273 in 1922, which was an increase of about 47 per cent over the previous year and more than double the 1913 shipments.

Egyptian imports of yarns and textiles, of which cotton piece goods form the principal group, were valued at $67,437,956 in 1922, compared with $58,035,208 in 1921 and $34,775,230 in 1913; but the American share in this trade is insignificant, amounting to only $272,547 in 1922.

There is no doubt that a greater proportion of this trade could be secured by American manufacturers if a serious effort were made to introduce American cotton goods into this exceptionally good market.

French Textile Situation Slightly Improved.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, June 8.

Stocks of raw cotton warehoused at Havre on June 1 were 84,000 bales, including 67,000 bales of American cotton. There were also 24,000 bales afloat for this port, 23,000 of which came from the United States. Stocks at other continental ports totaled 206,000 bales, of which 148,000 bales were American. Stocks afloat for these ports amounted to 133,000 bales, including 53,000 bales from the United States.

The operations of cotton spinners are satisfactory. Forward orders are being placed to December, but prices received leave little margin of profit. The season demand for light-weight materials is backward.

The demand for finished wool products is weakening somewhat and manufacturers hesitate to accept orders involving future commitments.

The local flax crop is uncertain as a consequence of the cold weather. The area sown to flax this year is 15 per cent greater than in 1922. The linen business was improving at the end of May. Manufacturers are buying because the possibility of seasonal price concessions is disappearing and because of the uncertainty of the local flax crop.

The prospects for the new silk crop in both France and Italy are good. Although raw-silk stocks are low and prices unchanged, silk buyers are awaiting the new crop and confining their purchases to spot deliveries and near-by raws. The production of silk spinners is sold to the end of August. Manufacturers are avoiding future commitments. The market demands silk mixtures on account of the high price of natural silk. The demand for artificial silk continues active.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, western Europe: Conditions in French textile industries.

Far East: Effect of Sukkur barrage on cotton production in India.
Tariffs and trade regulations—British India:
Cotton excise tax reduced.
Cotton trade restrictions.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

BANKRUPTCY LAWS OF PANAMA.

Consul George Orr, Panama City.

Bankruptcy proceedings in Panama are governed by the entire third book of the Commercial Code, and by Chapter V of Title X of the second book of the Judicial Code. An individual or firm may be declared bankrupt by the judge of the circuit in which the debtor has his commercial residence, and in case he has no commercial residence, by the circuit judge for the district in which his personal residence is situated. Should there be two or more establishments in distinct places, the respective courts are equally empowered to declare bankruptcy.

According to Article 1534 of the Commercial Code, the declaration of bankruptcy may be pronounced on the petition of the debtor or his legal representative; on a petition instituted by a legitimate creditor, or on the petition of the Public Ministry in case of flight or concealment of the debtor without his having left a paid and instructed representative to fulfill his commercial obligations.

Acts Constituting Insolvency.

Article 1534 of the Commercial Code requires the declaration of bankruptcy of any individual or association failing in the payment of one or more clearly due and payable obligations resulting from commercial transactions. The debtor is automatically declared bankrupt by the courts as a result of three or more legal executions filed against him in one and the same place without his having presented sufficient property to provide for the payment of the total amount of such executions (Judicial Code, Article 1781).

Procedure in Bankruptcy Cases.

Procedure in the matter of the declaration of bankruptcy is virtually the same whether in case of individuals, copartnerships, or stock companies. In case bankruptcy proceedings were instituted abroad against the branch of a local firm, the principal office of the firm in Panama could be declared in bankruptcy by the local courts following the receipt of a rogatory commission from the foreign court which declared the branch bankrupt.

Article 1795 of the Judicial Code provides that when a bankruptcy is declared, a receiver shall be appointed and summons shall be issued to all interested persons to present their claims within 30 days, and a date shall be fixed by the court for the general assembly of creditors.

In order to take part in the bankruptcy proceedings, the creditor must be present in person, or be represented by some one legally authorized to act for him. According to article 1827 of the Judicial Code a power of attorney signed by the creditor in the presence of two witnesses is sufficient for the designation of a representative, or in the absence of such witnesses, two well-known persons may certify to the authenticity of the signature of the signer of the power. A solicitor or attorney to represent the creditor may also be designated by means of a telegram. In cases where time will permit, it probably would be advisable to have the power of attorney authenticated by the Panaman consul at the place where it is drawn up. There are, however, no legal requirements to this effect.

Proof of the legality of a claim is established by proving the legality of the credit claimed.

Status of Consigned Goods.

Merchandise shipped on consignment to be sold by an individual or firm for the account of the shipper, upon which only a commission is earned, is not included in the estate of such individual or firm in the event of bankruptcy.

Merchandise sold on credit, which has not been delivered at the warehouse or commercial establishment of the bankrupt, may be reclaimed by the creditor. Still further, merchandise sold on credit, not paid for in whole or in part, found in the warehouse of the bankrupt or deliverable at his order, when packed and in such condition that it can be identified specifically by the marks or numbers of the packages, may be reclaimed by the creditor from the receiver. The receiver may, however, take possession of such merchandise by paying the shipper for it in full.

Goods in transit may be diverted by the duly authorized agent or attorney of the shippers, provided that they were not paid for in whole or in part. Goods in transit can not be included in the bankrupt's estate, if unpaid for, unless the receiver makes full settlement with the shipper as in the case above.

Remittance Drawn on Insolvent Bank.

When a local firm remits by a bill of exchange drawn through a local bank in the payment of a foreign debt,

and the bank becomes insolvent before the funds have reached the creditor, the debtor is not held to have discharged his obligation toward his creditor unless he was instructed by the creditor to make his remittances through any local bank or a specific local bank by bill of exchange, and the specifically designated bank in the latter case becomes insolvent.

Some variation of the procedure set forth in the law codes is doubtless allowable, when approved by the meeting of creditors. An instance of this occurred in the failure of a prominent company last year, when the first claims paid were those amounting to less than $20. This was done by the receiver and the meeting of creditors chiefly with the purpose of clearing the bankruptcy proceedings of a large number of accounts, the total of which did not affect materially the interests of the other creditors.

Agency Agreements in Foreign Trade.

The Division of Commercial Laws announces the publication of Trade Information Bulletin No. 102 on Agency Agreements in Foreign Trade. This subject is of great importance to American exporters, for whom William G. Marvin, chairman of the legal advisory committee of the Division of Commercial Laws, has in this bulletin presented the salient points to be considered in the preparation of agency agreements with representatives abroad. American business men and members of the bar may secure copies by applying to the Division of Commercial Laws at Washington or to the district or cooperative offices of the Bureau.

Commercial Arbitration in the United States.

The International Chamber of Commerce, Paris, has just issued a bulletin entitled Digest No. 44, Arbitration in the United States of America, by Julius H. Barnes, president of the Chamber of Commerce of the United States of America.

Decision of Argentine Court Involving Employers' Liability.

Trade Commissioner George S. Brady, Buenos Aires, May 3.

On April 30, Judge Casabel, of the Commercial Court of Buenos Aires, handed down a decision regarding employers' liability which should be of interest to American firms operating in Argentina.

A workman lost his right hand in an accident while in the employ of a Norwegian store. The employees of this store were insured with an insurance company which had just failed and whose assets had been found insufficient to meet its liabilities. The injured man then sued his employer for 6,000 pesos, the sum awarded by the Labor Bureau, and the judge ordered the company to pay this amount with costs within 10 days, ruling that the employer is at all times directly responsible for the damages awarded to an injured workman as compensation for his injury.

Codification of Polish Law.

Acting Commercial Attaché H. B. Smith, Warsaw, April 21.

After a work extending over a period beginning in November, 1919, the commission for codifying Polish law has presented to the Diet for its approval the first 10 chapters of the code. These chapters provide for the system of courts, the judges and their qualifications, the jurisdiction of the various courts, and various regulations for maintaining the authority of the courts, the division of functions among the judges, etc.

The work of codifying the Polish law as well as the present administration of justice in reconstructed Poland is seriously complicated by the fact that at present five different codes of law obtain in Poland: In Posnania, Pomerania, and Polish Upper Silesia, the Prussian Code; in Galicia and in Polish Teschen, Silesia, the Austrian Code; in Congress Poland, the Napoleonic Code; in the 17 communes of Spitz and Orawa, the Hungarian Code; and in the eastern districts, the Russian Code.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

UNITED STATES PRODUCTION OF BOOTS AND SHOES.

The shoe industry of the United States during the four months, January–April, 1923, manufactured 128,513,069 pairs of footwear other than rubber, or approximately 23,000,000 pairs (21.4 per cent) more than during the corresponding period of 1922. The increased production applied to all classes of footwear. The all-leather shoes—infants', men's, and athletic and sporting—show respective increases of 31.9, 27, and 13 per cent. Canvas and other fabric shoes increased 60.6 per cent.

The April, 1923, production totaled 31,632,504 pairs and exceeded that of January and of February, but did not equal the March output.

The following table shows, by class designation, the number of pairs of footwear other than rubber manufactured in the United States during April, and the four months' period ended April 30, 1922 and 1923:

United States production of boots and shoes.

Classes.	April—		January–April—		
	1922	1923	1922	1923	Increase in 1923.
	Pairs.	*Pairs.*	*Pairs.*	*Pairs.*	*Per cent.*

French Shoe Industry and Trade.

Leonard G. Bradford, clerk in American consulate, Paris, May 4.

The orders which are being received by French shoe factories are small and not so numerous as reasonably might be expected. Parisian dealers particularly manifest a reticence in sending orders, owing to the fact that they receive a large number of offers from traveling salesmen. Moreover, the dealers in Paris are desirous of buying as late as possible in order to obtain the latest styles, the diversity of which as regards fancy shoes has been great. Manufacturers of men's fine shoes are very busy. In these centers labor is again scarce, while in other places the production could be increased.

It appears that the shoe industry is almost completely out of raw material, so that the market is dependent upon exchange fluctuations in buying raw materials, thus making it difficult to determine the price of shoes in advance. There are no manufactured stocks on hand and business is hindered by this fact, as retailers in many cases desire immediate deliveries. Shoe dealers are of the opinion that consumers are provided with shoes for the summer season only to a very small extent, and anticipate a marked revival in shoe sales during May.

Types and Quality of Shoes in Demand.

The oxford shoe in box calf or in kid is most popular at the present time in men's shoes. The masculine clientele has a tendency to buy shoes of fine quality capable of rendering good service; thus manufacturers making a specialty of this quality of shoe have maintained their prices, of course furnishing merchandise of the best quality. However, in the majority of cases shoes are sold for 50 to 80 francs, rarely exceeding the latter price.

The feminine clientele is more readily buying cheap shoes, and in general the average price paid for shoes is inferior to that of last year. Although shoes of French manufacture are sold for 50 to 80 francs a pair in the outlying sections of Paris, the prices of shoes in the fashionable stores in the center of the city are from 100 to 150 francs. Women's fancy shoes, which are manufactured in a great variety of designs, chiefly in contrasting colors, appear to be in great demand, and retail for 85 to 150 francs. Kid and deer skin in colors, particularly light shades, are becoming more and more in favor for women's shoes, while the demand for patent leather is declining. Calfskin, also in light shades, is in favor. It is observed that one model of women's shoes much in demand is a brogue in mahogany box calf or horsehide with a heavy sole and a low heel.

It is predicted by some dealers that the idea of having shoes for women's evening wear made of the same material as the gown worn will gain favor before the next winter season.

Demand for Foreign Shoes in Tientsin, China, Limited.

Consul J. C. Huston, Tientsin, May 1.

There are no stores devoted exclusively to the sale of American boots and shoes or to any other foreign manufactured shoes in the Tientsin district, this class of goods being handled by the department stores, of which there are five in Tientsin and three in Peking. Only one of these stores carries a stock in excess of 100 pairs of men's or women's shoes, and the range of sizes is very incomplete. To carry a complete stock would involve an outlay of approximately $40,000 local currency (about $21,000 U. S. currency), and the demand does not warrant such an expenditure by any one store. One reason for the limited demand is the fact that dealers demand a profit of 60 to 100 per cent on these goods, which results in very high prices. Foreign-made shoes range in price from $18 to $30 local currency ($9 to $15 U. S. currency) per pair, whereas a good-looking shoe, made of high-grade, imported leather, can be purchased from the native shoemakers for $10 to $14 ($5 to $7) per pair. This state of affairs has naturally forced the foreign population to turn to the native shoemakers, who have become very skillful at imitating foreign models.

At the present time British shoes are underselling American in the Chinese market. One store is known to have a large stock of American shoes on hand but prefers to hold them for excessive prices rather than reduce the price and dispose of the stock. The widths which find the largest sale in the market are D and E. The stores make no pretense of measuring and fitting shoes according to American practice.

Conditions in the French Leather Glove Industry.

Consul Hugh H. Watson, Lyon, April 24.

Reports covering the year 1922 from glove manufacturers in the Isere Department (of which Grenoble is the capital), the leather glove center of France, were disquieting. The domestic demand has lessened and exports abroad, especially to the United States, have fallen off. It is estimated that the production of leather gloves in this district has fallen by at least one-fourth. The value of the exports of Grenoble gloves to the United States in 1922 was 27,558,143 francs and to Great Britain and British dominions approximately 18,000,000 francs; shipments to Paris and other French markets were in the vicinity of 16,000,000 francs; about 2,000,000 francs' worth went to other countries, which are small importers from this market.

It is plain that countries of low exchange, particularly Germany, are in a position to undersell on the American market, and that cheap imported gloves are taking the place of Grenoble gloves, and on account of this situation the conditions in the French glove industry at the close of 1922 were not auspicious.

Employment in British Boot and Shoe Industry.

Employment in the British boot and shoe industry during April showed an improvement in most of the midland centers, but a decline in the Bristol and Kingswood districts and the Leeds district. Conditions in the various districts showed little change as compared with March, and employment was still slack. Short time was prevalent, especially in the heavy boot trade. The percentage of workpeople unemployed in the boot,

shoe, and slipper making and repairing trades, as indicated by the unemployment books, was 8.5 per cent on April 23, as compared with 8.6 per cent on March 26, according to the Ministry of Labor Gazette, London, for May, 1923.

Additional information regarding shoes and leather manufactures appears in this issue under the following section:

Cable review, western Europe: French shoe manufacturers affected by backward season.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

SALE OF THE FRENCH GOVERNMENT MERCHANT MARINE.

Eugene T. Chamberlain, Transportation Division.

Up to the end of March, 1923, the French Government had sold three-fourths of its merchant fleet; it now seems probable that the entire fleet will be disposed of by July 31, 1923.

Post-War Reconstruction of Merchant Fleet.

During the war the French merchant marine lost 915,000 tons—40 per cent—of its pre-war tonnage, and French shipyards were almost wholly occupied in making munitions and in repairing damaged allied ships. In March, 1918, the National Assembly appropriated 500,000,000 francs for the purchase and construction of merchant ships for Government account, and during the five months following the armistice 350,000,000 francs were added for the same purpose. The Government's efforts were supplemented by private French shipowners, who bought or had built in England (at an approximate cost of 1,500,000,000 francs) ships aggregating about 1,000,000 dead-weight tons. The delivery of German ships as reparations for allied ships sunk by submarines was not completed until 1922; but, through purchase and construction, the French Government's fleet in 1920 had reached a total of over 800,000 tons.

Legislation for the Sale of the Fleet.

The effects of the Government's fleet upon the restoration of the French merchant marine and French commerce and the expense it entailed on the Government were already being felt. The subject of the disposition of its fleet was brought to the attention of the Government and the National Assembly in February, 1920, by the Armateurs de France, an association composed of the owners of 80 per cent of the French tonnage, steam and sail, corresponding to the American Steamship Owners' Association. In July, 1921, the Chamber of Deputies decided that the Government fleet could not be maintained without financial sacrifices which the budget could not support, and by a vote of 429 to 144 passed a bill directing its sale before July 31, 1923. The Senate unanimously passed the bill, and it became the law of August 9, 1921. The only conditions of this law were that the sales should be " for the interests of the treasury," that the contracts should be approved by the Chamber of Deputies, that the purchaser could not resell a ship without the approval of the Government, and that he must pay the Government half the profit from such a sale.

Rules of Sale.

A report covering the progress of liquidation up to January, 1923, states that the liquidation committee gave preference, first, to owners whose ships had been torpedoed and who had not been compensated and, second, to owners who would agree to operate the ships purchased in trade between France and its colonies. The committee fixed as a base price 400 francs (approximately $28) per dead-weight ton of a new steamer of 6,000 dead-weight tons. Prices were graded according to age, general condition, type, etc. The French Government's ships had all been built during or after 1919, while nearly all the ex-German ships were built before 1913.

By an agreement made with the Government in 1921, a company organized by the Armateurs de France contracted to buy Government ships, partly on cash payments to be made 30 per cent on the execution of the bill of sale and 70 per cent on delivery. Sales on credit were also allowed on payment of annual installments for 8, 10, and 14 years, according to the ship's age, the purchaser paying interest at the rate of 6 per cent. Such sales were also subject to periodic revision of the base price of 400 francs per ton, but that base price could not exceed 700 or fall below 300 francs. Purchasers on credit gave the Government a first mortgage on the ship and kept the ship insured for 10 per cent above its value.

On these terms, the shipowners' company bid for 385,000 tons in 1921 and was awarded 280,807 tons. In 1922 the company also agreed to dispose of 159 vessels of small value, aggregating nearly 290,000 tons, including 223,000 tons of wooden steamers built in America. It guaranteed the Government 6,000,000 francs and percentages of any amount above that sum which the ships would bring. The company thus became responsible to the Government for the purchase of 570,000 tons. Other sales to individuals were made on substantially the same terms as those granted to the shipowners' company.

Results of the Sales.

The results of the sales up to January 1, 1923, were as follows:

Vessels sold from French Government merchant marine up to January 1, 1923.

Type of vessel.	Number.	Dead-weight tons.	Price, in francs.
Steel steamers:			
Government	81	258,027	61,310,883
Ex-German	41	234,152	36,537,251
Total	122	492,179	97,848,134
Steel barges	21	35,365	2,747,751
Tugs	19	[1] 10,540	2,793,350
Steel sail, ex-German	27	91,933	3,917,641
Wooden steamers	12	26,300	2,017,170
Blanket sale:			
Steel barges	4	5,765	6,000,000
Tugs	25	[1] 23,565	
Wooden steamers	96	223,600	
Cement barges	34	36,618	
Total	159	289,548	6,000,000
Grand total	360	945,865	115,324,046

[1] Horsepower.

The ships remaining to be sold on January 1, 1923, were as follows:

Type of vessel.	Number.	Dead-weight tons.	Price, in francs (estimated).
Steel steamers:			
Government	10	41,700	17,924,960
Ex-German	2	27,750	1,985,200
Steel barges	2	1,950	122,000
Steel sail, ex-German	5	12,039	803,000
Total	19	83,439	20,835,160

Book Value and Other Factors.

The book value of the Government's ships is computed at about 1,076,000,000 francs, as, under the system of accounting fixed by law, insurance and deduction for depreciation are included in costs of operation. The book value of the ex-German ships included above is estimated at 43,243,091 francs, the amount for which they were sold, as the Reparations Commission had not finally determined the amount to be charged to the Government on this account.

The ships considered in the report of the liquidation committee do not include 14 cargo steamers of 79,900 dead-weight tons and 10 passenger steamers of 57,140 tons, which were still under construction or were just delivered late in 1922, or were to be delivered in the first half of 1923. The cost of construction of these ships, less their market value when completed, is estimated at about 60,000,000 francs. On their completion, these ships have been chartered to French owners.

The figures do not include the expense to the Government of replacing 21 steamers of 67,000 gross tons (80,000 dead-weight tons) which, while under Government charter during the last eight months of the war, were torpedoed and which the Government was under contract to replace. Replacements began in 1919, but will not be completed until the current year. The total net loss to the Government on this account is computed at nearly 145,000,000 francs.

The Government's Loss—Operating Loss.

Including all these items, the cost to the Government for the purchase and construction of ships stands at over 1,300,000,000 francs, and the proceeds from the sale of ships to be applied to the cost was about 136,000,000 francs, showing a loss of nearly 1,200,000,000 francs under this head. The following statement shows details, to which is added the loss on operations:

	Francs.
Book value of Government vessels	1,076,449,403
Construction under way, less market value of ships when completed	59,756,000
Book value of ex-German ships	43,243,091
Replacements of torpedoed ships	144,808,000
Net outlay	1,324,256,494
Deduct proceeds on sale of ships	136,159,206
Loss on purchase and construction	1,188,097,288
Loss to Sept. 30, 1922, on operation	608,600,000
Total loss	1,796,697,288

The operations accounts on September 30, 1922, showed a deficit of 256,562,271 francs on the requisition account, 98,330,462 francs on the operation of ex-German ships (of which 45,000,000 francs was owed by Germany for services rendered after the war), and 253,707,522 francs on the operation of the Government fleet, a total deficit of 608,600,255 francs. The loss under operating expenses will decrease as the Government fleet passes to the hands of private shipowners, but the ultimate loss to France on the Government's participation in merchant shipping will amount to about 2,000,000,000 francs, or, at present exchange rate, about $135,000,000.

PACKING FOR LOWEST CUSTOMS CHARGES IN BRAZIL.

William H. Windom, Division of Foreign Tariffs.

[The following article is the first of a series on the observance of customs regulations in packing for export. A second article will be published in an early issue of COMMERCE REPORTS, and the complete series will be incorporated in a handbook entitled "Packing for Foreign Markets," which is being prepared by the Transportation Division.]

A good part of the fines and harassing delays incurred in the past in shipping American goods to Brazil could have been avoided by proper precautions at the time the merchandise was packed. The following case so well illustrates the difficulties of an American shipper who failed to comply with the Brazilian customs regulations that it may be taken as typical.

Early in 1922 an American shipper employed a forwarding company in New York to pack and ship a consignment of goods to Brazil. Upon the arrival of the merchandise in Brazil, the agent of the shipper found that before clearing the goods he had to pay, in addition to the regular duties, a fine amounting to 2 per cent of the official value of the shipment. This fine had been imposed because a Brazilian customs official noted that the commercial invoice, which had been prepared by the forwarding company in New York, failed to indicate by consecutive numbers the packages comprising the shipment.

Thereupon followed a voluminous correspondence between the agent, the shipper, the forwarding company, and the Brazilian customs broker who cleared the shipment. Nine months after the arrival of the goods in Brazil, the forwarding company received a bill which included not only the original fine, but considerable incidental charges. The company wrote to the shipper

that this amount came to more than 10 times the profit made for handling the goods, and, although admitting the error in making out the invoice, asked that the claim be not pressed. At this point the shipper, evidently in desperation, wrote to the Bureau of Foreign and Domestic Commerce to inquire whether the Brazilian Government could be approached for refund of the fine, but as the fine was for a clear-cut violation of a well-established regulation the bureau could suggest no means of escape from the penalty.

Consecutive Numbering of Packages.

In order to avoid complications similar to those described above, compliance with the Brazilian customs regulation requiring that each package in a shipment be numbered in consecutive order is all important. Under a liberal interpretation, this requirement is not made to apply to uniform packages or to bulk goods, such as bags of flour and barrels of cement. It is strictly prohibited, however, to give the same number to more than one package in any given shipment.

Since one-half of the proceeds of the fine (2 per cent of the official valuation of the goods) for violation of this requirement goes to the customs employee who discovers the error, there is little likelihood that boxes improperly marked will slip by the customs undetected. This regulation was not enforced for some time at the customhouses in Brazil, but last year enforcement was revived, to the dismay of exporters who either had forgotten it or did not know that such a law existed.

Marking of Packages.

A great deal of confusion in checking up shipments in the customs has resulted from improper placing of marks on packages. According to the suggestions of a Brazilian customs official, three marks only should be stenciled on any of the six sides of the box or on any of the two opposite sides: (1) The number of the case; (2) the mark of the consignee; (3) the port of destination. A letter placed before the number of the case is considered objectionable. Other marks, such as the name of the shipper, directions for handling (in Portuguese), and the net and gross weight expressed in kilos, should appear on a separate side of the case.

Basis of Dutiable Weight.

Practically all goods shipped to Brazil are dutiable on the weight basis. Duties are assessed variously on the gross weight (weight of the article and that of the packing, not including weight of cases of rough wood); real net weight (weight of goods without any packing whatsoever); and legal net weight (gross weight after deducting tares stipulated in the tariff). There is no general rule governing the assessment of duties in Brazil, and the careful exporter should inform himself as to the regulations applicable to his particular shipment.

For goods dutiable on the gross weight, the lightest packing material consistent with safety in transit should be selected, so as to reduce as much as possible the high duty usually imposed in Brazil. For instance, as lace is dutiable on gross weight, it should not be wrapped around cardboard, but should be packed in tissue paper with an outer covering of light material.

On a number of articles the dutiable weight, as fixed by the tare allowance, varies according to the kind of container or its capacity. For instance, chemical and medicinal and pharmaceutical products are subject to tare allowances ranging from 5 to 80 per cent, according to the capacity of the glass receptacle; the smaller the capacity the greater the tare allowance. The tare allowances for glass vases and flasks are as follows: Hogsheads, 50 per cent; large cases, 45 per cent; hampers or baskets, 35 per cent. Should the articles be imported in small cases or boxes of cardboard, the duty is levied on the gross weight. By knowing the regulations applicable to various kinds of containers, the exporter can determine the most economical method of packing.

American exporters to countries where a complicated system of customs regulations is in effect, as in the case of Brazil, should establish close contact with the Bureau of Foreign and Domestic Commerce for information on customs matters.

Increase in Motor-Ship Tonnage.

Commercial Attaché Walter S. Tower, London, May 4.

British shipping circles are much interested in the steady progress of motor-ship building, and in some quarters there is a well defined feeling that the advantages found in this type of vessel offer the best remedy for the difficulties experienced by the shipping world during the past year or two. Recent statistics issued by Lloyd's Register show 118 motor ships aggregating 327,232 gross tons under construction on March 31, 1923. Close to half the total tonnage is credited to British yards, with Germany, Sweden, Denmark, and the United States making up the bulk of the remainder.

During the past year launchings of motor vessels from British yards have totaled close to 175,000 tons, and the construction under way at the end of March was 23,000 tons larger than a year ago. These facts are regarded as sufficient proof of British leadership in motor-ship construction and British appreciation of the merits of such craft, since upward of 80 per cent of the tonnage now under way is to be under that flag.

The Clyde yards have consistently led all other districts in this class of work; but, since March, 1922, their share of the total has decreased, as shown by the following figures:

British motor vessels under construction.

Region.	March, 1923.		March, 1922.	
	Number.	Gross tons.	Number.	Gross tons.
United Kingdom	32	157,784	28	124,283
Clyde district	11	76,800	14	91,600

The chief rivals of the Clyde yards are: Belfast, with two motor ships, totaling 19,000 tons; Newcastle,

four ships, totaling 17,700 tons; Liverpool, three ships of 12,000 tons; and Sunderland, two ships of 12,200 tons. It is evident from these figures that the bulk of the tonnage represents craft ranging from 4,000 to 10,000 tons. However, new contracts recently have been reported as placed for passenger vessels ranging up to 17,000 tons, with Diesel motors of 6,750 horsepower.

Day Mark for Vessels Moored or at Anchor.

The Department of Commerce, through the executive committee of the board of supervising inspectors, Steamboat Inspection Service, on May 19, 1923, amended "Rule 6.—Rule for vessels which are moored or at anchor," which action was approved by the Secretary of Commerce on May 31, 1923. The rule as amended reads as follows:

Rule 6.—Rule for Vessels which are Moored or at Anchor.—Vessels of more than 300 gross tons propelled by machinery, when moored or anchored in a fairway or channel where traffic is liable to congestion or confusion, shall display between sunrise and sunset on the forward part of the vessel where it can best be observed from other vessels one black ball or shape not less than 2 feet in diameter.

The rescinded rule reads as follows:

Rule 6.—Rule for Vessels which are Moored or at Anchor.—Vessels propelled by machinery, which are moored or anchored, shall display by day, forward where it can be best seen, one black ball or shape not less than 2 feet in diameter.

The rule as amended is an addition to the rules for lights and day signals to be carried by vessels, etc., contained on pages 26 and 27 of the Pilot Rules for the Inland Waters of the Atlantic and Pacific Coasts and of the Coast of the Gulf of Mexico; it applies only on harbors, rivers, and inland waters of the United States, exclusive of the Great Lakes and their connecting and tributary waters as far east as Montreal and exclusive of the Red River of the North and rivers emptying into the Gulf of Mexico, and their tributaries.

Additional information regarding shipping appears in this issue under the following section:

Far East: Improvement of Tuticorin Harbor, India.

RAILWAYS.

Italian Railroad Concessions.

Consul Leon Dominian, Rome, April 5.

The granting of railroad concessions and the transfer of certain railroads to private enterprise appear to have been discussed at the meeting of the Italian Council of Ministers on March 15. As far as can be ascertained, it was decided to grant concessions for a length of time that will attract investment. The intention is to exact on behalf of the Government a portion of all profits exceeding a 7 per cent dividend per share. Grantees will not be obliged to buy material and rolling stock on hand at the time of the transfer of the State railroads to their jurisdiction.

It seems probable that the State will retain the operation of trunk and important lines and particularly of the sections of the State railroads which have heretofore been operated at a profit. A number of branch lines, however, may be transferred to private enterprise.

The council also decided to concede to private interests the construction of the express railroad service between Bologna and Florence. The question of granting the construction of railroads in Sicily was also considered, as well as concessions for maritime communication between the Italian peninsula and the islands of Sardinia and Sicily.

State Management for Indian Railways.

Vice Consul Harold Shantz, Calcutta, March 29.

The Indian Legislative Assembly has decided to favor the State management of two of the largest Indian railway systems—the East Indian Railway and the Great Indian Peninsular Railway. Both of these lines are owned by the government, but are operated by companies domiciled in England. The East Indian Railway contract expires in January, 1924, and that of the Great Indian Peninsular Railway in July, 1925.

Swedish Locomotives for Argentina.

Consul General D. I. Murphy, Stockholm, Sweden, April 25.

The Railroad Board of Argentina has contracted with Nydquist & Holm A/B, of Trollhatten, Sweden, for the construction of 50 locomotives, all but 1 of which are to be of the type used on Swedish railways. The other is to be a Ljungstrom turbine locomotive, which will be given a thorough test on long runs to determine its suitability before ordering more of that type.

Exhibits Available.

Interested persons may obtain the following exhibits from the Transportation Division or through the district and cooperative offices of the Bureau of Foreign and Domestic Commerce, on requesting the exhibit number in each case:

9400—France.—Publication entitled "Le Nouveau Régime des Chemins de Fer d'Intérêt Général, par René Thévenez et Etienne Bleys." Laws and conventions covering all phases of the present system under which French and Algerian railways are operating. (Commercial Attaché Chester Lloyd Jones, Paris, May 9.)

93680—Fiume.—Official pamphlet entitled "The Port of Fiume and Its Future." An excellent description of the port and its facilities. (Consul Wilbur Keblinger, Fiume, April 25.)

Additional information regarding railways appears in this issue under the following sections:

Cable review, western Europe: Revenues and car loadings of French railways.

Latin America: American company granted concession for reconstruction of railway in Panama.

AVIATION.

Suspension of Manchester-London Air Service.

Commercial Attaché Walter S. Tower, London, May 12.

It is rumored that the air service between Manchester and London, reported in COMMERCE REPORTS, December 25, 1922, is to be discontinued, owing to the traffic being too inadequate to make it a paying venture. One of the reasons given for this lack of support from the traveling public is that the air stations lie outside the cities—in the case of London nearly 20 miles from the business center—whereas the railway stations are convenient to the business districts. Although the flight between Manchester and London takes about 2 hours, while the best train makes the distance in 3½ to 4 hours, the saving in time is negligible when allowance is made for the time required to get to and from the air stations.

Air Service Between France and Tunisia Planned.

Consul Harris N. Cookingham, Tunis, April 20.

The Antibes-Ajaccio-Cagliari-Bizerta-Tunis air service, connecting France and Tunisia via Corsica and Sardinia, is to be opened in July, according to the vice president of the French Aeronautical League. An air line joining Cannes and Tunis is also planned.

Proposed Extensions of Commercial Aviation in Germany.

Assistant Trade Commissioner W. T. Daugherty, Berlin, May 8.

Despite Germany's economic situation, the Aero-Lloyd and the Junkers-Werke, two prominent aviation enterprises, are entering the summer with relatively ambitious plans. In addition to the already established Berlin to London route, the following extensions are proposed: Berlin-Danzig-Koenigsberg (Tuesday, Thursday, and Saturday); Koenigsberg-Memel-Riga-Reval (daily except Sunday); Danzig-Warsaw-Lemberg (daily except Sunday). Beginning May 14, the following routes were opened: Geneva-Zurich-Munich (Berlin); and (Berlin) Munich-Vienna-Budapest. Most flight schedules are so arranged that convenient connections may be made with railway time-tables.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

BELGIUM-FRANCE.

Commercial Attaché S. H. Cross, Brussels, May 23.

Proposed Customs Convention Exchanging Concessions in Duties.

By the commercial convention between Belgium and France, signed May 12 and effective 10 days after exchange of ratifications upon parliamentary approval in both countries, France continues to accord Belgium the entire minimum tariff, with reductions in coefficients which amount to the lowering of duties from 10 to 15 per cent on a considerable number of articles. Belgium, on the other hand, in granting France its proposed minimum tariff (an analysis of the proposed Belgian tariff appeared in COMMERCE REPORTS for April 30, 1923) effects numerous reductions from the proposed rates.

The modifications of the proposed Belgian rates generally by way of decreases, affect various articles belonging principally to the following classes: Foodstuffs; patent medicines; leather goods; clothing; iron and steel products, including various tools; ceramic products; machines, including typewriters and sewing machines; motors; rolling stock; automobiles; and rubber goods. France grants reductions on a miscellaneous number of products, including, principally, wet cellulose products; various glass products, such as porcelain insulators and similar electrical accessories, table glass, etc.; textile products, including various woolen and linen yarns; certain leather products; and machinery constituting a limited number of items.

Both Governments are, however, empowered to modify the rate or method of imposition of duties contained in the convention, in accordance with exchange fluctuations, price variations, and similar determining factors, but without increasing the margin of protection entailed by the duty established by the convention.

The accord is applicable so long as the products listed do not show a price increase of over 100 per cent over the prices prevailing at the time of its signature, or as long as the conditions of their production and sale have not sensibly changed. In case of any change in duty increasing the margin of protection, the contracting party whose interests are interfered with thereby may demand an immediate reopening of negotiations and, failing to obtain satisfaction, may denounce the accord on three months' notice. The convention can not be denounced for a year after its entry into effect; and, after the lapse of one year, can be denounced at any time at six months' notice, save in cases of disagreement on changed rates, as described above.

The convention contains a provision to protect against severe competition from German goods. This provision establishes a list of articles of typical German production, such as chemicals, textile products, leather goods, machines, and automobiles, which, when not subject to the minimum tariff of either country, may not be admitted into either country at rates lower than those specified as applicable to these goods in the convention.

Special regulations and reduced import duties are established to govern the exchange of certain goods between Alsace-Lorraine and Luxemburg.

[In view of the most-favored-nation clause contained in the treaty of 1875 between Belgium and the United States, which is still in effect, the concessions in duties granted by Belgium to France are also to be extended to similar American goods. The principal items of interest to the United States on which concessions are made include automobiles, rubber products, typewriters, sewing machines, leather goods, tools, and machinery. The reductions granted by France are not extended to include American goods, as the United States does not have most-favored-nation status in France.

The proposed rates on automobiles and rubber tires established by this treaty appeared in COMMERCE REPORTS for May 28, 1923.]

CZECHOSLOVAKIA-FRANCE.

Cable from Commercial Attaché C. L. Jones, Paris, June 8.

Prolongation of Commercial Treaty According Duty Concessions.

By a French decree of May 31, 1923, the commercial treaty with Czechoslovakia, which was formally denounced by the French Government on February 2 last with termination effective May 2, has been continued in operation until July 15. A large number of articles from Czechoslovakia will therefore continue to enjoy either the French minimum rates or reductions from the French general rates, and French products will continue to enjoy in Czechoslovakia most-favored-nation treatment. With the termination of the treaty the rates of the general tariff would in each case have been applied to the products of the other.

[Notice of the denunciation by France of the commercial treaty appeared in COMMERCE REPORTS for March 12, 1923.]

CZECHOSLOVAKIA-LITHUANIA.

Acting Commercial Attaché H. Lawrence Groves, Prague, May 1.

Conclusion of a Commercial Treaty.

A commercial treaty was signed at Prague on April 27, 1923, by the representatives of Czechoslovakia and Lithuania. The treaty is based on most-favored-nation treatment, and is similar in most respects to the Czechoslovak commercial treaty with Latvia. The new treaty also regulates the question of Czechoslovak transit of merchandise over Lithuania in connection with its Baltic and Russian commerce. The treaty will become effective only after ratification by both Governments.

DENMARK-RUSSIA.

Cablegram from Minister John D. Prince, Copenhagen, June 9.

Ratification by Denmark of Commercial Treaty.

The temporary commercial agreement signed at Moscow on April 23, 1923, between Denmark and Soviet Russia was ratified by the Danish Rigsdag on June 8, 1923.

[A summary of the terms of this agreement was published in COMMERCE REPORTS for June 11, 1923.]

GENERAL TARIFF CHANGES.

COLOMBIA.

Consul Maurice L. Stafford, Barranquilla, May 5.

General 10 Per Cent Increase in Import Duties.

An increase of 10 per cent of the total customs duties, including the usual 7 per cent surtax, is now being collected on all merchandise imported into Colombia except through the ports of Tumaco and Ipiales.

[A notice of the proposal for a 10 per cent increase in the customs duties of Colombia was published in COMMERCE REPORTS, December 11, 1922.]

GREECE.

C. E. Dickerson, jr., clerk to trade commissioner, Athens, April 30.

Surtax on Goods Imported at Piræus.

A special surtax on all goods imported into Greece through the port of Piræus was imposed by a royal decree published in the Official Gazette of April 18, 1923, effective for three years. The proceeds of this tax are to be used for the support of the port funds of Piræus. The tax is applied as follows:

(1) 3 per cent of the customs duties assessed on dutiable goods imported from abroad.

(2) 5 per cent of the octroi taxes assessed on goods and products which are imported free of duty.

(3) 25 per cent of the above octroi tax on all goods transported from any Province of Greece.

Goods imported or transported for Government use, and goods exempted by virtue of special laws, are not subject to the payment of the above taxes.

IMPORT AND EXPORT RESTRICTIONS.

BRITISH INDIA.

Proposed Restriction of Cotton Imports to Bombay.

Restriction of the importation of American cotton to a single port (Bombay), for the purpose of fumigating it there, has been suggested as a means of preventing the introduction of the American boll weevil into India.

CUBA.

Acting Commercial Attaché Paul L. Edwards, Habana, May 26.

Importation of Potatoes from Certain Countries Prohibited.

Owing to the existence of the "potato wart" in a number of countries, and in an effort to meet the requirements of the United States quarantine regulations so that no objections may be raised against the importation of Cuban potatoes into the United States, the Cuban department of agriculture, commerce, and labor has just drawn up a decree, published in the Gazeta Oficial, of Habana, on May 25, prohibiting the importation of potatoes from Newfoundland, the islands of St. Pierre and Miquelon, the United Kingdom, Belgium, Germany, Austria-Hungary, and Mexico.

Potatoes may be imported from Canada, the Bermudas, and the Canary Islands if accompanied by a sanitary certificate. Imports of potatoes grown in the United States, when shipped direct to Cuba, are not affected in any way by the decree.

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, June 8.

Relaxation of Export Restrictions.

The Italian export restrictions have been considerably relaxed since June 3, so that licenses are now required for only the following commodities: Hemp and flax waste, rags, excluding tow; wooden railroad crossties; iron ore, except pyrites; copper, brass, and bronze scrap, except turnings; iron and steel scrap; wheat, oats, and uncleaned rice; cattle and fresh beef; asses; bones; and metallic money.

[For some time quite a number of commodities have been on the list of goods which are prohibited from exportation, while there were still further raw products which were exported only under permit by the customs authorities. Italian restrictions on exportations have been gradually reduced during the last few months, and notice of the removal of various restrictions have been announced from time to time in COMMERCE REPORTS.]

PERU.

New Quarantine Regulations Governing Trade in Live Stock.

The new Peruvian regulations for the quarantine of cattle imports and exports, promulgated March 19,

1923, were published in El Peruano, the official daily of Peru, of April 6.

[A copy of the full text of these regulations in Spanish is available for examination in the Division of Foreign Tariffs, Bureau of Foreign and Domestic Commerce, and further information will be furnished upon request.]

POLAND.

Consul General L. J. Keena, Warsaw, May 12.

Dressed Rabbit and Hare Skins Exportable Without Restriction.

The Polish Ministry of Commerce and Industry announced in the Monitor Polski of May 9, 1923 (No. 104), that the order of November 22, 1922, prohibiting the exportation of rabbit and hare skins (see COMMERCE REPORTS for February 12, 1923) refers to such skins only in their natural state (item 56–1), and that dressed rabbit and hare skins can be freely exported as furs (item 56–2).

TARIFF CHANGES ON SPECIFIC ARTICLES.

ARGENTINA.

Cable from Commercial Attaché E. F. Feely, Buenos Aires, June 1.

Changes in Export Duties for June.

The following changes have been made in the Argentine export-duty schedule for the month of June:

Article.	Former duty, gold pesos.	Present duty, gold pesos.
	Per metric ton.	*Per metric ton.*
Bran and middlings	0.08	Free.
Oats:		
In sacks	.80	0.81
In bulk	.74	.75
Quebracho log	.33	.34
Quebracho extracts	1.93	2.16
Ox hides, salt	.66	.86
Corn:		
In sacks	1.39	1.33
In bulk	1.29	1.23
Goatskins	50.00	40.00
Barley	.48	.47
Wheat:		
In sacks	.88	.91
In bulk	.62	.65
Tallow	2.74	(1)
Oil cake	1.53	1.44
Sheepskins	1.41	6.33
Linseed:		
In sacks	3.35	3.63
In bulk	3.10	3.38
Wool, unwashed, from:		
Provinces of Entre Rios and Corrientes	4.45	7.80
Buenos Aires, Santa Cruz, and Tierra del Fuego	3.45	6.02
Santa Fe, Cordoba, La Pampa, Rio Negro, and Chubut	2.73	4.77
Mendoza, San Luis, and other points	2.08	3.62
Washed wool	Free.	4.00

[1] Duty changed but cable unintelligible.

The duties on other products subject to export duty remain unchanged. For the May changes see COMMERCE REPORTS for May 14, page 45.

BRAZIL.

Commercial Attaché W. L. Schurz, Rio de Janeiro, May 16.

Condition of Temporary Admission of Tourists' Automobiles.

By a recent decision of the Brazilian Minister of Finance, automobiles and motor cycles imported by individuals visiting Brazil and intended for their private use exclusively are exempted from import duties. The amount of the import duty must be deposited, however, to be refunded to the owner on reexportation.

COLOMBIA.

Consul Maurice L. Stafford, Barranquilla, May 5.

New Surtax on Liquors and Restrictions Against Bottles Carrying Liquor Labels.

The importation of various liquors in large containers is subjected to a surtax of 30 per cent of the regular duties, and the importation of empty bottles carrying liquor labels is prohibited by decree No. 318 of March 6, 1923.

[This law is expected to stop, to some extent, the adulteration of liquors, and evasion of duty payments. The full text of the decree is on file in the Division of Foreign Tariffs, Bureau of Foreign and Domestic Commerce.]

CUBA.

Acting Commercial Attaché Paul L. Edwards, Habana, May 28.

Proposed Law for Free Importation of Cattle, Hogs, and Sheep.

A bill just introduced into the Cuban Congress provides for the free importation into Cuba of cattle, hogs, and sheep, with the declared object of reducing the price of meat consumed in Cuba.

[The present duties on hogs and rams from the United States are $1 per head, and from other countries $1.25; cattle for slaughter are $1.755 per 100 kilos from the United States, and $2.925 from other countries; sheep from all sources are free.]

FOREIGN MAILS AND PARCEL POST.

AUSTRIA.

American Trade Commissioner Wm. Ford Upson, Vienna, April 28.

Exemption of Import Permits on Parcel-Post Shipments.

The requirement of special permission for the importation of luxury articles into Austria does not apply to parcel-post shipments of a value not to exceed 100 gold crowns or $20 each. This applies to all goods listed in annex "A" of the Austrian tariff.

INTERNAL REGULATIONS AFFECTING TRADE.

BRITISH INDIA.

Vice Consul Harold Shantz, Calcutta, March 29.

Cotton Excise Tax Reduced.

The cotton cess bill, which is now law, provides for the reduction of the tax on cotton from 4 annas to 2 annas on each 400 pounds, beginning with the fourth year after the passage of the act. During the first three years the tax will be 3 annas per bale.

Authority to Restrict the Movement of Raw Cotton.

The cotton transport act which became law on February 23, 1923, permits the local governments to prohibit (except under license) the importation of any or all kinds of cotton into any area. This is for the purpose of protecting the quality of cotton grown in certain areas of British India by preventing the shipment of inferior qualities from other districts for mixing purposes.

EGYPT.

Journal Officiel, Cairo, May 10.

Removal of Consumption Tax on Domestic Sugar.

The consumption tax of one Egyptian pound (par value, $4.943) per 1,000 kilos on all sugar manufactured or refined in Egypt, which was imposed by the

decree of June 13, 1922, has been removed by the decree of May 7, 1923.

[This tax did not apply to imported sugar. See COMMERCE REPORTS for July 31, 1922, for the decree of June 13, 1922.]

UNION OF SOUTH AFRICA.

Cable from Consul C. J. Pisar, Cape Town, June 11.

Beef Export Bounties Bill Passed.

The beef export bounties bill, which was recently introduced in the Parliament of the Union of South Africa, passed that body on May 15, 1923.

[An announcement containing the provisions of this bill was made in COMMERCE REPORTS, May 7, 1923.]

UNITED KINGDOM.

Assistant Commercial Attaché Candler Cobb, London, May 8.

Postponed Operation of New Condensed Milk Regulations.

The Ministry of Health has announced, through the press, that the new regulations for condensed milk (as published in COMMERCE REPORTS of February 26, 1923) will come into operation on October 1, 1923, instead of August 1, 1923, as previously announced.

Additional information regarding tariffs and trade regulations appears in this issue under the following section:

Transportation—shipping: Packing for lowest customs charges in Brazil.

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division.

TRUST MOVEMENT AND BUSINESS OUTLOOK IN CZECHOSLOVAKIA.

Acting Commercial Attaché H. Lawrence Groves, Prague, May 12.

The depression of the past few months has given a strong impetus to the movement toward consolidation or "trustification" of industry in Czechoslovakia, a movement which has been noted in many other countries since the war. In Czechoslovakia it has been evident in consolidations of competing or supplementary industries, and especially in the association of competing establishments in cartels for the joint sale of their products, for the purchase of necessary commodities, or for control of prices.

This period of serious depression in Czecho-Slovak business seems to call forth these mutual protection associations much more energetically than the more prosperous period which followed the war. At the present time practically all the Czecho-Slovak industries are organized in associations along the lines indicated, including the various branches of the textile industry with their respective associations, iron and steel manufacturers, sugar refiners as well as the sugar-beet producers, jute manufacturers, glass manufacturers, and chemical producers. Next to the sale of products or control of prices, these organizations are turning their attention very strongly to influencing the Government on behalf of their respective industries, usually in the direction of amelioration of foreign trade restrictions, tariff modification, reduction of taxes, and modification of railway rates.

Current Business Outlook.

The somewhat improved tone that is evident in Czecho-Slovak industry and trade does not by any means reach all branches alike, but it is evident that the general trend is upward. It appears that the internal readjustment process necessitated by the appreciation of the crown last summer has been practically completed, and that Czecho-Slovak industry in general has reached a position where it can compete in international markets. From now on the country's business will be subject more to external economic changes than to domestic conditions. Thus, iron and steel manufacturers have brought their costs down to a point competitive with British industry, and are basing their export prices on British prices. Somewhat the same condition prevails in the textile industry and the sugar trade.

CONTINENTAL CONDITIONS AFFECTING THE UNITED KINGDOM EAST COAST DISTRICTS.

Commercial Attaché Walter S. Tower, London, May 22.

East coast sections of Great Britain have felt direct effects of continental conditions since the occupation of the Ruhr probably more than any other part of the country. At first the interference with coal and iron production in continental centers gave a very welcome stimulus to export demand for coal from the eastern fields and to production of pig iron in the Cleveland district. With increased buying, prices rose and business looked good in those lines which are of major importance to the east coast centers of industry and trade.

About that time, too, the placing of new contracts for ships was adding its impetus to activity in this section by giving employment to yards in Newcastle, Sunderland, Leith, etc., most of which had been facing complete idleness if new orders were not speedily forthcoming.

Unfavorable Effects of Recent Developments.

Conditions have changed, however, in more recent months, and the situation is not now regarded so satisfactorily in the larger industrial areas along the east coast.

The stimulus to exports of coal and coke has reacted on prices in a decidedly unfavorable manner for domestic users. This fact is best illustrated by the statement that some operators have been supplying coke to domestic buyers at 15 to 20 shillings a ton under the export price, in order to avoid too great an increase in cost of manufacturing operations at home. But in spite of this practice the general feeling is that fuel at current levels is too high for the good of British industry. Moreover, there are many who think that the recent scale of export activity to continental markets is only temporary, and that after it dies down, the resulting effects, on the coal industry especially, will be worse than ever.

One of the chief causes of concern is the probable effect on the attitude of the coal miners if and when the inevitable price decline again carries wages to the minimum provided for under the national agreement.

Although blast furnaces and steel mill operations were explained in response to diminished competition from continental producers, the result has not been an unmixed blessing. Iron and steel trades have profited from the wider market at more attractive prices, but shipyards have suffered, partly because of inability to secure deliveries on contracts placed with German mills and partly because prices for domestic supplies are higher than the shipbuilders can afford to pay, considering the narrow margin on which contracts for new ships were accepted. The result is that few contracts for ships have been placed lately, owing to inability of builders to quote attractive terms.

Other Difficulties Encountered.

In addition to these difficulties, the lockout of boilermakers is progressively interfering with shipyard work. Some already have been forced to close, others are facing that prospect in the near future. It is estimated that the forced closures of east coast shipyards already reported must have brought the scale of operations down to less than a third of actual capacity. Repair jobs of considerable volume also are being lost to continental yards, on notably lower competitive bids and on better ability to quote definite dates of completing the work.

Summary of Business at the Frankfort Spring Fair.

Ivan Lavretsky, clerk in American consulate general, Frankfort on the Main.

The eighth Frankfort International Fair (April 15–21, 1923), like that of Leipsig, was affected by unfavorable conditions, but the amount of business exceeded all expectations; and, as a whole, this "fair" is stated to have been one of the most successful in Germany this year.

The following is a summary of business so far as has been possible to obtain information in the absence of any official statement on the part of the fair authorities:

Textiles.—As usual in Frankfort, the textile section attracted the greatest number of buyers. The demand for cotton fabrics, shirtings, underwear, and practical, rather than luxurious, articles of clothing, was very heavy, and large turnovers are reported. Business in silks, laces, curtains, and carpets was less satisfactory. Sales were chiefly for the domestic market, the few foreign buyers being Dutch, Swiss, and Scandinavian. Foreign exhibitors, except Austrians, were conspicuously absent.

Leather goods.—There was a brisk inquiry for leather goods, especially for shoes, and a fair amount of business is reported. The call for medium quality leather goods was also lively, while there was less demand for the finer and more expensive qualities.

Machinery.—No great amount of business is reported in machines. Interest in industrial and agricultural machines was keen, but few sales appear to have been concluded. The electrotechnical exhibit was smaller than usual and business was slight.

Bicycles, motorcycles, etc.—There was a satisfactory sale of bicycle and automotive vehicles, particularly motor cycles, and a very good business in automobile and bicycle accessories.

Household articles.—The demand was good for kitchen utensils, but not for porcelain, earthen, and glasswares.

Furniture.—There was little business in furniture in spite of recently reduced prices.

Luxury articles, etc.—Luxury articles, jewelry, industrial art goods, books, and products requiring large capital, according to present market conditions, were not greatly in demand, the general scarcity of money permitting the purchase of the most useful and necessary articles only.

A slight improvement was noticeable in some branches of trade following the unexpected drop in the value of the mark on the third day of the fair, but, generally, business was little influenced. There was a noticeable absence of foreign buyers, especially former French, Belgian, and Dutch customers, and a considerable falling off in foreign sales in consequence. American buyers were also scarce.

As far as exhibits, attendance, and interest were concerned, there was little to distinguish this fair from that of last October or from its predecessors of the last three years.

Favorable Developments in Florence District, Italy.

Consul W. Roderick Dorsey, Florence, May 2.

General conditions in the Florence consular district in the first quarter of 1923 showed a slight improvement over the preceding period. Larger numbers of tourists are arriving, which tends to aid local business and to promote a feeling of optimism. Unemployment has remained below last year's figures and wages continue firm. There have been no strikes of any kind. The cost of living is also steady, with a very slight downward tendency. The index number for the complete budget of a Florentine laborer's family for the last three months of 1922 was 123.5; for the first three months of 1923 it was 120.6 (based on 100 for July, 1920). Business failures have been more numerous than in the same period of 1922, but have been of less importance.

Agricultural conditions have been uniformly favorable. A determination to supply home needs so far as possible with home production, together with favorable weather conditions, has contributed to prospects for good crops. The use of chemical fertilizers among Italian agriculturists is increasing.

Exports Increase—Trade with United States.

The general export demand seems to be improving, and exports to the United States have increased considerably. The year 1922 established a new lira value record for declared exports to the United States from the Florence district, and shipments in the first quarter of 1923 were even greater than the average for 1922. Declared exports in this quarter amounted to $1,779,479, compared with $1,183,283 in the first quarter of 1922. The only two important articles in the list showing decreases were clover seed, exports of which amounted to $175,813 in the first quarter of 1922, and of which there were no exports in 1923, and unbleached straw braids, which were valued at $201,244 and $170,881 in the first quarters of 1922 and 1923, respectively. The cessation of exports of clover seed has been due chiefly to the strong demand from European countries, which has completely exhausted stocks available for export. The decline in exports of straw braid is more than compensated by an increase in shipments of straw hats. The leading increases were in exports of antiquities, cheese, embroideries and laces, raw hemp, and straw hats.

It should be noted that the great improvement shown in conditions in the Florence consular district is not general throughout Italy, as there are many sections of the country where dullness prevails.

Swedish Foreign Trade.

The value of Swedish foreign trade as given in the article in COMMERCE REPORTS, June 11, 1923, page 721—imports at 114,580,000 crowns and exports at 61,618,000

crowns—represents the foreign trade of Sweden during the month of April instead of March. The figures giving the trade of Sweden with the United States for the month of March as 108,770,000 crowns for imports and 60,914,000 crowns for exports represent in reality the total trade of Sweden for that month.

Additional information regarding western Europe appears in this issue under the following sections:

Automotive products:
American accessory makers' share in Spanish market.
American outboard marine motors succeed in British market.
Rubber: Conditions in the Swiss automobile-tire market.
Transportation—shipping: Sale of French Government merchant marine.
Transportation—railways:
Italian railroad concessions.
Swedish locomotives for Argentina.
Transportation—aviation:
Suspension of Manchester–London air service.
Air service between France and Tunisia planned.
Proposed extension of commercial aviation in Germany.
Tariffs and trade regulations:
Customs convention between Belgium and France.
Parcel-post shipments to Austria exempt from import permits.
Relaxation of Italian export restrictions.
Commercial treaty between Czechoslovakia and France prolonged.
Danish ratification of Russian commercial treaty.
Commercial treaty between Czechoslovakia and Lithuania signed.

LATIN AMERICA

Ralph H. Ackerman, Chief, Latin American Division

INDICATIONS OF IMPROVING SITUATION IN BRAZIL.

Based on reports from Commercial Attaché W. L. Schurz and Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.

The figures for the principal Brazilian imports and exports are indicative of the improvement which is gradually taking place in the domestic situation in that country.

During the first nine months of 1922 Brazil imported 14,177 tons of codfish, as compared with 12,622 tons during the same period of 1921. The principal sources of this commodity are Newfoundland and Canada, and the leading ports of import are Recife, Bahia, and Rio de Janeiro.

In 1922 Brazil exported 82,346 tons of yerba maté, as against 71,899 tons in the previous year, the 1922 exports being worth over 10,000,000 milreis more than those of 1921.

It is estimated that Brazil produces some 5,000,000 tons of corn annually. Exports of this commodity are small, the bulk of the crop being consumed locally. During the year 1922 exports were over 50 per cent less than for 1921.

Shipments of frozen meat during the first two months of 1923 were 3,000 tons greater than during the corresponding period of 1922 and the activity of the packing houses is steadily increasing.

Exports of sugar in 1922 were 252,111 tons, as against 172,094 tons in 1921, and for the first two months of 1923 were 7,000 tons larger than for the same period of the previous year.

Exports from the States of Goyaz and Piauhy, Brazil.

Figures have recently been issued which give some idea of the trade of the State of Goyaz—an interior undeveloped State. In 1915 the entire exportation of the State was valued at 5,127,000 milreis. In 1922 the exports over the Goyaz Railroad, which feeds the Mogyana, were valued at 7,787,000 milreis (the rate of exchange for 1915 and for 1922 was 4.288 and 7.74 milreis to the dollar, respectively). The following figures show the total shipments by the Mogyana Railway from the stations of Araguary and Uberabinha, destined for the States of Minas Geraes and Sao Paulo and the Federal capital, and represent the principal products exported from the State of Goyaz during 1922: Rice, 6,338,647 kilos; tobacco, 153,785 kilos; coffee, 838,765 kilos; xarque, 871,501 kilos; beans, 824,901 kilos; cattle, 60,866 head. It is stated that the total number of cattle shipped out of the State is double the figure given here.

According to official figures just published, the principal exports from the State of Piauhy in 1922 through its two outlets—the ports of Amarracao and Totoya at the mouth of the Parnahyba River in the State of Maranhao—were as follows: Babassu nuts, 9,118,753 kilos; raw cotton, 1,180,831 kilos; hides, 1,241,113 kilos; cottonseeds, 1,490,765 kilos; carnauba wax, 1,606,177 kilos; rice, 565,600 kilos. The total exports for 1922 amounted to 17,808,921 kilos, valued at 17,263,267 milreis, as compared with 11,183,878 kilos, valued at 11,719,252 milreis, in 1921. The average for the three years 1920, 1921, and 1922 was 13,038,218 kilos, valued at 15,477,939 milreis.

Superior Council of Commerce and Industry Formed.

The Superior Council of Commerce and Industry was created by a decree of April 11, 1923, to serve as an advisory board to the Brazilian Government in commercial and industrial matters. The council will be subordinated to the Ministry of Agriculture, Industry, and Commerce, and will be composed of 36 members, including the Director General of Industry and Commerce, the Director General of Statistics, the Director of the Information Bureau, the Federal Inspector of Railways, the Director General of Commercial and Consular Affairs of the Ministry of Foreign Affairs, the President of the Board of Commerce, and a committee of brokers.

Besides studying questions relative to commerce and national industries the Superior Council will concern itself with new markets and the development of existing commercial relations; commercial inquiries; taxes, railway and customhouse tariffs; land, sea, and river transportation and freight rates; navigation and port management; produce and shipping exchanges; banks; emission of bonds and credit notes; money circulation; private associations and mutual-aid societies; drawbacks and warrants; propaganda within and without the country; commercial and industrial statistics; marine and fire insurance; the development of industries, large and small; expositions and national and inter-

national fairs; economic congresses; industrial properties; and commercial and industrial technical education. The council may, of its own accord, advise public authorities of any measure it may deem advantageous to the country's commercial, economic, and industrial prosperity.

National Labor Council Authorized.

The formation of a National Labor Council has been authorized by a recent decree. The purpose of this organization will be to study the labor and social systems, including the normal workday in the principal lines of industry, methods of remunerating labor, collective labor contracts, methods of conciliation and arbitration with particular reference to the prevention of strikes, the work of women and children, apprenticeship and technical education, social insurance, labor accidents, lodging and pensions for railroad employees, institutions of popular credit, and farm credit banks.

The council is to be composed of 12 members chosen by the President of the Republic. These 12 members are to be as follows: Two laborers, two employers, two high officials of the Ministry of Agriculture, Industry, and Commerce, and six persons of recognized ability in matters pertaining to labor subjects. The Minister of Agriculture, Industry, and Commerce will be the honorary president, while a secretary will be selected to do the secretarial work. All the members will serve without pay, except the secretary. Meetings will be held twice monthly and the council will publish a review containing articles of interest on labor subjects written by its members, as well as the decisions of the council.

Developments in Ecuador During May.

Cable from Consul General E. W. Goding, Guayaquil, June 2.

Notwithstanding an increase in the quantity of cacao exported from Ecuador during the month of May over that reported in April, freight rates dropped to a little more than half of the rates reported earlier in the year. Exports of cacao for the month of May amounted to 5,000,000 kilos, as compared with 2,727,272 kilos during the first 24 days of April, while stocks on hand were reduced to 900,000 kilos at the end of May. Freight rates have fallen from $15 to $8 per ton to the United States and from 80s. to 55s. to Europe. The approaching close of the cacao-export season, as well as that of other west-coast products, and the increasing tonnage available on this route are undoubtedly causes of the decline.

The cacao market remained active during the past month, the price during that period averaging 27 sucres per Spanish quintal of 46 kilos. This is a decline of between 1 and 2 sucres since April, which has been caused by a deterioration in quality, brought about by unfavorable atmospheric conditions. Receipts so far this year have been 4,000 tons less than in 1922.

The quantity of Panama hats shipped during May was 8,700 kilos, as compared with 8,000 kilos during the first 24 days in April. Prices on these hats have remained stationary for the past three months. Likewise the prevailing prices on hides, skins, and coffee have remained unchanged.

Foreign Trade and Exchange.

Imports during May exceeded exports by approximately 50 per cent. Payment for these imports is being delayed by a shortage of drafts and until the situation is relieved it would be well for American exporters to fill orders only when accompanied by a draft.

The official rate of exchange remains fixed at 3.20 sucres to the dollar, but some street transactions are being carried on at a rate of 4.80, so eager are importers to secure drafts and maintain their credit abroad by prompt payments.

Construction Work Active—New Oil Well Sunk.

Building and construction work is active at the present time and numerous cement buildings are projected.

A newly sunk petroleum well is now producing at the rate of 250 barrels a day, while the monthly production of drilled wells in this country stands around 15,000 barrels at the present time.

Rise in Cost of Living.

The cost of living in Ecuador continues to rise more or less in proportion to the unfavorable rate of exchange being offered on the street. This rate appears at the present time to exert a determining effect on prices.

Economic Conditions in Panama.

Consul George Orr, Panama City, May 12.

The expansion of purchases by local merchants of Panama to replenish low consumption stocks, carried until recently, will probably continue through June. A decrease in orders is expected from then until December, when stocks will be built up in anticipation of the next season. The tourist trade, just completed, was unusually profitable, and money is more plentiful than it has been for some time. The increase from this source is very acceptable, as the past few years have not been prosperous for local business houses on account of the contraction caused by reductions in the number of canal employees. Fortunately there have been few failures, but a number of voluntary liquidations have been made by individuals and firms who found they were operating without profit.

Imports for April dropped in quantity and value somewhat below those for March, although still in excess of receipts during the first two months of the year. April exports from Colon and Panama City were also slightly under March values.

Panama City has contracted for certain suburban street repairs and the National Government has ordered some small rice cleaning machinery in line with its policy of encouraging agricultural development.

New regulations relative to petroleum concessions were authorized by an act of April 6, 1923. One oil company has reached a depth of about 3,500 feet in a well being drilled near the Pacific coast of the Darien country, and another company has received permission to drill in other sections of the Republic.

Costa Rica Quiet—Trade Season Begins.

Consul Henry S. Waterman, San Jose, May 12.

Practically all the coffee crop has been shipped and returns received, so that Costa Rica is now about to enter the quiet commercial period of the year. As is usual at this time the planters are taking their vacations and travel is increasing. Merchants continue to import in limited quantities and report a fair business so far this year. Announcement of the presidential

candidates for the December elections had no adverse effect as none of them advocate any changes of commercial importance.

Exchange rates for April averaged 4.47 colones to the dollar, against 4.52 for March and 4.31 for April, 1922. The fluctuation was small and demand limited, foreign accounts being paid against gold coffee drafts.

Coffee exports for the season are given as 154,440 sacks, and it is estimated there are only about 2,000 bags awaiting shipment. This indicates total exports of the present crop as nearly 24,000,000 pounds, compared with approximately 40,000,000 pounds last season. This exceeds early estimates, partly because predictions were pessimistic and partly because the high grade of this year's beans resulted in a greater weight of clean coffee. Up to April 30 the United States took 52,344 sacks, most of which went to San Francisco; Europe (chiefly to London) 101,750 sacks, and 346 bags were scattered. Prospects for the 1923-24 crops are attractive, but it will be early in June before approximately accurate predictions can be made.

Dividends of Argentine Manufacturing Industries.

Trade Commissioner George S. Brady, Buenos Aires, May 10.

Argentine industrials in general have improved steadily since the beginning of last year. Annual reports covering the year 1922 show good dividends, and there is a feeling of increased confidence. The dairy-products industry is looking forward to a period of great development. Several of the leading companies in this business have declared dividends of 10 per cent or more. The paper mill and match factory, Cia. General de Fosforos, has declared an interim dividend of 5 per cent. The Argentine Sugar Co. paid 10 per cent on its stock for the year 1922, and the alcohol distillery, El Globo, has declared an interim dividend of 7 per cent. The biscuit factory, M. S. Bagley y Cia., paid last August a 10 per cent dividend on its common stock. The drop in the prices of meats was somewhat offset by the volume of business done by the packing houses during 1922 and the annual reports of these companies are fairly optimistic. Two of these plants have declared dividends of 14 per cent and 15 per cent, respectively. Argentine industrial revenue receipts are also increasing, those for the first four months of 1923 having amounted to 32,891,628 pesos, or an increase of 12 per cent over the total for the same period of last year.

Drought Threatens Crops in Dutch West Indies.

Consul B. S. Rairden, Curacao, April 29.

A severe drought in the Dutch West Indies, which began in the first quarter of this year, threatens to result seriously for the agriculture of the islands. Information received from unofficial sources discloses the fact that almost no rain fell during the first three months of 1923 in Curacao, Aruba, and Bonaire. Rainfall as registered amounted to 0.881 inch, while the railfall for the corresponding period of 1922 was 1.66 inches.

As a result of the absence of sufficient rainfall there has been no activity in cultivation, and last year's crops are gradually being exhausted. With the exception of aloe and divi-divi, none of the crops are expected to yield for several months.

Foreign Trade of Dutch Guiana in 1922.

Consular Agent James S. Lawton, Paramaribo.

The foreign trade of Dutch Guiana for 1922 registered a decrease of $1,892,500 from the 1921 total, amounting in 1922 to $5,991,500 and in 1921 to $7,884,000. Imports during 1922 were valued at $3,894,400 and exports at $2,097,100, making an unfavorable trade balance of $1,797,313. This unfavorable trade balance was considerably less than that of 1921, when imports valued at $5,260,000, and exports amounting to $2,624,000, left a deficit of $2,636,000. Computed on the basis of the present estimated population of 100,000, the per capita purchases of foreign goods in 1922 were slightly less than $39, while in 1921 they were over $52.

The leading imports were provisions, hardware, clothing, and manufactured articles. Exports consisted chiefly of sugar, coffee, cacao, rum, molasses, timber, balata, gold, and bauxite.

Current credit terms are sight draft with shipping documents attached, but to well-known firms more liberal terms, such as from 20 to 90 days' credit, are sometimes granted.

Dominican Revenues Continue to Increase.

Minister William W. Russell, Santo Domingo, May 8.

The revenues of the Dominican Republic continued to increase during April over receipts during the previous months. The total revenue collected in April was $431,500—an increase of $40,237 over March collections, which amounted to $391,263. March collections exceeded those for February by $5,296. Both customs and internal-revenue collections increased in April, whereas in March internal revenue alone registered an increase. Internal revenue collected during April reached $170,358, compared with $159,672 in March. Customs receipts during April were $261,142, compared with $231,591 in March.

Argentine Trade Figures for 1921.

Cable from Commercial Attaché Edward F. Feely, Buenos Aires, June 5.

It has been officially announced that Argentine imports for the year 1921 amounted to 640,000,000 gold pesos and that exports amounted to 670,000,000 gold pesos. Figures for 1920 were 935,000,000 pesos and 1,044,000,000 pesos, respectively, and for 1919, 656,000,000 pesos and 1,031,000,000 pesos.

Additional information regarding Latin America appears in this issue under the following sections:

Automotive products: "Transportation engineer" needed to sell trucks in Brazil.
Transportation—shipping: Packing for lowest customs charges in Brazil.
Transportation—railways: Swedish locomotives for Argentina.
Tariffs and trade regulations:
Changes in Argentine export duties for June.
General increase in Colombian import duties.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

FOREIGN TRADE REGULATIONS OF SOVIET RUSSIA.

Abstracted from the soviet official Russian Information and Review, London, March 10 and May 5.

While the central organ for the conduct of governmental foreign trade in Soviet Russia is the Commissariat for Foreign Trade, direct purchases abroad are allowed to be made in a few cases by the Vneshtorg, certain other Government departments, and so-called "trusts" (industrial concerns wholly owned by and responsible to the Government).

Import Trade Concentrated in State Institutions.

The extent to which the actual import operations are concentrated in the hands of the Vneshtorg and other State institutions is illustrated by the figures of import licenses issued by the Vneshtorg to Russian importers other than itself, as compared with the total volume of imports. The following licenses were issued for the nine months, March 1 to December 1, 1922. "State bodies" are understood to cover governmental trusts and other State industrial combines, not including the Vneshtorg itself.

Commodity group.	State bodies.	Cooperative societies.	Private persons.	Total.
	Long tons.	*Long tons.*	*Long tons.*	*Long tons.*
Foodstuffs	21,430	34,780	990	57,200
Articles of general consumption	30	.....	90	120
Raw materials and partial manufactures	10,870	1,170	2,050	14,090
Machinery	1,490	580	150	2,220
Total imports licensed	33,820	36,530	3,280	73,630

Thus, the total volume of imports licensed from March 1 to December 1 was equal to 73,630 tons, of which only 3,280 tons covered licenses issued to private concerns. The total imports into Russia during the same period amounted to 1,923,155 tons (exclusive of famine relief supplies), thus showing that the great bulk of importation is carried on directly by the Commissariat for Foreign Trade.

State Organizations Empowered to Trade Abroad.

The following State economic associations have the right to engage in export and import trade in foreign markets:

Export of timber.—The Timber Trust Bureau, with its center in London and agencies in Germany and Latvia, consists of representatives of the most important timber-exporting organizations, with representatives of the Commissariat for Foreign Trade. At the same time the larger timber exporting trusts, which have been empowered to transact business on their own account, retain this right and need not deal through the bureau.

Export of oil.—The Oil Syndicate has its center in Berlin and departments in London and Constantinople. Other representative agencies may be opened by agreement between the Commissariat for Foreign Trade and the syndicate.

Export of flax, hemp, tow, etc.—The Bureau for the Sale of Flax, with its departments or agencies in London, Berlin, and Riga, consists of representatives of the State Training Agency (Gostorg), the Flax Trading Agency (Lnotorg), the Centrosoyus, the Central Flax Department (Lnocentre), and the "Khlebprodukt," under the chairmanship of a representative of the Commissariat for Foreign Trade. All other State organs which have flax to export must do so through one of the organs represented in this bureau.

Textiles.—The Textile Syndicate may import and export textile goods.

Import of coal.—The Central Department for the Coal Industry of the Donetz has agencies in Berlin and London.

Import of oil.—Aznepht and Groznepht (Azerbaijan and Grozny petroleum boards) have departments in Berlin and London.

Imports of tea and coffee.—The Tea Board controls this trade.

Leather.—The Leather Syndicate may export or import its goods other than furs and bristles. For the export and necessary preparation for export of furs, the Council of Labor and Defense has instructed the Commissariat for Foreign Trade to create a special organization.

Rubber, etc.—The Rubber Trust exports and imports rubber and asbestos.

General.—The State Universal Stores imports and exports general merchandise, mainly for consumption; the Khlebprodukt exports raw materials, etc.; the State Medical Trading Board (Commissariat for Health) imports and exports medical supplies, and has a department in Berlin. The Economic Conferences of the Ukraine, White Russia, the Caucasian Federation, the Urals, Siberia, the southeast, the northwest, and Moscow work through the representatives of the Commissariat for Foreign Trade on their administrative boards and have the right to appoint their representatives to the respective trade delegation.

With the exception of the Centrosoyus and the Selskosoyus (Agricultural Cooperative Union), which retain the right to export or import goods in accordance with the decree of March 12, 1922, no institution other than those enumerated above may engage in independent import or export trade. The authorized trade institutions of the Union of Socialist Soviet Republics abroad are the trade delegations of the Union.

Violators of Foreign-Trade Laws Prosecuted.

According to the official Economic Life, Moscow, April 3, 1923, the Commissariat for Foreign Trade has instructed the attorney general of the Soviet Republic to institute proceedings under the Soviet Criminal Code against the representative of the central coal administration of the Donetz Basin for having concluded a contract with a representative of an American machinery firm for the supply and delivery from the United States of coal-mining machinery and equipment to the amount of $210,450, without the authority of the commissariat. The terms of the contract provided for two-thirds of the value of the order to be paid by the coal administration in advance. The American representative likewise is to be prosecuted.

FOREIGN TRADE OF LATVIA DURING 1922.

Consul John P. Hurley, Riga.

Improved economic conditions in Latvia are reflected by the official trade returns for 1922. Imports exceeded exports by only $3,364,000 (approximate, at the average exchange rate for the year of 258 Latvian rubles per dollar). This compares with the unfavorable balance of $8,356,000 (at the average exchange rate of 342.5 Latvian rubles per dollar) for 1921. Both imports and exports of 1922 indicated a great increase over the preceding year, imports increasing by approximately $6,603,000 and exports by $11,148,000—more than double.

Latvian foreign trade during 1921 and 1922.

Items.	Weight, in metric tons.		Value.	
	1921	1922	1921	1922
Imports	150,134	382,230	$14,120,000	[1] $20,723,000
Exports	190,671	525,653	5,764,000	16,912,000

[1] Including 14,324 head of cattle, fowl, etc., valued at $586,746.

Character of Trade.

For the first six months of the year the surplus of imports was considerable, owing principally to the usual winter slump in Latvian trade; but the ratio between exports and imports indicated marked improvement in comparison with the first-half of 1921. During the last half of 1922 heavy exportation of raw materials and semimanufactures, particularly timber and textiles, was accompanied by a considerable decrease in imports.

The principal exports were raw materials and semimanufactured products, which included textiles (especially flax), valued at $3,169,000; timber, $6,026,000; linseed, clover seed, vetch, etc., $1,093,000, food stuffs (particularly butter and oats), $2,311,000. The chief imports were textile manufactures, valued at $3,624,484; metals, $2,230,126; and food stuffs (consisting chiefly of sugar, wheat grain, and wheat flour), $5,544,000. Imports from the United States amounted to $6,804,000, and exports to $853,781. Goods carried in transit through Latvia reached 387,000 metric tons.

Butter Export.

The export of dairy products indicated a large increase over 1921, as a result of efforts to revive this industry to former dimensions. The total export of butter during 1922 reached an approximate value of 140,000,000 Latvian rubles, against only 2,000,000 rubles in 1921. The growth has continued during the current year, January exports amounting to 283,648 pounds, February to 332,288, and March to 434,329. The number of dairies has increased threefold since December, 1922, and it is reported that an average of approximately 500,000 pounds of butter will be available for export during 1923.

BALKANS AND LEVANT.

THE TRADE OF ITALIAN COLONIES IN AFRICA.

Consul H. Earle Russell, Rome, Italy, April 9.

The Italian colonies in Africa comprise Libia—composed of Tripolitania and Cirenaica—on the Mediterranean, Eritrea on the lower Red Sea, and Italian Somaliland on the Indian Ocean. As avenues of trade to and from the interior of northern and eastern Africa, their growing importance is attested by the increasing value of their post-war trade, even after allowing for decreased exchange value of the lira.

Development within these colonies is encouraged, in the case of Libia and the Somaliland, by exempting from import duties all construction materials, as well as machinery and implements that aid agriculture and the working of native raw materials; in Libia, these exemptions include also coal and mineral oils, as well as seeds for planting and other agricultural supplies. In Eritrea, all Italian goods enter free of duty. Exports are exempt from duty in Tripolitania, except in the cases of sheep, cattle, camels, horses, tuna fish, sponges, alfa, esparto goods, and henna; in Eritrea, except on mother-of-pearl and wild animals; and in the Somaliland, except on oxen, gums, camel fat, and dried hides and skins.

In Tripolitania, a corporate organization exists for the carrying on, in Tripoli, of such particularly native trades as weaving of goat-hair cloth, embroidery in silk and silver, gold and silver smithing, saddlery, tanning, sieve making, etc., and of matting making in Misurata. In Cirenaica, a school of arts and trades, established in 1910, trains labor necessary for the local industries of a mechanical nature.

In the succeeding tables, data for 1922 were not given because not available. Conversions from lire to dollars were made as stated in the footnote to the first table.

Tripolitan Trade.

The foreign trade of Tripolitania may be classed under two heads—caravan and sea trade. Long before the Italian occupation, the caravan trade was very important; but of late years it has been diminished by the French occupation of Timbuctoo and by the building of the Kano-Lagos Railway in British Nigeria.

Imports by sea include wines and liquors, Italian and Cretan oils, colonial goods, sweetmeats, chemical products and medicines, resin, perfumes, cotton, woolen and silk yarn and textiles, paper, iron and steel manufactures, glassware, rubber goods, cereals, flour, food pastes, preserved foods, and tobacco and matches—the latter two furnished by the Italian Government monopolies.

The exports by sea from Tripolitania consist principally of henna, wool in the grease, silk, wool and cotton barracans, woolen rugs, raw sponges, ostrich feathers, potatoes, dates, alfa, matting, fats, honey, beeswax, and hides of camels, oxen, sheep, and goats.

Foreign trade of Tripolitania during 1918–1921.

Years.	Imports.		Exports.	
	Lire.	Dollars.[1]	Lire.	Dollars.[1]
1918	60,253,787	8,074,000	4,425,873	593,000
1919	77,598,996	8,846,000	4,814,462	549,000
1920	111,481,055	5,574,000	13,952,166	698,000
1921	116,472,255	5,008,000	17,251,320	741,000

[1] Conversions made in accordance with the average exchange value of the lira, as follows: For 1918, $0.134; for 1919, $0.114; for 1920, $0.05; and for 1921, $0.043.

The caravan trade of Tripoli is largely Sudanese. The principal exports into Sudan are cotton and woolen goods, blankets, rugs, silk handkerchiefs, coral goods, tea, coffee, sugar, mirrors, paper, and coloring materials. The merchandise brought from the interior consists mainly of ivory, ostrich feathers, hides and skins, leather objects, and Sudanese textiles.

Trade of Cirenaica.

The foreign trade of Cirenaica, like that of Tripolitania, is both seaborne and caravan. The caravan trade has two principal routes—along the coast from Derua to Tebruk, and from Bengasi south into the "wady" region. The latter, a difficult one consuming 68 days, was formerly the principal highway for the exchange of European and Sudanese goods, but much of this traffic is now absorbed by the Egyptian railway from Khartum. The articles entering into the caravan trade are practically the same as for similar trade in Tripolitania.

Imports into Cirenaica by sea consist chiefly of sugar, tea, coffee, wines, and other alcoholic beverages, Italian and Cretan oils, colonial goods, sweetmeats, chemical products and medicines, perfumes, yarn and manufactures of cotton, wool, and silk, paper, iron and steel goods, vehicles, enameled iron goods, rubber goods, cereals, flour, food pastes, preserved food products, and tobacco and matches from the Italian Government monopolies.

Exports by sea are mainly barley, corn, raw sponges, dried, smoked, and fresh hides of oxen and sheep, raw wool, matting, fats, and salt.

Customs regulations and rates are the same as for Tripolitania.

Foreign trade of Cirenaica during 1918–1921.

Years.	Imports.		Exports.	
	Lire.	Dollars.[1]	Lire.	Dollars.[1]
1918	38,231,262	5,122,989	3,061,869	412,970
1919	44,523,877	5,075,722	5,691,617	648,844
1920	44,685,697	2,234,285	[2] 49,145,316	2,457,266
1921	50,807,000	2,184,701	17,100,000	735,300

[1] Conversions at the same rates as in the table for Tripoli tan trade.
[2] Includes about 41,000,000 lire ($2,050,000) in barley and corn exported to Italy and other countries, which had been kept in Cirenaica by war-time restrictions.

Agriculture is the principal industry, and cereals (especially barley) are the most important product. Sheep raising, the chief branch of stock raising, is mainly for wool; but washing and cleaning of wool is little developed. Date growing and tunny fishing are less important than in Tripolitania, but sponge fishing is much more important, yielding a return in 1920 of 20,000,000 lire ($1,000,000).

Trade of Italian Somaliland.

The principal seaborne imports into Italian Somaliland are cotton and woolen yarn, textiles, coffee, petroleum, rice, tobacco, sugar, fats, soap, cereals, flour, and preserved products.

The seaborne exports consist largely of cattle hides, sheepskins, raw cotton, amber, ivory, myrrh, rubber, sheep and goats, native butter, and textiles. The last two items are for the countries of the South African coast, for Aden, and Zanzibar.

Foreign trade of Italian Somaliland during 1918–1921.

Years.	Imports.		Exports.	
	Lire.	Dollars.[1]	Lire.	Dollars.[1]
1918	[2] 14,887,655	1,994,000	6,245,498	837,000
1919	[2] 15,474,816	1,764,000	7,556,846	861,000
1920	[2] 39,411,271	1,970,000	17,000,000	850,000
1921	[2] 71,112,001	3,058,000	12,129,065	522,000

[1] Conversions at same rates as in the table for Tripolitan trade.
[2] Including duty-free materials in the following values: In 1918, 1,068,285 lire ($135,110); in 1919, 1,716,115 ($195,637); in 1920, 1,963,882 lire ($548,194); in 1921, 16,549,808 lire ($797,642).

The most conspicuous industry is stock raising, in which fully one-half of the population is engaged. The census of February, 1920, showed in the district of Benadir alone (the only figures available), 2,101,178 camels, 1,246,461 cattle, and 1,566,308 sheep.

Trade of Eritrea.

The foreign trade of Eritrea across its land frontiers in 1921, principally with Abyssinia, reached $1,112,618 in imports and $1,132,840 in exports. The imports from the hinterland consisted chiefly of dry hides, corn, oil seeds, butter, coffee, and live animals. Exports to those regions consisted mainly of cotton yarn and textiles of foreign and Italian manufacture, hardware, spirits, glassware, petroleum, iron and steel goods.

The sea-borne import trade of Eritrea consists chiefly of wines, cotton yarn and manufactures, mineral oils, cement, sugar, coffee, rice, meal, preserved food products, iron and steel manufactures, fats, soap, and tobacco.

The export trade by sea consists mainly of dried hides, palm-nut seeds, tinned meats, salt, mother-of-pearl, conch shells, pearls, tortoise shell, flaxseed, rubber, tanning materials, and potash—the latter from the mines of Dallel in Abyssinia.

Foreign trade of Eritrea during 1918–1921.

Years.	Imports.		Exports.	
	Lire.	Dollars.[1]	Lire.	Dollars.[1]
1918	102,811,379	3,911,000	84,844,958	11,369,000
1919	80,000,000	9,120,000	41,000,000	4,674,000
1920	145,000,000	7,250,000	47,000,000	2,350,000
1921	110,000,000	4,730,000	28,000,000	1,204,000

[1] Conversions at same rate as in table for Tripolitan trade.

It must be borne in mind that, as regards both import and export sea-borne trade of Italian Somaliland and Eritrea, some of the articles are reexports from Italy and from the interior. By far the greater part of this reexport and transit trade is Abyssinian, just as a considerable amount of Libian transit trade is Sudanese.

Additional information regarding eastern Europe appears in this issue under the following sections:

Transportation—aviation: Air service between France and Tunisia planned.
Tariffs and trade regulations: Surtax on goods imported through Piræus, Greece.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

AUSTRALIAN MARKET CONDITIONS.

Consul Romeyn Wormuth, Sydney.

Several features of the Australian situation combine to justify the belief that 1923 will be a prosperous trade year. Wool is bringing excellent prices and indications are favorable for their continuance. Improvement is expected in the meat industry. The export of metals is increasing. It is believed that money will be easier and that interest rates will be reduced during the year.

The United States occupies a favorable position in Australian trade. This is especially noticeable in the case of machinery and automotive vehicles, notwithstanding tariff handicaps, and similarly, but to a less degree, as regards agricultural implements. The year 1922 was a banner one for American automobiles. The United States holds first place in Australian imports of hardware, miscellaneous iron stores, and surgical, scientific, and musical instruments, and second place in iron and steel imports, although with the Newcastle Steel Works again in operation the importation of these commodities may register more or less of a decline. Other import lines in which the United States holds a strong position are linoleum and oilcloth, patent and enameled leather, and arms and ammunition. Over 90 per cent of the motion-picture films shown in Australia are imported from the United States.

The two dangers threatening Australia are labor disturbances and continued drought. The refusal of labor to accept a reduction in wages to meet changed conditions is the outstanding feature of the labor situation. Coal operators claim that lowered labor costs are essential to a readjustment of the coal industry and the attempt to force this reduction is reported as likely to lead to a bitter struggle between operators and miners.

Economic Effects of the Sukkur Barrage.

Trade Commissioner C. C. Batchelder, May 28.

The recent sanction in London, by the Secretary of State for India, of the Sukkur Barrage—one of the most important irrigation schemes in the world—will require the flotation of loans aggregating $50,000,000. It is planned to begin construction as soon as financial arrangements can be made. Not only will a barrage be erected across the Indus at Sukkur, but an extensive system of canals on both banks will provide perennial irrigation for the districts now supplied with water only during the flood season and for much larger areas with an annual rainfall of less than 5 inches now practically arid.

It is estimated that during the next 10 years the cotton acreage in the Punjab will be at least trebled. The districts affected are now free from the boll weevil and special attention will be paid to the cultivation of American, Egyptian, and other superior varieties of long-stapled cotton.

Between 2,000,000 and 3,000,000 acres also will be added to the wheat-producing area. Conditions are especially suited to the cultivation of this staple crop, which now finds a ready export market in the neighboring port of Karachi.

Notwithstanding the fact that India is reported as ranking second among the countries of the world in acreage devoted to sugar cane, it is still one of the great sugar-importing countries on account of the primitive agricultural and manufacturing methods employed. Only a few large-scale, modern sugar mills have been successful, due to the impossibility of purchasing sufficiently large estates and the unwillingness of the cultivators to deliver regular supplies of cane. Therefore plans are under consideration to erect sugar centrals in this reclaimed territory in close proximity to adequate plantations of cane. Moreover, the consequent decrease anticipated in importations of sugar from Java is expected to decrease the remittances from India to other countries.

The government of Bombay Province, which includes the Sind, has made plans for the most efficient use of the land, a large part of which will be sold instead of leased. There will also be additional charges for the use of water, as well as land and other taxes. It is proposed to make sales before the water actually is available and apply the proceeds in part payment on the expenses of construction.

The irrigated land will be offered first to the inhabitants of Sind, where the barrage is located, but purchases are anticipated among cultivators from the neighboring Punjab, who are familiar with the benefits of perennial irrigation necessary in this region for the cultivation of sugar, cotton, wheat, and other more profitable crops. While an effort will be made to settle peasant proprietors on certain tracts, it has been decided to sell or lease large estates to be worked by tractors and other agricultural machinery in order to reduce production costs.

Construction Work in Bombay.

Consul T. M. Wilson, Bombay.

The opening of the new cotton depot at Mazagon, Bombay, on March 13, 1923, provides that port for the first time with adequate modern equipment for handling cotton within easy reach of the docks and with modern railway communication with the long-distance terminals and industrial section of the island of Bombay. The depot was constructed at a cost of 16,300,000 rupees ($5,216,000) on a section of the land reclaimed by the Bombay Port Trust, which increased the area of the island by 4½ per cent. The importance of its relation to the milling interests, as well as commerce, will be readily comprehended by the fact that raw cotton and cotton products in 1921–22 constituted practically 75 per cent of the total exports of Bombay, while the mills consumed approximately 429,679,000 pounds of cotton (1,074,198 bales of 400 pounds each) the same year. Already the 178 godowns erected previous to the opening are proving insufficient for the demand and plans are being formulated for the construction of additional ones.

Other plans for utilizing this reclaimed area will provide depots for grain, seeds, iron, coal, hay, bricks,

and firewood, in addition to railway and government store yards. Land has also been placed at the disposal of the authorities for building tenements for laborers connected directly with the depots.

Another scheme which has grown out of this general development of Bombay and is directly connected with the interests of both mill owners and mill workers is the erection of large numbers of tenement houses. Since the possibility of excessive rentals developed objections from the natives to the new quarters, the municipal authorities have decided to reduce the monthly rent from 14½ rupees to 10 rupees, the difference to be paid by contributions from the cotton cess tax. This cotton cess was instituted by the government of Bombay for the purpose of furnishing a reserve fund to make good any losses resulting from development and municipal work. The tax is not connected with the Cess Bill, passed by the Indian Legislative Assembly for the improvement and grading of cotton.

Improvement of Tuticorin Harbor, India.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta.

The government of Madras has sanctioned the construction of a deep-water harbor at Tuticorin (the most southern port of India), the plan for which has been under consideration for a number of years as being essential to the development of trade. The increased tonnage thus rendered possible will finance the project when once it is under way. The Port Conservancy Board already has 300,000 rupees to its credit and the harbor engineer has assured the authorities in charge that the cost will not exceed 4,000,000 rupees. The government proposes to have the prepayment of the loan raised for this purpose spread over a term of 30 years, to have the project completed in 5 years, and to make the tonnage rate of dues about 1 rupee.

Japanese Trade and Economic Notes.

Population of Tokyo Shows Increase.

The population of Tokyo showed a slight increase during 1922, according to a census taken by the Home Department. At the end of the year the population totaled 2,478,233 and included 641,293 families. These figures represent an increase of 40,730 persons and 2,828 households, as compared with the end of the preceding year.

Japan's Exports to Siberia Show Decline.

According to a report of the finance department, Japan's exports to Siberia during the first quarter of 1923 amounted to 492,341 yen (1 yen=$0.4985), as compared with 1,660,998 yen during the same period last year, while imports from Siberia increased from 891,461 yen during the first three months of 1921 to 957,306 yen during the same period of this year.

Bills Cleared in Tokyo Show Increase.

Bills cleared in Tokyo during April totaled 2,517,327, with a value of 6,132,180,227 yen, according to a report of the Tokyo Bankers' Clearing House. Compared with the same month of 1922 there was an increase of 123,756 in the number of bills and 295,381,812 yen in value. The number of bills cleared by this house during the first four months of this year show an increase of 279,144 in number and 228,716,492 yen in value.

Japanese Business urged to be Conservative.

The Japanese Minister of Finance, in an address before the annual meeting of bankers at Tokyo, pointed out that Japan is passing through a period of false prosperity which is only temporary and urged conservatism to prevent conditions from growing worse. He recommended that all banking institutions which are in a weakened condition should form combines in order to strengthen their positions. Stress was also laid on the importance of regarding the present business prosperity as being built in an artificial basis. It was pointed out that Japan has not made the progress in readjustment since the war period that has been effected in America and England, although the contrary belief is prevalent in business circles.

Yokohama Is Planning New Municipal Bank.

The city authorities of Yokohama are planning to establish a municipal cooperative savings bank which will be operated for the benefit of the small depositor. At present the laws of the country prohibit a city from establishing a bank, but efforts are being made to have this regulation modified, and it is reported that the central Government is favorable to such a move. A general banking business is to be carried on by this institution and current accounts, time deposits and special long-time deposits will be available to those who wish such services. Several large cities are said to be planning similar banks and it is thought that such institutions will be of much value to workingmen who have small amounts of money which they can deposit and on which they can receive fair rates of interest. All profits will be divided among the depositors. (Japan Advertiser, Tokyo.)

Tokyo Bank Clearances Smaller During April.

Bank clearances during April were much smaller in Tokyo than during the preceding month and reflect the recent tightness in the Japanese money market. According to the Tokyo Bankers' Clearing House, 1,078,162 bills, valued at 3,077,456,545 yen (1 yen=$0.4985) were cleared during April. Compared with March this is a decrease of 16,468 in the number of bills cleared and 139,509,521 yen in their value; but when compared with clearances during April, 1922, it is an increase of 64,718 bills and 268,111,545 yen.

The first four months of 1923 show a gain, however, when compared with the same period of last year. The number of bills cleared up to the end of April this year aggregated 4,019,373—an increase of 141,832, as compared with the same period last year—while their value reached 11,130,486,573 yen, which is an increase of 540,985,389 yen, as compared with the first four months of last year.

The number of bills dishonored during April reached 104—an increase of 3 over March.

Annual Market Fair at Soerabaya, Java.

Consul Parker W. Buhrman, Soerabaya.

The date of the first annual Soerabaya market fair has been tentatively set for June, 1924. This decision is a result of negotiations between the Bandoeng Fair Association and Soerabaya Market Fair Association relative to transferring the annual Netherlands Indian Fair from Bandoeng, in the interior of Java, to Soerabaya, which is growing in commercial importance. The

Soerabaya association will limit its activities during the current year to the usual native fair which will be held in September, 1923.

Industrial Expansion in Tasmania.

Tasmania has made remarkable progress as a manufacturing state during the past two or three years. In 1919–20 there were 559 registered factories in the State. In 1920–21 the number has increased to 662. Recently an important addition was made by the establishment of woolen mills (an offshoot of an English firm) at Launceston. Still further expansion will occur when spinning mills which are being erected also at Launceston are ready to begin operations. It is expected that these mills will be running by the end of the present year. (Manchester Guardian Commercial, March 29.)

Additional information regarding the Far East appears in this issue under the following section:

Transportation—railways: State management for Indian railways.

AFRICA

Alan G. Goldsmith, Chief, Western European Division

South African Wholesale Price Indexes.

Consul Charles J. Pisar, Cape Town.

The wholesale price index number for January, 1923, in South Africa, was 1,470 as compared with an average of 1,445 for 1922. In comparison with the average for the year 1922, an upward movement occurred in South African domestic goods generally, but a marked decline was noted in the case of imported goods.

The following table, compiled by the director of the census, gives the wholesale price index numbers by groups for 1920 to 1923. These numbers are based on 1,000 for 1910.

Index numbers of wholesale prices in South Africa.

Groups.	1920	1921	1922	January, 1923.
Metals	3,339	2,607	1,651	1,537
Jute, leather, hides, and skins	2,705	1,649	1,411	1,468
Grains, meal, etc	2,693	1,472	1,262	1,439
Dairy produce	2,023	1,589	1,209	1,099
Groceries	1,901	1,728	1,322	1,386
Meat	2,116	1,638	1,362	1,428
Building materials	2,445	2,082	1,630	1,509
Chemicals	1,271	1,261	1,178	1,132
Fuel and light	1,658	1,743	1,454	1,285
Soft goods [1]	4,418	3,324	2,361	2,295
Miscellaneous	3,174	2,899	2,029	1,722
Average, all groups	2,512	1,905	1,445	1,470
South African goods	2,249	1,527	1,277	1,345
Imported goods	3,135	2,501	1,870	1,790

[1] As consumption of articles included in this group can not be estimated, index figures for this group have been arrived at by taking the arithmetical average of the index figures for individual commodities.

Interior Trade of Liberia Opened to Foreigners.

Consul General Solomon Porter Hood, Monrovia, Liberia, April 14.

A proclamation has been issued by the President of the African Republic of Liberia, dated at Monrovia, March 15, 1923, opening certain interior areas of the country to foreign traders for purposes of developing commerce and increasing revenues. According to an act of the Legislature of Liberia of November 6, 1909, all foreigners, irrespective of nationality, were given the right to engage in coastwise and interior trade. However, by an enactment of November 6, 1916, this right was suspended during the World War and for a period of two years thereafter. Foreign traders desiring to establish themselves within the trading area proclaimed must make application to the Secretary of the Treasury of Liberia in writing signifying their acceptance of certain conditions which are set forth in the proclamation before a license will be granted to them.

Trade Lists Available.

The Commercial Intelligence Division has recently compiled the following trade lists, which have been mimeographed, and copies can now be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the titles and file numbers:

Automotive products, importers and dealers, Bolivia	LA–11008–B.
Automotive products, importers and dealers, Ecuador	LA–15001–B.
Drugs, chemicals, and toilet articles, importers and dealers, Bermuda	LA–34046.
Drugs, chemicals, and toilet articles, importers and dealers, Dutch West Indies	LA–36002–B.
Dry goods and clothing, importers and dealers, Barbados	LA–34041.
Dry goods and clothing, importers and dealers, Bermuda	LA–34045.
Dry goods and clothing, importers and dealers, Trinidad	LA–34082.
Groceries and provisions, importers and dealers, Barbados	LA–34043.
Groceries and provisions, importers and dealers, Trinidad	LA–34033.
Hardware, importers and dealers, Barbados	LA–34040.
Hardware, importers and dealers, Egypt	NE–14022–A.
Hospitals, Bolivia	LA–11025.
Hospitals, Paraguay	LA–19014.
Lumber, importers and dealers, Bahamas	LA–34009–A.
Lumber, importers and dealers, British and French West Africa	BE–6040.
Lumber, importers and dealers, Mexico	LA–30083–C.
Lumber, importers and dealers, Portuguese East Africa	EUR–10020–A.
Paints and varnishes, importers and dealers, Canary Islands	EUR–11046.
Photographers and importers of photographic supplies, New Zealand	FE–24031.
Plumbing supplies, importers and dealers, Netherlands East Indies	FE–19040.
Printers and importers and dealers of printing supplies, Australia	FE–23047.
Printers, publishers, importers, and dealers of printing supplies, New Zealand	FE–24028.
Textiles, manufacturers, Mexico	LA–30080.
Toilet articles, importers and dealers, Canary Islands	EUR–11047.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases, and where no references are offered it does not necessarily imply that satisfactory references could not be given. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

American consular officers on leave 829

HEARINGS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of hearing by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 11 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Paint-Brush Handles.

Notice is hereby given, pursuant to section 315 of the tariff act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 17th day of July, 1923, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production and of all other facts and conditions enumerated in section 315 of the tariff act of 1922 with respect to the following articles described in paragraph 410 of Title I of said tariff act, namely: Paint-brush handles, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

A copy of this notice shall be posted for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof once a week for two successive weeks in Treasury Decisions and in COMMERCE REPORTS.

By the United States Tariff Commission.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of hearing by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 16 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Wall Pockets.

Notice is hereby given, pursuant to section 315 of the tariff act of 1922, that a public hearing in the foregoing investigation will be held at the office of the United States Tariff Commission in Washington, D. C., at 10 o'clock a. m. on the 24th day of July, 1923, at which all parties interested will be given an opportunity to be present, to produce evidence, and to be heard with regard to the differences in cost of production and of all other facts and conditions enumerated in section 315 of the tariff act of 1922 with respect to the following articles described in paragraph 1313 of Title I of said tariff act, namely: Wall pockets, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

A copy of this notice shall be posted for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy thereof once a week for two successive weeks in Treasury Decisions and in COMMERCE REPORTS.

By the United States Tariff Commission.

JOHN F. BETHUNE, *Secretary.*

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN, DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

American Quality Overcomes Economic Obstacles.

It is undoubtedly true that the nature of a product determines the conditions under which it must be sold or, briefly, the price policy to be followed. The ideal product is manifestly one of good quality sold at a relatively low price. Local conditions, such as economic depressions or the per capita purchasing power of the local population, have a marked effect on the salability of an article; so the question to be decided is whether the product should be cheapened, in order that its price may be lowered, or whether the quality is to be maintained even though the sales decrease in proportion.

One should not make the mistake of thinking, because people in certain sections of the earth have ideas of life and modes of living entirely different from the American, that these people have no conception of quality.

In surveying market reports, as received from Government representatives abroad, the most striking fact is that American products in so many cases sell on a quality basis, competing successfully with cheaper articles. "Success" in this sense does not necessarily mean volume, but it does mean marketing of higher-priced articles—in the face of what is often severe price competition—and the eventual establishment of a reputation for excellence.

Foreign markets to-day, into which so many American exporters have entered successfully, are still to a certain extent in the throes of the economic depression that gripped the world immediately after the war. American manufacturers selling goods abroad are handicapped severely by the price factor. Higher cost of production has led to higher competitive prices—prices which the foreign purchasers, with their currency depreciated, can ill afford to pay. The fact stands out, however, that we are exporting goods and selling them to advantage.

Gradually in some countries and more quickly in others, the relative value of most foreign moneys is rising. With this bettering of conditions abroad, the relative prices of American goods established on a quality basis (in some cases considered the best in their lines) are actually becoming lower and lower, so far as the foreign purchasing power is concerned. This means that exporters now successfully marketing quality products in foreign fields can expect a greater volume of sales and a proportionate increase in their profits. Not only do these rising values of foreign currencies have a favorable effect upon the exporters already in the field, but this condition opens up opportunities to those manufacturers who have been prevented from sharing in our foreign trade because price competition on their products has been too keen.

The American exporter has his opportunity now to pluck the fruits of his hard work and perseverance in the past and to make strides toward a permanent, profitable trade in markets abroad.

Trade with Latin America Flourishing.

April foreign-trade figures completely demolish the sophistical argument of anti-American propagandists in Latin America that, because of alleged diminishing purchases by the United States in those markets, Latin Americans should place their import orders with their supposedly better customers in Europe rather than with this country, which is charged with always selling and never buying.

In April, 1923, the United States imported from Latin American countries merchandise valued at $111,550,000—almost double the value of such imports in April, 1922—and in the 10 months ending with April, 1923, goods valued at $818,931,000, an increase of 55 per cent over those imported in the 10 months ending with the previous April. Increases in imports from certain countries are even more striking than the increase in total imports from Latin America. In the 10 months ending with last April our imports from Chile were 157 per cent greater and from Cuba 80 per cent greater than in the corresponding period of 1921–22. Considering April alone, imports from Chile were 110 per cent larger, from Cuba 74 per cent greater, and from Peru 60 per cent more in 1923 than in 1922.

Instead of finding the United States a parsimonious purchaser of their raw and semiraw products, Latin Americans are developing in this country steadily improving markets for their hides and skins, wool, coffee, cacao, sugar, fruits, minerals, and other products. Half the coffee of Brazil, half the nitrates of Chile, and an important percentage of other Latin American commodities are sold in the United States.

Reciprocal Latin American imports from the United States have shown a scarcely less satisfactory growth.

In April, 1923, we exported to Latin America $56,600,000 worth of goods—an increase of 37 per cent over April, 1922. In the 10 months ending with April, 1923, our exports to Latin America reached a value of $483,873,000, as compared with $411,587,000 in the 10 months ending with April, 1922. The smaller percentage of increase in the 10-month period, as compared with that for April alone, is largely explained by the time that has been required for our larger imports from Latin America to react on the purchasing power of that region.

The increasing mutual purchases of Latin America and the United States afford convincing proof of the soundness and permanency of the commercial relations between the great divisions of the American Hemisphere.

Agent's Nationality Affects Business Abroad.

Statements emphasizing the inadvisability of employing citizens of a competing country to handle American business or sell American goods abroad are frequently issued; yet the warnings are apparently often disregarded, frequently with disastrous results. Commercial Attaché Charles H. Cunningham, at Madrid, writes that within a short period of time several cases have been brought to his attention where firms have had serious difficulties because of intrusting sales to a representative who was a citizen of a third country which was endeavoring to sell competitive goods in the same market.

In one case it was the director of European sales, a citizen of such a country, who refused to listen to the complaints made by the local sales agent (an American) against the unwise policy followed by a traveling representative in Spain. In another instance it was found that a firm was being "double-crossed" by its foreign manager, who agreed, with a firm of his own nationality, that he would push only one of two equally important American lines—suppressing the other in order to avoid competition with his compatriots. An American automobile has had its sales greatly cut down through the appointment as agent of a citizen of a third country who makes no effort to sell the American car. Another American automobile firm directs sales through a representative residing in another country, who makes only occasional trips to Spain, is not well acquainted there, and is unable to promote the sales of the American car efficiently even if he desires to do so. An important American electrical machinery company has recently lost practically the whole of its local market by intrusting its sales to a manufacturing company of a third nation handling competing products.

These observations of the American commercial attaché give force to the frequently repeated injunction to get Americans to handle American products whenever possible—or, if this is not feasible, to choose a citizen of the country in which the goods are to be sold who is not already an agent for rival goods—but under no circumstances to let your interests be represented by a citizen of a country which is selling in that market goods competing with your products.

Where Demand Gives Rise to Demand.

The American manufacturer, in arranging a foreign selling campaign for his product, may profitably remember that the stimulation of foreign demand for his line will give rise to demand for allied products. For example: A firm may be seeking foreign markets for soda-fountain equipment. Where desire can be created for soda-fountain equipment, similar desire arises for fruit flavors of all sorts, for carbonated water, and for such bottled drinks as are usually sold at soda fountains. Likewise, possibilities are opened up for the sale of ice-cream freezers and other products more remotely connected with soda-fountain operation.

There are a number of other types of commodities in which a similar situation would obtain. In such cases the manufacturer might make a list of the products that are plainly allied to his own. Then he might get in touch with the producers of these, outline to them his foreign sales plan, and suggest cooperation of a type that might be profitable to all concerned. A concerted drive on foreign markets on the part of a number of manufacturers of allied products, with each one aiding and supplementing the sales work of the others, might well yield better results than could be attained if each one were to undertake the task single-handed.

AMERICAN FIRMS UTILIZE INFORMATION SERVICE.

An important American rubber firm writes as follows:

It is impossible for us to express our gratitude for the wonderful work that is being done by the Rubber Division of the Bureau of Foreign and Domestic Commerce, and we feel quite sure that, if the export departments of other rubber concerns knew the valuable information they could secure through you, they would certainly be in a position to increase their export business.

The following statement is made by a firm of engineers and contractors:

We have just finished reading your Special Agents' Series No. 215—Asiatic Markets for Industrial Machinery. We believe it contains more valuable information for us on the markets of Asia than any other volume and enlightens us on many subjects with which we were unfamiliar.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.

LABOR UNREST IN SPAIN.

Based on cable from Commercial Attaché Charles H. Cunningham, Madrid, with cooperation of American consuls in Spain, especially the consul general at Barcelona.

The most striking feature of the Spanish situation is the widespread labor unrest, which is particularly severe at Barcelona, where shipping and many industries are almost paralyzed by strikes and disturbances. The financial situation of the Spanish Government is discouraging, and renewed outbreaks in Morocco have contributed to loss of confidence. The earnings of railways, electric works, and some of the mining and metallurgical plants are increasing, but other industries are in difficulty through labor troubles. The latest trade figures show increases in both imports and exports, especially in imports, thus increasing the already unfavorable balance of trade. A notable decline has occurred in the value of the peseta within the past month. The total drop was nearly one-half cent, and on June 14 the lowest quotation since December 17, 1921, was reached.

Weak Financial Situation—Declining Exchange.

No improvement has occurred in Spanish Government finances or in the general situation of the Government. The renewed outbreak of the Moroccan war has shaken public confidence. It is expected that the Government will have recourse to a new loan in October for financing operations. In May, customs collections amounted to 40,200,000 pesetas, a decrease of 10,000,000 pesetas from May, 1922. The revision of real property surveys is progressing steadily, and when completed will probably double receipts from the land tax.

The period from the middle of May to the middle of June was marked by a renewed drop in peseta exchange. A decline might have been expected from the unfavorable condition of Government finances and continuously increasing excess of imports over exports. On May 10 the quotation was 15.21 cents (noon cable buying rate, New York City), followed by a reaction to slightly higher values, culminating in a quotation of 15.27 cents on May 22. From then on a decline set in, gradually becoming more rapid until a quotation of 14.82 cents was reached on June 14. This is the lowest quotation since December 17, 1921. The drop in peseta value may not be due entirely to unfavorable conditions in Spain, but may be at least partly ascribed to the general downward tendency of European exchanges.

Financial Transactions Decrease.

The turnover on the Madrid Bourse was smaller in May than in the preceding months, amounting to 47,000,000 pesetas, compared with 80,000,000 pesetas in April. Transactions in the Madrid clearing house in May amounted to 325,000,000 pesetas, compared with 289,000,000 pesetas in the last 20 days of April, the first period of operation of the clearing house. Bilbao clearings in May totaled 43,000,000 pesetas. Arrangements have been made for the admission of foreign bank paper to the Spanish clearing houses beginning June 1 by clearing through Spanish banks.

The statement of the Bank of Spain for June 9 compared with May 6 shows a reduction in current accounts and note circulation. The principal items on the two dates are as follows:

Statement of Bank of Spain.

Items.	May 6.	June 9.
	Pesetas.	*Pesetas.*
Note circulation	4,160,000,000	4,134,000,000
Current accounts	950,000,000	929,000,000
Discounts	695,000,000	896,000,000
Credits	898,000,000	845,000,000
Reserves	2,525,000,000	2,525,000,000

The Government credit balance with the bank amounted to 451,000,000 pesetas on June 9 compared with 554,000,000 pesetas on May 6, demonstrating the large excess of Government expenditures over revenues.

The Banking Situation.

A decree has been issued authorizing the Bank of Spain to purchase securities for third parties. This complicates the banking situation by permitting this privileged institution to invade the private banking sphere. The projected plans for reorganizing the Bank of Barcelona, which has been under suspension for a long time in order to avoid definite bankruptcy, have been published.

The operations of the Mortgage Bank decreased from 111,000,000 pesetas in 1921 to 95,000,000 pesetas in 1922. Profits were not diminished, however, and a dividend of 10 per cent was declared. The 1922 annual reports of various other banks throughout Spain also show decreased operations compared with 1921.

Railway Earnings in 1922.

The net earnings of the Madrid-Zaragoza-Alicante Railway in 1922 amounted to 23,000,000 pesetas against 20,500,000 pesetas in 1921, while earnings of the Norte Railway amounted to 22,000,000 pesetas against 21,500,000 pesetas; dividends of 22 per cent and 24 per cent, respectively, were paid on shares which have a par value of 500 pesetas. The Norte Railway has declared its intention to purchase a considerable amount of new equipment, including locomotives, tenders, passenger and freight cars, involving an expenditure of 40,000,000 pesetas. Spanish houses are obtaining most of the new contracts for locomotive construction.

Private Finances and Dividends.

The municipality of Madrid is borrowing 46,000,000 pesetas on July 4 at 5½ per cent. The loan has been

underwritten by local banks, with an American bank participating extensively.

The Constructora Naval and the Altos Hornos de Bilbao Steel Works have declared regular dividends for 1922, while the Hispano-Americana Electricidad has announced profits of 51,000,000 pesetas compared with 41,600,000 pesetas in 1921, declaring a dividend of 11 per cent against 9 per cent in the earlier year. The Babcock-Wilcox and Duro Felguera Metallurgical Works report small profits and have not declared dividends.

Petroleum Drilling—Inquiries for American Coal.

Drilling for petroleum in northern Spain continues, but no favorable results have been obtained. Inquiries have been made at Barcelona and Valencia for c. i. f. quotations on American coal. Complaints are being made against the failure of British deliveries.

The Labor Situation.

Labor disturbances and strikes are outstanding features of the present economic life of Spain. They center at Barcelona, but are also prominent in other regions. At Barcelona 60,000 men are now striking or unemployed, paralyzing transportation and increasing port congestion, thus causing various textile, chemical, woodworking, automobile, and metallurgical plants to close. If developments follow their present course within a month 200,000 men will be affected, and the industrial center of Spain will be paralyzed. Strikes are also threatened in Madrid and in the mining and metallurgical works of northern Spain. Labor in Bilbao is at work, but is demanding excessive wage increases. The Duro-Felguera plant has on its hands a strike affecting 1,800 men.

Buildings Problems.

Increased interest is being manifested in building problems, fostered by the National Construction Convention just held in Madrid. At that conference resolutions were passed favoring Government loans to assist building, which, if effected, will mean increased lumber importations. In this connection, the tariff alteration favorable to importing ready-built houses is significant. (For this and other tariff changes, see tariff section of next week's issue of COMMERCE REPORTS.)

The cost of living in Spain, as shown by index numbers, is again rising. The index figure for April is 174 compared with 171 for March and 170 for February. The figure for April, 1922, was 185.

Unfavorable Trade Balance in January.

The statistics of foreign commerce in January, just issued, show increases in all classes of imports, except foodstuffs, over January, 1922. Exports of raw materials and foodstuffs increased, but manufactured goods declined considerably. The following table gives export and import trade in all commodities except gold and silver:

Value of Spanish foreign trade in January, 1922 and 1923.

Class of commodity.	Imports.		Exports.	
	1922	1923	1922	1923
	Pesetas.	*Pesetas.*	*Pesetas.*	*Pesetas.*
Live animals	731,374	1,464,692	288,616	110,697
Raw materials	103,482,958	110,995,419	26,217,263	32,560,751
Manufactured articles	77,026,370	130,115,532	28,623,419	23,947,366
Foodstuffs	59,030,332	35,112,546	56,130,346	72,398,423
Total	240,271,034	277,688,189	111,259,644	129,017,237

Exports have increased by 17,758,000 pesetas over January, 1922, while at the same time imports have increased by 37,417,000 pesetas, thus further increasing the excess of imports which were already more than twice as great as exports.

Conditions at Barcelona.

Consul General Totten at Barcelona reports that the value of declared exports to the United States in May was $328,000 compared with $596,000 in April. The decrease, in the opinion of the consul general, is due principally to strikes. American exporters should bill merchandise destined to Madrid via other ports than Barcelona—particularly Bilbao, Santander, and Cadiz—until the labor situation improves, which is not likely to occur very shorty. Cotton arrivals at Barcelona are considerably less than last year, and spinners' takings have decreased slightly. The percentage of American cotton imported is lower. Idle vessel tonnage is reported as considerably decreased from last year.

LOWER EXCHANGE AIDS BELGIAN EXPORT TRADE.

Based on cable from Acting Commercial Attaché S. H. Cross, Brussels, with cooperation of Consul Messersmith, Antwerp, June 17.

The recovery of business in Belgium from the stagnation caused by the transportation strike, which began toward the end of April and lasted until June 1, has been hastened by lower exchange rates which render Belgian prices, especially on metallurgical products, more attractive for foreign buyers. As a result, some optimism now prevails regarding the immediate future. All crops have been injured by rain and cold weather. Metallurgical and textile conditions in general are somewhat improved since June 1. Antwerp was almost paralyzed in May by the transportation strike.

Effect of Cabinet Crisis.

The internal political situation in Belgium is uncertain because of the resignation of the Theunis cabinet on June 14 over the question of the use of Flemish in the university. A change of administration would compromise the position of the country as regards both internal finance and the reparations policy. Note circulation in May showed a slight tendency to decrease, owing apparently to reduced activity in general business transactions. The high for the month was 6,816,000,000 francs and the low 6,722,000,000 francs compared with an average of about 6,850,000,000 francs in April. The third lottery loan of 1,000,000,000 francs was so heavily oversubscribed that apportionment was necessary. Money was somewhat easier, with bank acceptances ranging between 4¼ and 4⅜ per cent compared with 4¾ per cent in April, and best commercial acceptances at 4½ to 4¾ per cent. Call money was available at 3½ to 4 per cent.

In the stock market particular activity was manifested in industrials and colonials, and sharp advances occurred in metallurgy, collieries, textiles, and glass, especially since the conclusion of the railroad strike on June 1.

Cold Weather Damages Crops.

The condition of Belgian crops has been seriously hurt by the recent excessive rains and continued cold

weather. The expected yield of all grains has been reduced, and potato production will be subnormal. The lower yield of sugar beets per acre will be compensated by the increased acreage sown. Flax developed poorly, and much of the area has been plowed under and the ground resown. Cattle raising continues to be profitable because of good forage conditions.

Renewed Activity in Metals—Textiles Strengthened.

Until the end of May dullness and rapidly falling prices characterized the Belgian metal market; but, during the first two weeks of June, a distinct recovery has occurred, particularly in finished steels, although pig iron and semifinished products are still lagging somewhat. The majority of blast furnaces previously shut down on account of lack of coal are again operating, but not at full capacity. Prices are now advancing. There is no appreciable coal shortage, but shortage of freight cars is reported because of poor distribution resulting from the transportation strikes.

A considerable increase in the volume of business in flax yarns has been recorded since the beginning of June. Native and foreign demand for linen and cotton fabrics is considerable, but transactions in the finer counts of cotton yarns are slow because of the rising price of the American staple. For this reason, Indian cotton is being substituted wherever possible. The generally prosperous operation of linen and cotton mills for the balance of the year appears assured.

Plate and window glass works are now operating normally.

Economic Paralysis at Antwerp.

Consul Messersmith at Antwerp reports that economic life there was practically suspended during May because of the transportation strike. Exports were greatly reduced and imports had to be stored until warehouse space was at a premium. Business was confined to spot goods, and there was a steady demand for wheat and corn, while transactions in pork products were reduced 75 per cent from April. The lumber business was disorganized because of inability to ship inland, but a slight increase was noted in imports of American oak. There were some small transactions for summer delivery of California dried fruits, and imports of tobacco from the United States remained normal despite dullness in the local market. Notwithstanding difficulties in delivery and higher prices on gas oil and kerosene, trade in petroleum products was brisk.

BUSINESS CONTINUES DULL IN SWEDEN.

Based on cables from Consul W. A. Leonard, Stockholm, June 15 and 16.

Swedish exports during April were very much below normal, but an improvement during the month is noticeable, particularly in the exports of wood pulp and lumber. Imports were practically normal, while shipments to the United States showed an increase. General business conditions are dull. A decline in industrial issues and bank clearings is shown, and strikes continue in the iron industry.

Note Circulation and National Debt—Bourse Index.

The note circulation of the Swedish Riksbank decreased slightly from 529,000,000 crowns on May 12 to 528,830,000 crowns on June 9, while the gold reserve and national debt reported on May 12 at 274,000,000 crowns and 1,568,000,000 crowns, respectively, remained practically unchanged. Riksbank clearings for May amounted to 1,772,000,000 crowns as compared with 1,776,000,000 crowns in April.

The Bourse index on June 12 showed industrials at 95.5 and bank shares at 85.7 as compared with 100.3 and 86.3, respectively, on May 7. The Bourse turnover for March amounted to 13,600,000 crowns, as compared with 11,300,000 crowns in February.

Swedish capital issues during May amounted to 8,590,000 crowns—a considerable decrease from 32,200,000 crowns for April and 14,000,000 crowns for March. Protested notes numbered 5,530 and were valued at 4,850,000 crowns. Bank deposits, loans, and foreign credits continue to decrease slightly.

Unemployment—Prices—Emigration.

Unemployment on May 1 registered 35,200, a decrease from previous figures. Commercial failures for May numbered 301 against 273 in April and 430 in May, 1922.

The wholesale price index early in June stood at 158 as compared with 159 and 162 in May and April, respectively.

Emigration to the United States during May amounted to only 1,748—a very low figure because of near exhaustion of the quota. Emigrants to the United States from Sweden during April numbered 3,779 and during the first quarter of 1923, 6,177.

Foreign Trade Continues Unfavorable.

Swedish imports of principal commodities during May as compared with April were as follows: Wheat—May, 30,300 metric tons; April, 28,000 metric tons; mineral oils—May, 23,400 tons; April, 12,700 tons; coal—May, 363,000 tons; April, 274,000 tons; iron and steel—May, 11,600 tons; April, 7,900 tons; maize—May, 3,546 tons; April, 4,300 tons; cotton—May, 419 tons; April, 950 tons. Automobiles imported during May numbered 2,295 as compared with 1,594 for April.

Exports of principal commodities during the month as compared with April were as follows: Wood pulp—May, 112,000 mertic tons; April, 21,500 metric tons; sawn lumber—May, 160,378 M board feet, including 8,777 M board feet box shoooks; April, 37,312 M board feet, including 4,600 M board feet box shooks; planed lumber—May, 26,415 M board feet, including 1,760 M board feet box shooks; April, 8,650 M board feet, including 680 M board feet box shooks; paper—May, 21,500 metric tons; April, 16,400 metric tons; iron ore—May, 356,000 tons, showing an increase over April; matches—May, 2,400 tons; April, 2,300 tons; iron and steel—May, 17,200 tons, which was a slight decrease as compared with April exports.

Exports to United States Increase.

Declared exports from Sweden to the United States during May were valued at $4,184,000 as compared with April exports valued at $1,720,000. Swedish exports to the United States during May included wood pulp at $2,522,000; paper, $594,000; and iron ore, $362,000.

Value of April Foreign Trade—Trade Balance for 1922.

The total value of Swedish imports during April was 114,600,000 crowns and of exports 61,600,000 crowns. The total value of imports during the first quarter of 1923 was 284,000,000 crowns and of exports 175,000,000 crowns. The number of board feet of lumber sold up to June 15 is estimated at 990,000,000, an increase of 25 per cent over that of a year ago.

Revised official trade statistics for 1922 give the value of imports as amounting to 1,118,400,000 crowns and exports, excluding gold shipments, to 1,151,200,000 crowns, leaving a favorable balance of 33,000,000 crowns as against a slight unfavorable balance of 12,000,000 crowns reported in preliminary figures.

DUTCH INDUSTRY CONTINUES TO MARK TIME.

Based on cable from Paul S. Guinn, office of commercial attaché, The Hague, June 15.

The States-General of the Netherlands is now considering a bill providing for the continuance during 1923 of the East Indies products tax. The proposed legislation includes a tax on new mineral oil production and provides for the removal of the previous export duty on oil. The Government is requesting that authority be granted for a four years' loan of 1,400,000 guilders to the Royal Air Navigation Co. Of the total authorized Dutch East Indies loan, amounting to 300,000,000 guilders, 65,000,000 guilders was floated during May. During the month 3,000,000 guilders, carrying the Government's guaranty, of the Austrian international loan was also floated. The State revenue for May, 1923, amounted to 40,537,423 guilders as compared with 36,880,927 guilders in April.

Industry Unchanged Although Unemployment Decreasing—Capital Emissions.

Industry continues to mark time, awaiting developments in the Ruhr situation. Industrial shares which ordinarily feel an adverse effect as a result of a depreciation of the German mark, are generally unaffected by the recent decline, which is interpreted to mean that at present German competition need not be feared. The number of unemployed in the Netherlands on June 2 was 75,000, as compared with 83,764 on May 5. An Amsterdam rubber company has organized new affiliated companies to work the uncultivated ground of the parent company. Purchasers of new shares are guaranteed a 6 per cent dividend up to 1929. On May 15 there were 211,000 registered gross tons of shipping in the Netherlands.

Money is plentiful and interest rates are generally lower. Capital issues during May amounted to 8,503,000 guilders. Total emissions during the first five months of 1923 amounted to 112,669,000 guilders. Prices of raw products were generally lower during May while prices of manufactured products were higher. Higher prices for raw products are predicted for June.

The Central Bureau of Statistics index figure for wholesale prices of articles of consumption during April was 155 against 164 for March. The retail price index stood at 149 for April, remaining unchanged since February. (Figures are based on 100 for 1913.)

EASTERN EUROPE AND LEVANT.

E. Dana Durand, Chief, Eastern European and Levantine Division.

CONDITIONS IN POLAND DURING MAY.

Based on cable from Assistant Trade Commissioner Elbert Baldwin, Warsaw, June 11, and reports from Acting Commercial Attaché H. B. Smith.

A new coalition majority in the Polish Diet has been formed by the more conservative parties. The reorganized Cabinet retains the former Finance Minister, whose program of increased revenue, including the fixing of taxes and public charges on a sliding scale, taking account of the depreciation of the currency, is being actively pushed for adoption. The sale of Treasury notes in terms of Zloty has permitted a reduction in the rate of issue of paper currency. Prices rose and exchange fell relatively slowly during May. Business depression continues, but with some measure of recovery.

Progress of Finance Legislation.

A majority in the Diet has been secured by a coalition between the conservative parties and the moderate left Polish Peasant Party, as the result of which Witos, leader of the latter group, who had been Prime Minister in 1920, was again given that office. The principal issue between the right and the moderate left has to do with agrarian reform. An understanding is reported to have been reached, but legislation is not expected before fall. Grabski, who was Minister of Finance under the Sikorski cabinet, remains at this post.

The new cabinet is pushing before the Diet the measures of financial reform proposed by Grabski a few months ago (see COMMERCE REPORTS for March 26). Already (during May) the Diet has passed an income-tax bill and a bill increasing land taxes one hundred fold, this great increase being necessitated by the rapid depreciation of the currency. No definite action has been reported with regard to the Government's proposal that taxes and Government charges shall be fixed in terms of zloty; that is, while the actual payment would be in Polish marks, the amount would be calculated on the basis of a theoretical stable currency, the number of marks paid being adjusted to the decline in the buying power as measured by the increase of wholesale prices.

Reduction of Rate of Currency Emission.

During April and May the Government issued a considerable amount of short-term interest-bearing notes, expressed in terms of zloty. The use of this method to protect investors against loss by depreciation made this note issue the most successful financing operation yet undertaken. The funds obtained in this way enabled the Government to reduce materially the rate of printing of paper money. The amount outstanding at the end of May (2,734 billion marks) represented an increase of 13 per cent over April—the lowest rate of increase since the spring of 1922.

Exchange transactions, which had been approximately steady in February, March, and April, fell somewhat more in May. The exchange value of the dollar stood at 53,500 marks at the end of May, as against 46,250 marks at the end of April. During June exchange has fallen sharply and on June 15 was about 70,000 marks to the dollar.

The general level of prices continues to show less increase than that in the volume of currency, partly, however, as the result of the continuance of the business depression which began in February. Average

wholesale prices in May increased about 6 per cent and average retail prices about 12 per cent over April.

Partial Resumption of Business Activity.

The sharp reduction in manufacturing operations during March is gradually giving place to greater activity. Manufacturers, in order to increase their output, have made very considerable sales on credit, payment, at least in part, of these transactions being adjusted on the zloty. Resort to the use of accepted bills has been common. Some fear is expressed that this increase of credits may encourage undue speculation and result in a new relapse. The increasing use of the zloty basis for all classes of credit transactions has been in general helpful. Some elements in Poland are urging that the Government attempt to introduce gold currency at the present time, but this is generally considered premature.

During March and April, speculation, diverted from foreign exchange and commodities, became active in the shares of corporations, especially of banks. The prices of many shares advanced greatly, finally reaching a level generally considered in excess of their gold value. During May there was a sharp break in the stock market.

Crop prospects are favorable. The Polish farmers are in a sound position and largely independent of financial or industrial developments.

While manufacturing industries and internal trade have been much affected by the industrial depression, there has been no tendency to reduce the output of coal and oil. Coal production in Poland proper during March was more than 900,00 tons—decidedly in excess of the highest previous post-war record and also of the pre-war average. Chiefly on account of the holidays, the production in April was less, totaling 811,000 tons. March was also the record month for the post-war period in coal production in Upper Silesia, with an output of 2,436,000 tons, which fell in April to 2,147,000 tons. The car loadings during May in Poland proper averaged 7,238 daily, and in Polish Silesia 5,254—in each case a slight decline as compared with April.

Favorable Foreign Trade Balance for First Quarter.

The advantage to Poland of the annexation of Polish Silesia, with its great coal, steel, and zinc industries, is shown in the very marked increase of exports. While the value of imports has also increased (despite the fact that importation of coal is no longer necessary), the first quarter of 1923 showed a considerable excess of exports over imports. During March this excess was 46 per cent. The total value of imports for the three months, converted on the basis of average exchange rates, was $52,020,000, and that of exports was $61,030,000. This favorable balance of trade, aided by the remittances of emigrants, is a partial explanation of the comparative steadiness of the exchange value of the Polish mark during February and March in the face of great increases in the volume of outstanding currency.

Timber exports, which had been temporarily prohibited, have been resumed under a system of licenses.

The deliveries of cotton from abroad, which had been suspended by the mills during the worst of the business depression, are being resumed.

51503°—23——2

RUMANIAN BUSINESS SITUATION SHOWS LITTLE IMPROVEMENT.

Based on cable data and reports from Acting Commercial Attaché Louis E. Van Norman and Clerk Gilbert Redfern, Bucharest, and other sources.

General apathy followed the promulgation of the new Rumanian constitution. Financial stringency is affecting business. Exchange shows some improvement. Negotiations are under way for floating a £6,000,000 loan in England. A commercial agreement has been concluded with Spain. Trade with Russia has been resumed over the Bessarabian border. Petroleum and cereal exports increase. Navigation on the Danube was resumed on April 15. South America is a keen competitor of Rumanian grain exporters.

Business Conditions Dull.

General apathy, politically and economically, appears to have followed upon the promulgation of the new Rumanian constitution, which was signed by the King on March 28. Business in general has been very dull. The commercial community has not recovered from the uncertainty of the Parliamentary situation and the effect of the new foreign-exchange law. Because of exchange fluctuations, the Minister of Finance has decided that, hereafter, export taxes to countries having a high currency must be paid in the currency of the importing country, or in French francs. For countries of a low currency taxes must be paid in sterling, dollars, or francs. There is much dissatisfaction among all civilian employees of the Government on account of the constantly increasing cost of living (the general average of which on April 20, 1923, was 2,775) and the very low scale of pay for Government employees. Navigation on the Danube was resumed on April 15 and lumber began to move out rather freely.

Financial Stringency Unabated.

According to the Monitural Official of April 25, the Council of Ministers has ratified the agreement made by Rumanian commercial debtors with their British creditors, and it is stated that, in case of lack of success in concluding an agreement with other high-currency countries, the Minister of Justice was authorized to formulate a law prolonging the time within which such debts might be paid. There has recently been a strong demand from financial and industrial interests for an increased note circulation in the belief that this would give some relief from the acute money shortage which is affecting the economic life of the country. This shortage, however, is really one in credit, due largely to the existing currency inflation, and would probably not be remedied by further paper-money issues. The National Bank is strongly opposed to further inflation.

Negotiations are under way for floating a loan of £6,000,000 in England. It is proposed that £4,000,000 will be supplied in materials needed for reconstruction of railroads; for river and navigation purposes, including dock and harbor construction; for the State tobacco monopoly; for the postal telegraph service; and for other public services. The balance of £2,000,000 is to be turned over in cash and used by the Rumanian Government for the liquidation of that part of the internal floating debt due to Rumanian industrial cor-

porations. There has been no definite statement regarding the security for the proposed loan.

Total collections from monopolies for the budgetary year April 1, 1922, to March 31, 1923, are reported as 1,960,000,000 lei, as against 1,430,000,000 lei for the preceding year.

The leu was quoted at $0.004775 on May 10 and rose to $0.005969 on May 25, but since then has declined, standing at $0.005108 on June 13. The bank-note circulation on May 12 was 15,850,000,000 lei, as against 15,590,000,000 lei on April 15.

Commercial Arrangement with Spain—Resumption of Rumanian-Bessarabian Trade.

A commercial arrangement with Spain has been concluded by virtue of which Spain will apply only the minimum custom duties on imports from Rumania and will receive from Rumania most-favored-nation privileges.

Smuggling over the Bessarabian border has assumed such proportions that the Rumanian Government has had to take cognizance of it. An arrangement has been made by which barley, rye, oats, peas, beans, fresh and dried fruits, and wine may be exported into Russia and payment made for same in dollars, skins, wool, or sugar.

Petroleum and Lumber Situation—Cereals.

Petroleum production for the month of April, 1923, was 128,000 metric tons. Production from January 1 to April 30, 1923, was 509,420 metric tons, as against 430,936 metric tons for the corresponding period of 1922. Petroleum exports for April, 1923, were 42,000 metric tons, as against 35,000 metric tons during March.

Exports of lumber during April showed a slight decrease to 47,000 metric tons from 48,000 metric tons during March.

Exports of cereals show a further improvement, being 139,000 metric tons during April as against 111,000 metric tons during March, and 102,000 metric tons during February. However, Rumanian grain exporters are now restricted to a small margin of profit, owing to the keen competition of South America. Galatz has practically ceased the exportation of grain. It is reported that the area sown to grain this year is about 20 per cent less than last year.

GREEK INDUSTRIES GAINING GROUND.

Based on reports from Acting Commercial Attaché R. O. Hall, Clerk Charles E. Dickerson, and Vice Consul C. M. Corafa, Athens, and other sources.

The Greek drachma, which had a rapid rise the first part of June, has again declined. The revenues of the port of Piræus have increased considerably. Germany is vigorously reestablishing its interests in Greece. There has been much improvement in the industrial development during the past year. The Greek rent moratorium has been prolonged. Greek railways are required to deposit a percentage of their income with the National Bank.

General Financial Situation.

The Greek drachma, which stood at $0.018122 on May 14, had a rapid but largely speculative rise to $0.040943 on June 2. The probable reason for this rapid rise in the drachma during the first part of June was threefold: First, the heavy purchases of tobacco and currants by American importers; second, the negotiations for an international loan; and third, the money spent by various relief associations in Greece. Since then it has steadily declined, reaching $0.0288 on June 13.

A special surtax on all goods imported into Greece through the port of Piræus was imposed by a decree published April 18, 1923, effective for three years. The proceeds of this tax are to be used for the maintenance of the port funds of Piræus. The revenues of the customhouse of the port of Piræus for March, 1923, amounted to 48,000,000 drachmas, as compared with about 14,000,000 drachmas for the corresponding month of 1922, the increase, however, being partly due to inflation of the currency. By a legislative decree published March 1, 1923, the rate of 15 drachmas, which was fixed as the ratio of paper to metallic drachmas for the collection of import duties during the month of March, will remain in force until the end of April.

Germany Vigorously Reestablishing Its Interests in Greece.

Germany is vigorously reestablishing its interests in Greece. During the first nine months of 1922 Germany ranked fourth among the countries of origin of goods imported into Greece and second among the countries buying from Greece. By a decree of April 5, 1923, the shipping convention between Greece and Germany, whereby German ships are accorded national treatment as regards the payment of lighthouse and roadstead dues, was extended for a period of three months from March 7—the date of the expiration of the old agreement.

Textile and Tanning Industry Gaining Ground.

The textile industry in Greece is gaining ground and it is hoped to become of the utmost importance to the country within the next few years. This industry includes the manufacture of cotton, wool, and silk fabrics and hemp and jute products. It is believed that the large influx of refugees will have the effect of transplanting the carpet industry of Asia Minor into Greece. Some 150,000 persons were engaged in the manufacture of carpets in Asia Minor, of which it is stated that about 75 per cent are Greeks and Armenians, who are now in Greece. A better quality of raw materials, wool, cotton, dyes, etc., will be found in Greece than in Turkey.

The growth of the tanning industry in Greece makes it important to develop the local production of tanning materials for which Greece is now dependent upon foreign countries. The tanning of leather by chemical processes is steadily gaining ground.

Greek Railways to Deposit Percentage of Income with National Bank.

According to a legislative decree, published April 3, 1923, the railways of the Greek State are required to deposit up to 15 per cent (the exact percentage to be fixed in each case by the cabinet) of their gross income from fares and freight with the National Bank of Greece. This amount is to be used solely for the service of the loan to be contracted for the execution of indispensable technical work, supplies, and materials; improvement of the lines; and renewal of the rolling stock.

Prolongation of Greek Rent Moratorium.

A decree was published on April 21 regarding the obligatory prolongation of the rent moratorium in

Athens and the surrounding country up to December 31, 1923. Rents on houses are to be materially increased according to the date when the renting was contracted.

Production of Potatoes, Cheese, and Lignite.

The estimated total potato production in 1922 was about 80,000 short tons. The cheese production for the season 1922–23 was only 1,975,000 pounds and nearly 5,000,000 pounds during 1921–22.

The production of lignite is constantly increasing. A new mine in the district of Oropos has a daily output of about 25 tons.

FINLAND'S ECONOMIC POSITION CONTINUES STEADY.

Based on cable of Trade Commissioner Carl J. Mayer, Riga, Latvia, June 5; report of Consul Leslie A. Davis, Helsingfors, May 26; the Finnish commercial press; and other sources.

The characteristic winter trend of Finland's foreign trade, in which imports exceed exports, continued in April, though advance sales of timber for summer delivery took added impetus. The financial situation remained favorable, and exchange, which was firm during April, gained slightly in May. April weather conditions unfavorable to the crops manifested improvement in May. Labor conditions were reported generally satisfactory.

Trade and Industry.

The April trade balance was again unfavorable. Exports totaled 195,500,000 Finnish marks (about $5,376,000 at the average rate of exchange), as compared with 154,000,000 marks ($4,350,000) in March, 1923, and 256,000,000 ($4,992,000) in April, 1922. Imports, which in March, 1923, were 311,000,000 marks ($8,474,000), reached 368,000,000 during April ($10,120,000), as against 322,000,000 ($6,192,000) in April, 1922. The excess of imports, therefore, was 172,500,000 marks ($4,744,000). Shifting of this balance is expected with the summer augmentation of timber exports. Large quantities of Russian grain were imported.

Up to April 30 it was estimated that the advance sales of timber had reached 712,800,000 board feet, the total present season's production being estimated at 1,683,000,000 board feet. Sales showed activity in April and increased in May. Important parcels of timber were again sold to France, and it was expected that the settlement of the building-trade strike in England would result in improved British demand. In general, prices for timber remained firm.

There was little change in the paper and the chemical and mechanical pulp markets. For the first four months of 1923 exports of paper declined slightly, compared with the corresponding period of 1922, while chemical pulp exports showed an increase of over nearly 60 per cent.

The Financial Situation.

The rate of exchange of the Finnish mark, which during the winter manifested a continued rise in spite of the great excess of imports, remained firm in April and May, the rate in the latter month averaging 2.77 cents, as against 2.09 in May, 1922. The balances abroad of the Bank of Finland stood at 828,000,000 marks in April, as compared with 208,000,000 in April, 1922, and showing a slight excess over March. Notes in circulation—which, principally as a result of loans of the joint-stock banks and of the Bank of Finland for financing timber operations, were greater in March than ever before (1,555,000,000 marks)—decreased by the end of April to 1,491,000,000. Discounts and loans totaled 695,000,000 marks—a slight decrease, indicating that the money market had become somewhat more easy.

Trade With United States.

The trade of Finland with the United States is developing favorably. The total value of the imports from the United States amounted during April to 48,683,000 marks (13.2 per cent of the total Finnish imports for the month), compared with 27,654,000 in March. The total for the first four months of 1923 was more than 50 per cent greater than for the corresponding period of 1922. The value of exports to the United States totaled 126,892,000 marks for the first four months of 1923, compared with only 49,053,000 marks for the corresponding period of 1922. The increase in imports is principally in colonial products, machines, meats and fats, etc. The chief item of imports from the United States—cereals—shows little change. The increase in exports to the United States is principally in wood pulp, cardboard, and paper, also in hides and skins.

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

DROUGHT AVERTED IN AUSTRALIA.

Trade Commissioner J. W. Sanger, Melbourne, June 18.

Danger of drought in Australia has been averted, sufficient rains having fallen to provide for wheat planting and feed for stock. New South Wales has a coal shortage, due to labor strikes. The Commonwealth Government has announced that it will make available its accumulated coal stocks. The Federal Parliament reopened on June 13.

Foreign Trade Again Shows Decrease and Seasonal Fluctuation.

The total Australian exports for April were £9,300,000—a decrease of £4,190,000 as compared with exports for the previous month. April imports aggregated £10,270,000, which was a slight increase over those for March.

March imports from the United States totaled £1,780,000 and exports to this country amounted to £1,240,000, as compared with £2,290,000 and £1,220,000, respectively, for February. This condition is seasonal and normally sound.

Market Conditions.

Slight decreases are noted in imports of textiles, knit wear, apparel, agricultural implements, oils, and iron and steel wire, which are distinctly seasonal imports. For the 10 months ended April 30 imports of apparel showed an increase of £2,930,000 and imports of textiles increased by £8,090,000 during the same period. Competitive overbuying, combined with unusual seasonal conditions, has resulted in large overstocking in these commodities and present indications are that there will be a decrease in the importation.

Increased imports of motor vehicles, lumber, girders, beams, channels, and iron sheets and plates were

recorded during the month. Importation of motor vehicles for the 10 months ended April 30 were more than double the value of imports for the corresponding period of 1922. A slight decrease was noted in imports of agricultural implements in this period but an offsetting factor is the increase in imports of tractors.

Wheat exports to June 1, 1923, were 25,650,000 bushels. Wool exports to May 31 amounted to 1,785,000 bales. This season's clip received in store to May 31 totaled 1,828,520 bales. Stocks on hand unsold on the same date were 43,000 bales.

Exchange Steady—Customs Receipts.

The London and Australian exchanges remain the same as previously reported, at $4.60 and $4.65. Both checking and savings bank deposits continue to show a normal increase, and there is a moderate demand for money. Melbourne-Sydney bank clearances for the period January 1 to June 4 totaled £637,000,000.

Receipts from Commonwealth customs and excise duties for the 11 months ended May 31, 1923, were £30,470,000. This was an increase of £5,190,000 over receipts for the corresponding period of the previous year and indicates a probable surplus of £10,000,000 for the fiscal year ended June 30.

Loan Negotiated in London—Abolition of Tariff on Steel Plates.

Western Australian loans to the value of £1,000,000, bearing interest at 4½ per cent, have been negotiated in London, selling at 95.

The tariff board has abolished the duty on all unworked steel plates to be used in construction of the Sydney Harbor Bridge, probably because of the magnitude of the undertaking. This will be one of the longest single-span bridges in the world—greater than Brooklyn Bridge and only 200 feet shorter than Quebec Bridge. The estimated cost is £6,000,000, and the work of construction is expected to extend over 8½ years.

Proposed Taxation Reform.

The new Federal Parliament, which adjourned in February, reopened on June 13. A bill is to be introduced to make effective the recent decision of the State premiers regarding taxation reforms. It is proposed to limit the Commonwealth to taxation of companies, the separate States to have entire control of income taxes. Other proposed legislation will deal with tariff reciprocity with Canada and South Africa and with the proposal to place under nonpolitical boards the control of the Commonwealth Shipping Line and the Commonwealth Savings Bank. It is also proposed that Parliament grant a liberal shipping subsidy on traffic to Far Eastern ports. The budget will be submitted during July.

Sufficient Rains Avert Drought—Construction Work.

Sufficient rains have fallen to care for wheat planting and to insure a moderate food supply for stock. Fears of drought previously entertained have thus been allayed.

No dimunition has occurred as yet in general building and construction activities.

The cost of living again shows an increase. The April commodity index number was 1,660 (based on 1,000 in 1914), as against 1,628 in March, 1,612 in February, and 1,654 in January.

Coal Shortage in New South Wales.

Strikes in northern collieries continue and New South Wales reports a coal shortage. To meet these conditions the Commonwealth Government announces that it will make available, on a per capita basis, to the various State utilities and industries its accumulated excess coal stock.

Foreign Trade of New Zealand.

Total imports for the month of April, 1923, were valued at $£3,530,000—an increase of £489,000 over imports in the preceding month. Exports of wool amounted to 93,000 bales. Outstanding foodstuffs exports for the same month were as follows: Butter, 117,000 hundredweight (112 pounds); cheese, 75,000 hundredweight; and lambs, 305,000 hundredweight.

ECONOMIC SITUATION IN JAPAN DURING MAY.

Based on cable from Commercial Attaché James F. Abbott, Tokyo, June 16.

Japanese exports of raw silk, cotton, and silk textiles and cotton yarn declined during May, while imports reached a high level. The money market was better. Capital expenditures increased during the month, while gold holdings continued to decline. Warehouse stocks showed an increase. The cocoon crop is now reported to be smaller than had been anticipated, owing to bad weather. An agreement was reached during the month by the Cotton Spinners' Association to limit the output of cotton yarn. Shipping during the month was reported to be active.

Silk Shipments Light—Money Market Better.

The month of May was characterized in Japan by very light shipments of raw silk and a falling off in the export trade of silk and cotton textiles and cotton yarn, while imports reached a high mark. The stock market was very weak and unstable and raw silk fluctuated wildly. The money market was somewhat better during the month with a slight increase in call rates. The yen on the New York exchange, which stood at $0.4907 at the beginning of the month, increased by May 15 to $0.4922 but declined to $0.4903 as the month closed. The failure of two small banks during the month had little effect on the money market. It is reported that a 50,000,000 yen loan was floated in London during May by the Tokyo Electric Co.

Increase in Capital Expended—Gold Holdings Decline.

Capital expenditures during May, as reported by the Hypothetic Bank, aggregated 175,500,000 yen, as compared with 109,900,000 yen during the preceding month. Of the amount expended during May, 124,700,000 yen represented Government issues, as compared with 35,000,000 yen during the preceding month; debentures amounted to 7,000,000 yen, against 29,800,000 yen for April; and capital-stock payments totaled 43,800,000 yen, as compared with 38,600,000 yen during the previous month.

Total gold holding of the Government and the Bank of Japan amounted to 1,797,000,000 yen at the end of May, 1,204,000,000 yen of which was held at home and the remainder abroad.

Japan's gold holdings on May 15 amounted to 1,799,000,000 yen— a decline of 3,000,000 yen from April 30 and almost 100,000,000 yen less than was held a year ago. Of the total gold holdings on May 15, 1,150,000,000 yen were held by the Bank of Japan and the remainder by the Government. The part held in Japan on May 15 amounted to 1,204,000,000 yen, while

the remaining 595,000,000 yen were held abroad. It is interesting to note that Japan's gold holding abroad declined about 80,000,000 yen during the year ended May 15.

Fractional Currency Notes Being Withdrawn from Circulation—Note Issue Declines.

The total note issue at the end of May amounted to 1,438,000,000 yen, as compared with 1,464,000,000 on April 30. The outsanding issue of the Bank of Japan stood at 1,207,000,000 yen on May 31—a decrease of 12,000,000 yen from the amount in circulation on the first of the month. The issue of Government small notes aggregated, at the end of May, 109,000,000 yen, as compared with 121,000,000 yen outstanding on April 31. A determined effort is being made by the Government to withdraw from circulation all of the small-change currency notes because these " bits of paper," as they are termed in Japan, are very unpopular with the people. As indicated by the figures above, 12,000,000 yen worth of these notes were withdrawn during the month of May. During the preceding month some 10,000,000 yen of this class of notes were withdrawn, including 50-sen notes amounting to 8,630,000 yen in value; 20-sen notes, 110,000 yen; and 10-sen notes, totaling 1,260,000 yen in value. At this rate of redemption these undesirable bills will have disappeared in about 12 months.

Customs receipts during April amounted to 8,817,570 yen, as compared with 9,799,350 yen in the preceding month and 10,261,026 yen during April, 1922.

Postal Savings Reach Record Level.

The postal savings bank reports that postal savings deposits steadily increase, evidently because farmers are disposing of their mulberry leaves and cocoons at a good price and depositing the proceeds with this bank. Other reasons are the security of this method of saving and the propaganda that is being circulated by the Government recommending this form of saving. The total deposits on May 15 reached the new high mark of 1,033,318,952 yen, which was an increase of 4,263,396 yen as compared with the first of the month. The number of depositors increased by 124,884 during the same period, reaching a total of 27,252,863.

Cost of Living Advances—Wages Stationary.

The cost-of-living index, as indicated by the average wholesale prices of representative commodities in Tokyo, increased 4 points during the month of May, standing at 263. The trend of wholesale prices has been steadily upward since the first of the year, at which time the index stood at 242. The Tokyo Chamber of Commerce reports that the retail prices in Tokyo on May 15 showed an increase of 1.1 per cent, as compared with the first of the month. Of 46 representative commodities, 6 advanced while 3 declined, the others remaining stationary or showing little change.

Wages during the month remained stationary and unemployment was in evidence as a result of the shutting down of some plants and the curtailment of output in others. Unrest and strikes were reported to be decreasing.

Japan's Exports Decline Sharply—Imports Increase.

Japan's imports for May were higher than during any month of this year, totaling 201,400,000 yen, as compared with 188,000,000 yen during April, while exports reached the low level of 114,300,000 yen, as compared with 149,900,000 yen during the preceding month. The excess of imports amounted to 87,100,000 yen—the highest adverse balance since February, 1922, when the excess of imports amounted to 96,000,000 yen. This makes an adverse balance for the first five months of the year amounting to about 282,000,000 yen and it is expected to reach the total of about 340,000,000 yen by the first of July. Such an excess of imports at this time of the year, when normally imports should be falling off and exports increasing, reflects the present unstable condition of Japan's foreign trade.

All the principal items of export show large decreases. Raw-silk shipments fell off 24,400,000 yen from last month's exports, which amounted to 64,600,000 yen, while exports of silk textiles dropped 2,400,000 yen during the same period. Cotton-textile and cotton-yarn exports both showed declines, amounting to 3,100,000 yen and 2,510,000 yen, respectively. Of the imports, machinery and rice are the only items which showed increases of any importance. All the other items remained about the same.

The decline in the exports of raw silk is accounted for by the refusal of buyers to accept the high prices demanded during the early part of the month and to the falling market during the latter half. Silk-textile exports were affected by the same factors. The boycott of Japanese goods in China, which has been vigorously renewed, is held to be partly responsible for the decline in exports of cotton yarn and cotton textiles.

The chief items of Japan's trade during April and May, 1923, are shown in the following table. These figures are preliminary and subject to revision.

Japanese imports and exports in April and May, 1923.

Articles.	April.	May.	Articles.	April.	May.
IMPORTS.	*Yen.*	*Yen.*	EXPORTS.	*Yen.*	*Yen.*
Raw cotton	55,700,000	54,900,000	Silk:		
Cotton textiles	400,000	500,000	Raw	64,600,000	40,200,000
Woolen textiles	1,300,000	1,000,000	Textiles	9,100,000	6,700,000
Machinery and parts	10,200,000	12,300,000	Cotton:		
Lumber	5,600,000	5,900,000	Textile	20,000,000	16,900,000
Rice	900,000	1,800,000	Yarn	10,010,000	7,500,000
Automobile parts and accessories	1,200,000	1,000,000	Matches	1,000,000	1,000,000
All other articles	112,700,000	124,000,000	All other articles	45,190,000	42,000,000
Total	188,000,000	201,400,000	Total	149,900,000	114,300,000

Imports of specie during May amounted to 8,000 yen, as compared with 26,500 yen during April, while exports amounted to 200,000 yen—the first exports of specie since November, 1922, when 170,000 yen worth of specie and bullion were exported.

Warehouse Stocks Show Increase.

Warehouse stocks at the end of May aggregated 478,000,000 yen—an increase of 32,000,000 yen, as compared with the end of the preceding month. The principal increase was in raw cotton, amounting to 16,300,000 yen more than at the end of April. The increase in the amount of Indian cotton alone amounted to 14,900,000 yen in May, while American cotton increased 2,700,000 yen over the amount in stock at the end of the preceding month. Cotton and woolen textiles also showed considerable increases over last month. All the other principal items remained more or less stationary.

Raw-silk stocks at Yokohama on May 31 amounted to 32,000 bales, as compared with 27,000 bales at the end of April. Raw-cotton stocks at Yokohama, Kobe, and Osaka at the end of the month aggregated 29,900

bales, while wholesale stocks of cotton yarn at the two latter ports amounted to 37,700 bales—an increase of 1,000 bales over the amount held on April 30.

Stocks of pig iron on May 10 were reported to be around 135,000 short tons.

Rice, principally the domestic and Chosen varieties, increased 5,000,000 yen over the amount in stock at the end of April.

The following table gives the value of stocks of leading commodities in Japanese warehouses at the end of May, as shown in the Mitsubishi reports for that month, compared with those at the end of the previous month:

Value of principal stocks in Japanese warehouses on April 30 and May 31, 1923.

Cotton	11,200,000	11,300,000			

Silk Market Declining—Cocoon Crop Below Normal.

The silk market, which fluctuated violently during the month of May, was weak and declining as the month closed. Bad weather has reduced the prospective crop of cocoons, so that instead of the anticipated increase many sections are reported to be below normal. As a result of this, the first sale of cocoons, which began at Matsuzaki, brought extraordinarily high prices—the highest for the past 10 years.

The iron and steel market during the month was dull and irregular and the cotton yarn market was weak, owing to the effectiveness of the Chinese boycott. The rice market was active and prices were reported to be advancing. The automobile market was very active during the month and it is reported that June sales are expected to be very large. The lumber market was quiet.

Agreement to Restrict Production of Cotton Yarn.

The production of cotton yarn during May amounted to 194,000 bales, as compared with 195,790 bales during April. The production is keeping well up to that of this time last year, despite the fact that during April 6 companies out of a total of 60 had shut down. The Cotton Spinners' Association has adopted an agreement to limit production from May 15, to remain in effect until the new factory law becomes operative three years hence. According to this agreement, the mills will close down for four days and nights each month and limit factory hours to 10 hours a day. As no penalty is attached, it is expected that this restriction will not be very effective, since many of the large producers are not in sympathy with such a move and will no doubt continue to base their output on the demands of the market. Some of the mills are attempting to tide over the period of slack demand by taking up side lines, such as the spinning of silk yarn.

Coal and Petroleum Production.

Coal production during May amounted to 2,300,000 tons—a slight decline from the output the preceding month. It is worthy of note that Japan, which used to be a coal-exporting country, has for some time imported more than it has exported. Total imports during the first three months of this year amounted to 423,173 tons, while total exports aggregated 348,200 tons—an excess of imports amounting to 74,977 tons.

The production of petroleum during April reached a total of 5,814,000 gallons, as compared with 6,000,000 gallons in the preceding month.

Shipping Active—Fast Liners Proposed.

There was an active demand for shipping space during the month of May and the charter market was somewhat higher than during the preceding month. The number of idle steamers on May 15 totaled 126, with a combined tonnage of 42,000 tons, as compared with 139 ships on April 15 with tonnage aggregating 58,000 tons.

It is reported that the department of communications has decided not to accept the petition of several shipowners to advance the customs duty on the importation of ships into Japan with a view to preventing the price of ships from falling. The purchase of foreign ships has been especially active since the latter part of 1921. So far some 50 vessels, with dead-weight tonnage of 278,333 tons, have been purchased. The subsequent shipping depression caused a temporary cessation of this operation but the gradual revival of shipping since February of this year has caused a resumption of the movement. Up to May 2, 11 vessels of 71,587 tons had been imported.

The shipbuilding industry at the present time is inactive. Only one vessel of over 1,000 gross tons was launched in Japan during the month of April.

Japanese shipping circles are somewhat concerned over the fact that fast American liners are winning the silk carrying trade in the Pacific. In 1918 Japanese boats carried over 80 per cent of all the silk shipped from the country but during the year 1922 they carried only 40 per cent of this class of freight, and at the present time are carrying even less. The silk business is one of the most profitable items in the trans-Pacific trade and has always been the object of keen competition. As a consequence of the loss of this traffic, the Japanese are considering the building of several fast liners in an attempt to regain some part of this lost trade.

INTERIOR DELIVERIES AFFECT CHINESE EXPORTS.

Based on cable from Trade Commissioner Lansing W. Hoyt, Shanghai, June 16.

Forward sales for export are light since deliveries from the interior are being delayed, due to internal disturbances. Exchange is likely to continue its decline on account of decreasing exports. The wheat yield is estimated at 20 per cent below average. The second Canton silk crop is expected to yield about 11,000 bales.

Silver Stocks Decrease—Exchange Declining.

Shanghai bank stocks of silver at present equal $54,000,000—a decrease of $22,000,000 compared with May stocks. The New York bank buying rate on June 15 was $0.7259 for the Shanghai tael and $0.5255 for the Mexican dollar. Decreasing exports are likely to further depress exchange. Silver exchange is reported to be declining and extensive debasement of copper coin is preventing profit through illegal minting.

Province of Kwantung notes have increased slightly in value, now being quoted at 88.5 per cent discount. The Canton Mint remains closed.

Imports of bar silver into Shanghai for May were 7,665, as compared with 5,612 for April. Over 65 per cent of the April imports were furnished by the United States.

Piece-goods Market Quiet—Steel Market Dull.

The cotton piece-goods market remains quiet. The demand is not expected to increase greatly before September. The yarn market is unchanged. The silk market is easier and prices are steady.

The steel market is dull, largely on account of too high American prices and remote deliveries. A small amount is being sold by other nationals, but the demand is limited. Large stocks of galvanized sheets, tin plates, wire, and nails are reported.

Stocks of lumber are small and prices are firm on account of a small supply from the United States.

Wheat and Silk Crops—Shipping Conditions.

The wheat acreage is reported normal. The estimated yield is 20 per cent below the average. The second Canton silk crop is estimated to yield about 11,000 bales and the third crop is expected to increase this yield.

The demand for shipping space is dull. Pacific coast routing is reported stronger for transshipment via the Panama Canal. Tonnage on the Upper Yangtze (above Hankow) is larger than in the previous month.

Foreign competition for the transportation of wood oil from the interior is being resented by the native shippers operating on the river. Exports of wood oil from Hongkong for the first third of this year have exceeded those of the entire year 1922 by $29,054.

General Conditions.

Shanghai building operations are reported less active than last month. The housing situation has very greatly improved. The cost of living, as represented by the Shanghai commodity index number, remained stationary at 158 (based on 1913 as 100). Canton-Kowloon railway transportation is still suspended. Continued unsettled political conditions are reported from South China.

CABLE ITEMS.

British Foreign Trade in May.

Based on cable from Commercial Attaché Walter S. Tower, London, June 14.

Total British trade for the month of May shows an increase over April of £11,090,000, or approximately 7 per cent. Total imports increased £3,062,000 and exports increased £8,684,000, while reexports showed a slight decrease. Thus the excess of imports over exports and reexports was practically cut in half as compared to April. Imports of food, drink, and tobacco increased by £1,850,000 and raw materials £800,000. Exports of raw materials were greater by £2,288,000, and articles mainly manufactured increased £5,879,000, which is the greatest increase for the month.

British foreign trade for May, 1923, and a comparison with April, 1923, and May, 1922.

Imports and exports.	May, 1923.	April, 1923.	May, 1922.
Total:			
Imports	£89,479,000	£86,417,000	£88,814,000
Exports	71,555,000	62,871,000	58,045,000
Reexports	11,773,000	12,429,000	8,965,000
Food, drink, and tobacco:			
Imports	43,631,000	41,772,000	43,075,000
Exports	3,177,000	3,224,000	3,045,000
Reexports	2,187,000	1,592,000	2,152,000
Raw materials and articles, mainly unmanufactured:			
Imports	23,741,000	22,939,000	25,358,000
Exports	14,005,000	11,717,000	8,757,000
Reexports	7,069,000	8,618,000	4,548,000
Articles mainly or wholly manufactured:			
Imports	21,562,000	21,446,000	20,207,000
Exports	52,861,000	46,922,000	45,073,000
Reexports	2,507,000	2,207,000	2,264,000
Animals not for food:			
Imports	136,000	105,000	22,000
Exports	109,000	73,000	178,000
Reexports	10,000	12,000	1,000
Parcel post:			
Imports	409,000	155,000	153,000
Exports	752,000	936,000	992,000

As compared with May, 1922, total trade increased £16,983,000, or approximately 11 per cent. Total imports showed a slight increase in food, drink, and tobacco, and in articles mainly manufactured, but these were nearly offset by a decrease of £1,617,000 in raw materials. Total exports increased by £13,510,000, or 23 per cent. Exports of raw materials increased by £5,248,000, or approximately 60 per cent. Articles mainly manufactured showed an increase of £7,728,000. Parcel-post imports showed an increased of 160 per cent over the previous year.

All Key Commodities Show Increases.

Exports and reexports of cotton piece goods again passed the 400,000,000 square yard mark and set a new high record for this year. Woolens and worsted tissues showed an increase of 3,579,000 square yards and £677,000, while iron and steel increased by 37,000 tons and £1,000,000 over April. Coal exports, the largest on record, increased by 800,000 tons and £1,673,000.

Total exports and reexports of key commodities from the United Kingdom during May, 1923, April, 1923, and May, 1922.

Commodities.	May, 1923.	April, 1923.	May, 1922.
Cotton piece goods:			
Square yards	410,381,000	316,736,000	341,959,000
Value	£13,452,000	£10,315,000	£11,584,000
Woolen and worsted tissues:			
Square yards	16,561,000	12,982,000	16,585,000
Value	£3,150,000	£2,473,000	£3,263,000
Iron and steel:			
Tons	425,000	388,000	273,000
Value	£7,225,000	£6,028,000	£4,831,000
Coal:			
Tons	7,684,000	6,841,000	5,057,000
Value	£10,588,000	£8,915,000	£5,790,000

Large increases are noted as compared with May, 1922, in all commodities except woolens, where a very slight decrease is recorded. Cotton piece goods increased by £1,868,000, and iron and steel by £2,394,000. Coal increased 2,627,000 tons over the previous year and £4,798,000 in value.

Italian Financial and Economic Notes.

Based on cable from Commercial Attaché H. C. MacLean, Rome, June 15.

Increase in Government Revenues.

The revenues of the Italian Government are again showing an increase, and by the end of May had surpassed budget estimates for the whole fiscal year, ending June 30. The revenues for May, 1923, totaled

793,000,000 lire, an increase of 86,000,000 lire over May, 1922. The total for the 11 months ending May 31 amounted to 11,426,000,000 lire compared with 11,315,000,000 lire in the corresponding period in 1922 and with advance estimates for the whole fiscal year 1922–23 of 10,896,000,000 lire.

Unusual Withdrawal of Capital—Business Failures Decline.

Statistics of movement of capital in Italy in May, 1923, show an unusually large amount of capital withdrawn so that in spite of a normal amount of new capitalization a great decrease in net investment occurred. New investments amounted to 383,000,000 lire, while withdrawals totaled 754,000,000 lire, making a net decline of 371,000,000 lire. The total withdrawals in the first four months of the year reached only about 350,000,000 lire. No explanation of this phenomenon has been received as yet.

According to the Turin periodical, Le Procedure Commerciali, the number of failures in May was 434 compared with 462 in April. This is the first instance when a decline has been recorded since September, 1922. In that month failures numbered 274 compared with 297 in the preceding month.

Wholesale Prices Drop—Unemployment Declines.

Bachi's index number of wholesale prices (based on average 1920 prices) for May, 1923, is 92.9, showing a decline from the two months preceding. The April index was 94.2, the March index 94, and the February index 92.8. In May, 1922, the index number was 83.84.

In order to reduce the cost of living, import duties on beef cattle, fresh beef, and tuna fish have been lowered, effective June 12, while smoked and prepared meats, smoked fish, canned salmon, and lard have been placed on the free list. (For details see the tariff section of this issue.)

Unemployment is showing an encouraging decrease compared with previous months and also in comparison with last year. On April 1 the number of unemployed was 280,000 against 328,000 on March 1 and 392,000 on February 1. On April 1 a year ago there were 497,000 unemployed. The present decline is to some extent seasonal, but the number of unemployed on April 1, 1923, is the lowest since June 1, 1921.

Unfavorable Trade Balance Increases.

Both exports and imports continue higher in value this year than last, but the fact that the latter are rising more rapidly than the former causes an increase in the unfavorable balance of trade. Imports in April, 1923, amounted to 1,404,000,000 lire, compared with 1,157,000,000 lire in April, 1922, while exports amounted to 722,000,000 lire and 689,000,000 lire, respectively, for the same months. Total imports through April are 5,486,000,000 lire this year, compared with 4,839,000,000 lire last year, and total exports 3,135,000,000 lire, compared with 2,745,000,000 lire.

COMMERCIAL ASPECTS OF THE FIFTH PAN AMERICAN CONFERENCE.

By Ralph H. Ackerman, Technical Adviser of the Delegation of the United States.

Few exporters in the United States interested in Latin America can fail to commend the efforts exerted at the recent Pan American Conference at Santiago, Chile, to facilitate commercial intercourse between the nations participating. The care with which each question of commercial nature was scrutinized, discussed, studied, and passed upon; the fact that in addition to the United States, Argentina, Brazil, Chile, and Cuba had attached to their delegations certain technical advisers selected because of their intimate knowledge of these affairs, was the best indication of the seriousness with which the more important nations of Latin America entered into these problems.

From a consideration of the results of the entire conference Mr. Augustin Edwards, the Chilean president of the conference, in his final address summed up the work on commercial questions in his statement, "The work of the commerce committee alone fully justified the calling of the present conference."

Conventions Adopted.

Three conventions were adopted directly affecting business relations among the New World countries. The first was a trade-mark convention, a revision of the 1910 convention, designed to meet the objections of those countries which had failed to ratify the original convention because of national laws or prejudices. The articles of the present convention provide for the establishment of two central offices of registration, one at Habana for North America, Central America, Ecuador, and Colombia, and the other at Rio de Janeiro for the other countries of South America. Countries in which registration is desired is elective. A fee of $50 (United States currency) or its equivalent, plus the usual charges fixed by the internal legislation of each respective country, will be charged for each separate registration. Where the owner of a mark has already registered that mark in one country and is refused registration in another country by reason of it having been registered therein prior to his application for registration, he may obtain cancellation of such registration by proving his proprietory rights.

The second convention provides for the publication by all of the signatory countries of the customs regulations of each of the others, and the third convention provides for the use of a more uniform nomenclature in the classification of merchandise in import and export statistics. Commercial interests will be greatly benefited by the application of both of these treaties. They should eliminate the difficulties experienced by business men throughout the United States and Latin America when attempting to ascertain the tariffs under which their merchandise is to be assessed, or to properly interpret the import or export statistics of other nations of this continent.

Resolutions Passed.

Probably of greater importance and of more far-reaching application are the resolutions passed at this conference. Among the most important of these were those on—

Uniformity of shipping and insurance documentation.
Uniformity of principals and interpretation of maritime law.
Uniform parcels post procedure.
Movement of raw materials from one country to another.
Promotion of arbitration of commercial disputes between the nationals of different countries by extralegal procedure.
The calling of a Pan American electrical communication conference.
The calling of a roads conference.
Standardization of specifications of machinery, tools, etc.

A number of others having a less direct commercial aspect were also passed. The importance of those men-

tioned above is immediately apparent, yet only by an analysis of them can their broad scope be appreciated.

As an example, on the subject of "Uniformity of customs regulations" 17 distinct points were covered, each of which applies to acute difficulties now existing. In an effort to overcome the many complaints made against the practice of assessing heavy fines by some countries because of slight errors clearly clerical in nature and not designed to defraud in consular or commercial invoices a resolution was passed by which the signatory countries agree to observe reasonable tolerance in the application of this law. Another point provides that when satisfactory evidence has been furnished packages not destined for the port in which they have been landed may be reshipped upon satisfactory guarantees. In the future the countries of Latin America agree to consider at the time of enacting new tariffs or taxation to consolidate all port dues in total amounts or to make these subject to a definite scale based on the tonnage and service rendered or benefits received.

This should prove of great assistance to those exporters having their principal business with countries where, in addition to consular charges, several other taxes are imposed for lighthouses, port works, etc. That facility should be accorded to international transit of foreign merchandise through different countries is the subject of another point of this resolution, and it was also agreed that provision should be made for full security to exporter or carrier or agent against delivery of "to-order" shipments without indorsed bills of lading. Another item of great interest to American exporters is point 11 of this resolution, providing that "the proper customs authorities should indicate, in case their advice is asked through chambers of commerce or consular officers, and the sample of any article of importation is submitted, the classification, appraisal, and duties to which such article is subject." It is also recommended that catalogues of American exporting houses should be exempted from customs duties and that necessary steps should be taken to facilitate the refund of bond deposited in any customhouse through which merchandise provisionally entered is reexported.

An international conference on motor roads, to be held at a time and place selected by the Directorate of the Pan American Union, has for its subject the careful study of the road problems of Latin America for better transportation facilities between their ports and inland cities. This is to be wholly a technical conference, called only after careful surveys have been made, and discussions are to embrace means of financing as well as the actual construction.

Spirit of the Conference.

The efforts to eliminate existing barriers to inter-American commerce was concerted; each of the delegates of the 18 countries present carefully weighed the question under discussion in its relation to existing laws and policies of his Government and only assented after due deliberation had been given to ways and means of making effective, within his country, the recommendations passed upon.

Possibly the greatest obstacle in the past to the successful fruition of the acts of economic conferences has been the failure to provide means for carrying through their programs. With this in mind, the Fifth Pan American Conference requested the Inter American High Commission to cooperate toward the drawing up and enforcement of the program of this conference in so far as it bears directly on the purposes and work of the Inter American High Commission. As all of the commercial questions mentioned above come within the scope of the commission it is reasonable to expect that before the next conference is held many of the vexatious problems of the present will have been solved.

Aside from the actual accomplishments of this conference, possibly of equal significance was the manner in which economic questions were approached. A spirit of frankness, an earnest desire to cooperate, an inter-American viewpoint characterized the proceedings of each of the committees considering these matters, and it can not be doubted that each delegate returned to his country with a better understanding of the community of interests with his neighbors and a greater appreciation of the full meaning of inter-American friendship than ever before.

TREATIES AND TRADE AGREEMENTS OF SOVIET RUSSIA.

Prepared in the Eastern European and Levantine Division.

Several general treaties and several special trade agreements have been entered into between the Soviet Government and various European countries. It must be understood, however, that the conclusion of these treaties and agreements did not in any case reestablish free commercial intercourse between the nationals of the contracting parties. The foreign trade of Russia continues, irrespective of these agreements, to be carried on by the Soviet Government through the instrumentality of official and semiofficial organs designated by it, so that free commercial dealings with Russian business men or firms are barred to the nationals of contracting parties equally with those with whom no agreements are in effect.

Provisions for resumption of trade virtually mean merely that the soviet authorities may maintain buying and selling agencies in the given foreign country; that nationals of the country may enter Russia for the purpose of dealing with the soviet authorities; and, further, that goods and remittances may be received, deposited, and consigned by such delegations without any interference on the part of the contracting governments. However, official and semiofficial trading agencies of the Soviet Government are maintained and carry on business in the United States, France, Italy, Sweden, and other countries with whom no trade agreements are in effect, and the nationals of such countries are free to enter Russia on the same basis as those of Great Britain or Germany.

The principal countries with which the Russian Soviet Government has thus far entered into treaties having both a political and economic character are Germany, Austria, Great Britain with Canada, Denmark, Finland, Poland, Czechoslovakia, the border succession States of Latvia, Esthonia, and Lithuania, Norway, and Turkey.

Treaties in Force With Germany and Austria.

Soviet Russia and Germany signed a provisional agreement on May 26, 1921, pending the conclusion

of a future trade treaty. The principal provision of this agreement was the attachment of commercial missions, for the purpose of developing economic relations between the two countries, to the then existing delegations for aid to prisoners of war of both of the contracting parties. The agreement went into force on the day of its signature.

The treaty of Rapallo between Germany and Russia was signed April 16, 1922, and exchange of ratifications was effected January 31, 1923. The principal provisions of the treaty are the resumption of diplomatic relations between the two countries; the renunciation of claims on the part of both contracting parties for compensation of losses due to the war; and the renunciation by Germany of claims arising out of the nationalization or confiscation of property of German citizens by Russia, provided Russia does not satisfy analogous claims proffered by any other country. The treaty provided for further negotiations toward the conclusion of a series of economic and trade agreements. The first special agreement under the treaty was a convention signed April 23, 1923, regarding the exchange of ships interned in their respective ports during the war.

The Republic of Austria signed a provisional treaty with the Soviet Republics on December 7, 1921, the object of which was stated to be the provision of suitable channels for practical, political, and commercial intercourse. Russia's ratification of the treaty was delivered February 15, 1921, and Austria's ratification February 14, 1922. It was broadly similar to the German agreement of 1921. A special reciprocal commercial agreement under this treaty is pending at the present time.

Trade Treaties with Denmark and Norway.

A trade treaty was signed between Denmark and Soviet Russia on April 23, 1923, and ratified on June 8 by Denmark. It involves de facto recognition of Soviet Russia; mutual exchange of representatives with diplomatic and consular privileges; full economic and commercial relations; mutual access to all transportation facilities, telegraphic, radio, postal, and aerial communication; and guaranties for the mutual protection of persons and property of nationals of each of the contracting parties. The treaty provides reciprocal most-favored-nation treatment in regard to commercial rights and privileges, duties, and restrictions on foreign trade, transportation, and shipping.

Important exceptions are provided for, however, on both sides. For instance, Denmark can not claim such special privileges as Russia might grant a country which has recognized it "de jure" or which might do so in the future, unless Denmark is willing to allow Russia corresponding concessions. This agreement does not entitle Denmark to claim such special preference as the Russian Soviet Government grants to the States adjoining Russia in Asia, nor can the Soviet Government claim such preference as Denmark grants only to Norway, Sweden, or Iceland.

In a "Declaration Concerning Claims," which was made an integral part of the treaty, each of the parties declared that it upholds all of its own and its citizens' claims on the other party with regard to property rights or with regard to obligations which present or former Governments of each of the parties have contracted; and that the treaty in no respect shall settle in advance or prejudice any existing claim to payment of compensation or to restitution, nor in any way place these claims in a less favorable position than the claims of the Government or citizens of any other country.

Norway and Soviet Russia signed a preliminary trade agreement September 2, 1921. The agreement was based on the British-Russian pact, and provides for the negotiation of a commercial treaty. The treaty was ratified by Norway September 30, 1921.

Peace Treaties with Baltic States—Turkish Treaty.

By the treaty of peace between Finland and Soviet Russia, signed October 14, 1920, and ratified December 31, 1920, the resumption of economic relations was provided for and carried out under the separate agreements of June 1, 13, and 22, 1922, August 12, September 30, and October 21 and 28, 1922, pending the negotiation of a commercial agreement. The treaty of peace between Poland and Russia and the Ukraine of March 18, 1921, provided measures for the resumption of trade pending the conclusion of a formal trade agreement.

Peace treaties were concluded by Soviet Russia with Esthonia on February 2, 1920, with Lithuania on July 12, 1920, and with Latvia on August 11, 1920. These provided for the subsequent consummation of commercial and consular conventions.

The treaty with the Turkish Nationalist Government and Russia was signed at Angora on March 16, 1921, and exchange of ratification was effected September 22, 1921. Provision was made for the negotiation of a commercial treaty, under the terms of which conventions between the two countries were signed July 9, 1922, providing for direct railway communication over the line Moscow-Tiflis-Alexandropol-Kara, and for postal, telegraph, and consular relations.

Trade Agreements with England and Czechoslovakia.

The Anglo-Soviet trade pact was signed March 16, 1921, and considered in effect from that date. The principal provisions were the removal of all obstacles placed in the way of resumption of trade up to that time, freedom of shipping, mutual trade representation, the sanctioning of the export of gold and securities, mutual protection of the nationals of the contracting parties, and discussion of claims in a formal treaty. By an exchange of notes July 3, 1922, between the British Foreign Office and the Russian Trade Delegation in London, a Soviet-Canadian trade agreement was made. The note of the British Foreign Office merely stated Canada's desire to adhere to the terms of the Anglo-Soviet agreement of March 16, 1921. The Soviet reply agreed to the arrangement and regarded it as complete and having full effect as of July 3. The Canadian Government authorized the appointment of a trade commissioner to Russia to investigate openings for Canadian trade under the Anglo-Russian agreement. So far, however, no Soviet trade delegation has been received by Canada.

A commercial agreement was entered into with Czechoslovakia by the Soviet Government and the Ukraine on June 5, 1922. The treaty was ratified by Russia on June 22, 1922, and by the Czecho-Slovak Government on September 23, 1922. Citizens of each of the contracting States enjoy most-favored-nation privileges and facilities are given for commercial intercourse on the basis of reciprocity. No consular representatives have been sent to Russia by Czechoslovakia.

Unratified and Pending Agreements.

A preliminary Italian-Russian commercial agreement was signed on December 26, 1921, similar to the

Anglo-Russian agreement and providing for the negotiation of a commercial convention. The treaty was not ratified, however, by Russia.

Soviet Russia and Sweden signed a preliminary trade agreement on March 1, 1922, but the agreement was rejected by the Swedish Riksdag on the ground that it involved "de jure" recognition of Soviet Russia and that it did not provide for reimbursement of Swedish nationals whose property had been confiscated in Russia. New negotiations are in progress which look toward redress of Swedish claims in connection with property losses in Russia.

Renewal of commercial relations between Russia and Persia is provided for in an agreement of February 26, 1921, which was not ratified by Russia. Negotiations were resumed on March 11, 1923.

Status of Swiss Relations with Russia.

The status of commercial relations between Switzerland and Russia was outlined by the Federal Council of Switzerland as follows, in reply to a demand for information on the subject:

The Federal Council had given the most careful consideration to this matter, but the general conditions in Soviet Russia and the negative results of the conferences in Genoa and The Hague had not induced it to accept the view that the resumption of diplomatic relations with Soviet Russia would be advisable. Switzerland, furthermore, should not ignore the attitude of other countries regarding this question.

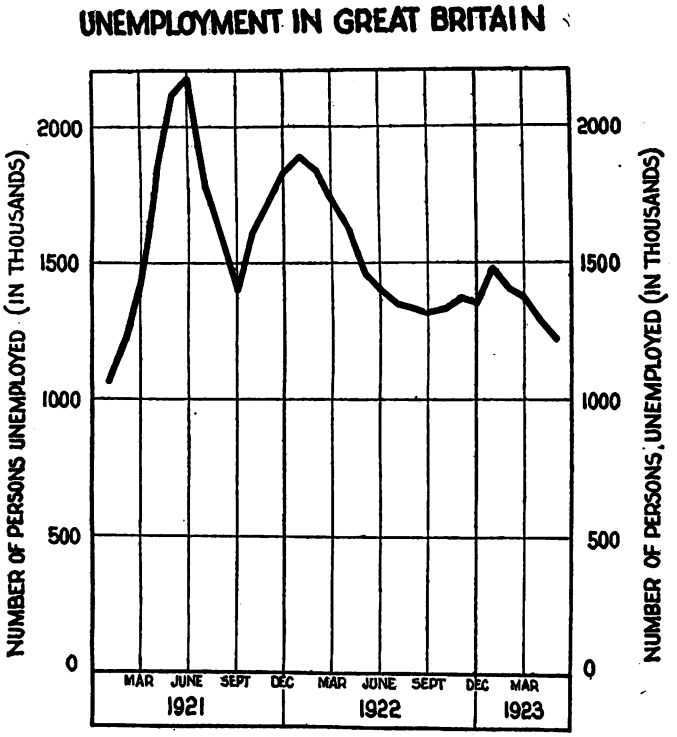
The Federal Council, nevertheless, in response to the wishes and attempts of Swiss business men, has not hindered these from entering into private commercial undertakings with Russia. In fact, the Federal authorities have attempted to assist them as much as possible. For instance, an official delegation from Soviet Russia was recently permitted to enter Switzerland to purchase cattle. It must, however, be stated that the soviet authorities have not responded to these attempts of the Swiss Government with any great advances, and from the Swiss viewpoint it is absolutely necessary that the question of indemnifying Swiss citizens for their losses in Russia should be settled.

No Formal Relations with the United States.

No treaties or agreement of any kind have been concluded between the United States and the Soviet Government. In the summer of 1922 a proposal was made by the State Department to send an official American mission to Russia to study economic conditions in that country. This mission was not undertaken, owing to the fact that the Soviet Government insisted on making irrelevant counter proposals and injecting various issues into the discussion which were beyond the sphere of the proposed investigation. However, no official restrictions have been placed on American trade with Russia, and trade between the two countries is being carried on without any interference on the part of the Government of the United States. Certain official and semiofficial trade organizations of the Soviet Government are operating in New York and other cities of the United States—such as the Centrosoyous, Arcos, and others (see COMMERCE REPORTS, November 27, 1922, p. 563).

UNEMPLOYMENT IN WESTERN EUROPE.

Alan G. Goldsmith, Chief, Western European Division.



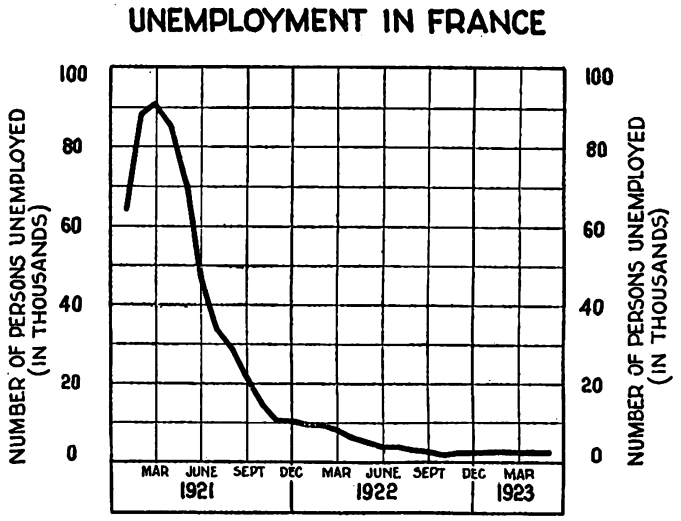
The business executive is accustomed to following closely the unemployment situation as an indicator of industrial conditions. Unemployment is intimately connected with the business cycle and with world trade, and shows certain seasonal tendencies which are fairly recurrent and can be estimated in a general way in connection with the other industrial factors. In western Europe these considerations must be regarded in the light of postwar events which have dislocated economic trends in that territory.

In many countries of western Europe, particularly those which have not returned to financial stability, industrial development and employment are dependent on currency fluctuations rather than on the basic situation in world commerce. In others the inability to dispose of surplus population, owing to immigration restrictions on the part of those countries which had formerly taken a considerable portion of surplus workers, has affected the labor market. The actual reconstruction, which occurred in some of the combatant countries since the war, gave a temporary impetus to industry for a certain period, and thus created artificial conditions which are not permanent.

The figures used in the following outline of unemployment are compiled on different bases in each country and do not always indicate the total number unemployed. However, they show the trends quite accurately and for this reason can be used as indicating tendencies in the countries covered.

Unemployment Britain's Greatest Problem.

Great Britain has made enormous strides since the armistice along financial, commercial, and industrial lines. Unemployment is now the basic difficulty. Although at the present time industry is working almost to capacity, the live unemployment registers show a million and a quarter persons out of work, and, as a matter of fact, it has been estimated by certain experts that the actual total unemployment in that country is now almost one and three-quarter millions.



Figures show number of persons listed on live unemployment registers, including both men and women. All persons who have done a minimum amount of work in the preceding eight months and are afterwards unemployed can be registered.

Causes of Unemployment.

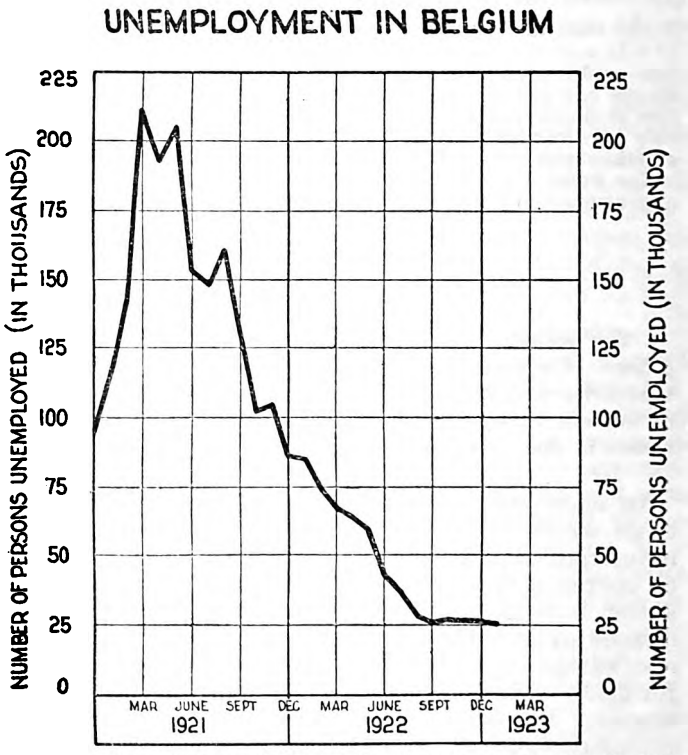
This problem in Great Britain seems to be based on several factors aside from the one commonly mentioned—that the population is growing beyond the industrial capacity of the country to support it. During the war women and minors were employed in various industries and are still employed to a considerable extent. A large proportion of the pre-war idle class has been compelled to seek productive employment. Much of the land that was plowed up during the submarine blockade has been allowed to go back to pasture, and surplus farm laborers are also drifting into the ranks of the unemployed in a steady stream. All these causes together have their effect upon the present situation.

There have been considerable fluctuations in the unemployment situation in this country since the armistice. In 1919 and the first part of 1920 the demobilization of troops, together with the shutdown of munition works, increased the number of unemployed to a great extent. During 1920 these persons were steadily employed in industry, but in 1921, owing to the widespread business depression, unemployment, which had dropped to less than a million, went over two million in midsummer. There has been a continual but slow re-

Figures include list of unemployed men and women receiving Government assistance only. It is estimated in the recent months that the total number of unemployed is five or six times as great as those thus listed. For example, agricultural labor is not covered.

duction since that time with the exception of the winter months of 1921–22 and 1922–23.

Emigration Proposed as a Remedy.



Opinions differ considerably as to the remedy for this situation. Some believe that it will be corrected in due course of time by new commercial and industrial developments, but a large percentage of expert opinion seems to indicate that the only remedy is emigration. The matter may be brought up at the Imperial Economic Conference next fall; and if so, there will be the inevitable disagreement between Great Britain and the Dominions as to the type of emigrants to be sent out. Efforts are already being made to dispose of certain portions of the surplus population, but cooperation between the mother country and the Dominions will be necessary in order to execute such a program on a large scale.

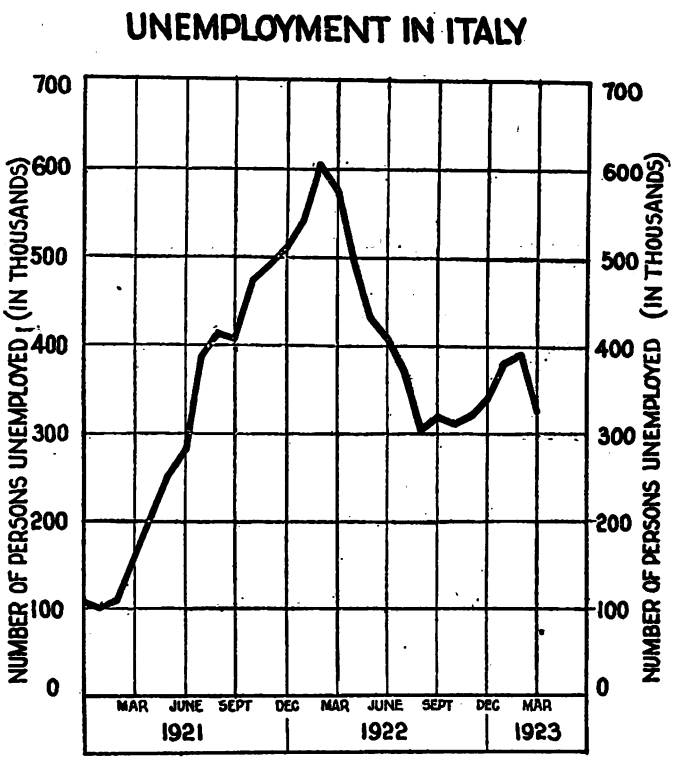
No Surplus of Labor in France.

The situation in France is fundamentally different from that in the United Kingdom. The static population, combined with a large standing army and a consequent diversion of men from productive labor, results in a high percentage of employment there as against considerable basic unemployment in Great Britain.

Immediately after the war France did not experience the difficulties of certain other European countries in placing its labor. A large portion of the French industrial section had been destroyed, but reconstruction was begun immediately, with a resultant employment of men both in the devastated area itself and in the industries, which expanded in order to carry out the reconstruction. Finally, demobilization was not so rapid or complete in France as was the case in neighboring countries.

However, the world-wide industrial depression affected even France, beginning in October, 1920, and reaching its peak in March, 1921. Since that time a steady improvement has occurred. At present not only is there practically no unemployment in the country, but it has been actually necessary to import Polish and Italian labor.

Figures represent Government census of workmen unemployed, both men and women.



Belgian Situation Similar to French.

There are certain phases in the Belgian industrial and labor situation which are unique. The country is so small in area and so densely populated that it is possible for workers to reach almost all sections of the country in a very short time. Thus labor can be utilized more effectively here than perhaps anywhere else in Europe. As a result there is practically no seasonal fluctuation in employment. The workers can engage in agriculture during a portion of the year and be employed in industrial organizations at other periods.

Industry and finance in Belgium in general are very closely connected, so it is not surprising to see that the peak of unemployment, following the course of the industrial depression, was reached in this country in March, 1921, and that since that time there has been a steady decrease, as was the case in France.

Seasonal Trends Pronounced in Italy.

In contrast to France, Italy, with its increasing population and its comparatively small resources, is forced to take care of its surplus by emigration. Were it not for the efforts made to dispose of labor outside the frontiers, this country would be continually faced by a surplus labor supply. The seasonal feature of unemployment is very marked, the winter months invariably showing increases. This is due to the fact that southern Italy is primarily agricultural, and not only those engaged in agriculture itself but also a large number occupied in building trades and outdoor activities are normally unemployed in the winter months.

Figures show all unemployed laborers (men and women) registered with the Government Labor Office. Figures not completely accurate. The trend, however, is well illustrated.

Unemployment figures show that toward the close of the year 1920 industrial activity in Italy was at its height. In spite of the fact that beginning with November there should have occurred the normal increase of unemployment, the figure remained practically stationary until the spring months, indicating increased industrial activity. In the spring, in spite of the regular seasonal decrease of unemployment, a large increase took place which continued until February, 1922. The seasonal growth of unemployment during the winter of 1921–22 was extremely abnormal, indicating that the peak of the industrial depression was reached in Italy in the latter part of 1921. Since February, 1922, a steady improvement has been noted.

German Unemployment Depends on Mark Exchange.

In Germany industry has not been operating on a sound commercial basis. Wages, costs, and prices have all been based on the fluctuations of the continually depreciating mark. Fictitious paper profits and the resultant ability to undercut world prices at certain periods on account of the spread between the world market value and the internal purchasing power of the mark have made this possible. German figures, therefore, do not necessarily reflect real prosperity with a resultant ability to absorb foreign goods but simply a "catastrophy boom" induced by depreciating exchange.

Early in 1919 there was a sharp rise of unemployment in Germany due to the overthrow of existing political organizations and the change of economic conditions generally. Then came a gradual return to increased industrial and trade activity, especially as progressive depreciation of the mark offered opportunities for competition in world markets. Early in 1920, however, when the German mark experienced a temporary rise, the unemployment rate from April

Figures from Reichsarbeitsblatt. They represent unemployed members of trade unions only and include both men and women. Trade unions comprise 85 per cent of total laborers.

to July increased threefold. An increase in the exchange brought with it industrial depression.

From 1920 on the "catastrophy boom" of Germany became more and more pronounced, with the exception of a short period in December, 1921, and January, 1922, when the mark was momentarily stabilized. However, toward the end of 1922 and early in 1923 wages, costs, and prices began to catch up with the fall of the mark. The spread between the internal purchasing power and the external value became less pronounced, even though the mark was depreciating more and more rapidly. Combined with this, the lack of Ruhr coal, uncertainty on the part of foreign buyers, and disorganized transportation conditions forced unemployment to higher figures in spite of the rapid depreciation of the mark itself. Germany has apparently reached a position where it is no longer possible to benefit industrially by a depreciation of currency, because future depreciation is anticipated to a great extent by a rise in costs.

Austrian Reorganization Shifts Government Employees to Industry.

The trend in the Austrian situation was similar to that in Germany until financial stabilization occurred. Immediately after the war there was considerable un-

employment, but this was later reduced as Austrian industry could operate at a paper profit in view of the depreciating crown. In the fall of 1922, however, the stabilization program was begun, and the crown has been steady since that time. The result was that the spread between the external and internal values of the crown was taken up, costs increased, industry suffered a temporary collapse, and unemployment rose rapidly until it reached its peak in January, 1923.

There was a further complication in the abnormally large number of Government employees in Vienna, where the Government machinery, orginally established for the purpose of administering the entire Austro-Hungarian Empire, had not been reduced in proportion to the enormous loss of territory. In the reorganization large numbers of these employees are being released and a place must be found for them in commerce and industry. From January to the present time a steady improvement has been observed, indicating that internal conditions are being reorganized on a world-price basis.

Unemployment Following Stabilization Diminishing in Czechoslovakia.

Immediately after the war the establishment of the Czecho-Slovak Republic and the entire industrial reorganization in that territory naturally resulted in considerable unemployment. The depreciation of the Czecho-Slovak currency increased industrial activity, and, therefore, reduced for some time the number of unemployed. It was soon realized, however, that a policy of financial inflation could not bring any lasting benefits either to industry or to labor. The stabilization program was put through. Its immediate result was industrial depression and an increase in unemployment, which was very pronounced especially in view of the fact that some of the chief markets of the country had lost their ability to absorb high-priced goods. The program, however, was continued and the economic readjustment within the country progressed favorably. Thus at the beginning of 1923 unemployment reached its peak and continued through the first quarter of the year. In April it began to decrease and has been showing satisfactory though slow progress since that time.

Loss of Markets Depresses Scandinavian Industry.

After the armistice the Scandinavian industries, which had all worked at a high pitch during the war, first suffered from the short post-war depression. Later these countries were further hampered by the fact that their exchange had not depreciated to any great extent, whereas they were surrounded by countries which not only were their competitors but also constituted their principal markets, and all of which had started on a period of inflation. As a result, difficulty was experienced in selling the local products to countries with decreasing purchasing power, and, moreover, all Scandinavian industries had to meet competition, especially from Germany. A decrease of wages in order to meet world market conditions, combined with an increase of prices of commodities, especially from Great Britain and the United States, essential to the population, have resulted in considerable labor unrest, a reduction of production, and an increase of unemployment.

Dutch Employment Affected by German Competition.

Dutch industries, like those of Scandinavia, suffered because the country was surrounded by neighbors with a depreciating exchange, whereas the Dutch currency has been at or near par ever since the end of the war. For this reason unemployment has been a serious problem in the Netherlands during the entire period. Industries suffered primarily from German competition, and the efforts to keep costs, including wages, down to world market levels has resulted in intermittent strikes and lockouts. The decrease of Rhine coal shipping and the difficulties encountered by the Dutch in shipping in general have accentuated the difficulty.

Since the Ruhr occupation there has been an improvement in the industrial situation, with resultant decrease of unemployment, mainly due to the elimination for the present of German competition.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

MARKET FOR CANNED MILK IN HONGKONG.

Consul William J. McCafferty, Hongkong.

Hongkong is one of the few communities in the Far East which has a modern fresh milk supply. For this reason the European population of the colony does not use as much canned milk as in other populous cities of the Orient. However, large quantities of canned milk are used in Hongkong and tributary territory, especially by the natives. Hongkong is an important distributing center for canned milk, its trade in this commodity covering South China, Middle China, French Indo-China, Formosa, and other important territory.

Canned milk has been an important article of importation from the United States for many years, and it is believed that the demand will gradually increase as the standard of living of the Chinese improves and the people become better educated to its use.

United States Principal Source of Supply.

Imports of canned milk into Hongkong, including condensed, evaporated, and concentrated milk, canned cream, etc., were valued at approximately $2,054,000 in 1920, $1,105,000 in 1921, and $1,250,000 in 1922. (Pound sterling converted at $4.61.) Of the 1922 imports, the United States and Australia furnished the greater part. Milk from the United States was valued at $633,479 and from Australia at $393,611.

The value of imports from the United States declined during the past three years, as did the value of total imports from all countries. In the early part of 1920 trade in all lines was booming, but toward the end of that year the general post-war business depression was felt in China, causing a falling off in purchasing power. This depression continued during 1921, which accounts for the decline in milk imports. In addition, the price of milk was reduced in 1921, causing a reduction in value greater than the reduction in the number of cases imported.

While the value of all milk imported in 1922 increased over that of 1921, the value of milk imported from the United States decreased. This was caused largely by the increased importation from Australia

and the Scandinavian countries of good quality milk at very low prices. These importations have had little effect on the sales of established American brands but they have to a large extent prevented the importation from the United States of comparatively new and unknown brands. It is apparent that American manufacturers have not been able to meet the low prices at which the Australian and Scandinavian milks are sold.

Two-thirds of Imports Reexported—Local Stocks and Sales Methods.

The value of canned milk exported from Hongkong was approximately $1,445,000 in 1920, $869,000 in 1921, and $835,000 in 1922. (Pound converted at $4.61.) The export figure for 1922 is almost exactly two-thirds of the total imports. Approximately 90 per cent of the 1922 exports went to South China, French Indo-China, and Middle China, the remainder going to North China, Japan, Chosen, Formosa, the Philippine Islands, Straits Settlements, and other countries.

Large stocks are always carried in Hongkong by the large companies having branches in that city, and occasionally stocks are kept by some of the import houses acting as manufacturers' representatives.

Some of the manufacturers have exclusive local agents who canvass the territory supplied from Hongkong, others employ both agents and brokers, and others rely solely on local brokers for the sale of their products. There are three principal methods of selling canned milk. Some of the larger manufacturers sell from stocks carried in Hongkong. Others sell on indent orders, with quotations usually in gold dollars. Still others do business by direct orders and sales from the United States and various European countries.

Present Condition of the Market.

The market improved steadily from 1920 up until about nine months ago. At present and for some time past the uncertainty throughout South China has caused a temporary slump in the market. The uncertainty of shipments has caused local exporters to be very cautious about sending goods into the interior. The retail market in the Colony of Hongkong is practically unaffected, except in so far as the virtual cessation of business with the interior has tightened the money market and consequently reduced the buying power of consumers.

Chinese consumers use sweetened condensed milk almost exclusively. A small quantity of evaporated milk is used by foreign-educated Chinese, but it will probably be many years before evaporated or natural sterilized milk and milk powders will be used to any great extent by the Chinese consuming public. Condensed milk is used by up-country natives particularly for infants and the aged.

Prospects for Increased Sale of American Milk.

Prospects for increasing the sale of American milk are very good if American manufacturers can sell high-quality milk at a price competitive with the European product. The Chinese are very critical concerning their condensed milk and prefer a very white grade. Any attempt to sell even slightly caramelized sweetened condensed milk would prove disastrous to both present and future trade.

In addition, a manufacturer wishing to sell large quantities of tinned milk in Hongkong and South China should carry on an extensive advertising campaign, both locally and in the interior districts. The advertising is usually done by posters liberally distributed in conspicuous places. A well-known brand is a very important factor in selling foreign merchandise among the Chinese.

Sugar Companies of Java.

The Bureau of Foreign and Domestic Commerce has received a list of the sugar companies of Java, with statements of production and finances from 1912 to 1921. Interested persons may borrow this list on application to the Foodstuffs Division.

Czechoslovakian Pâté de Foie Gras Offered.

A Czechosloxakian firm, manufacturers of pâté de foie gras, wishes to obtain representation in the United States for the handling of its product. Further information may be obtained from the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce or from any of its district offices.

Cuban Fruit Exporter Desires Connections.

A Cuban firm of exporters wishes to get in touch with importers in the United States handling pineapples and other fruits produced in Cuba. Further information will be furnished by the Foodstuffs Division or any district office of the Bureau of Foreign and Domestic Commerce.

Notes on Food Products.

Proposed Agrarian Measures in Italy.

The Italian Government is formulating agrarian measures, including farm credits, phosphate imports, and a protective tariff on grain, calculated to increase the country's cereal production by 10 per cent. (Alfred P. Dennis, special representative of the Department of Commerce, Berlin, May 31.)

The Clove Crop of Madagascar.

The clove crop in Madagascar for the 1923–24 season (October to February) may total 750 tons, according to advices from the local government. Of this amount 500 tons are for the island of Ste. Marie, 230 tons for the Province of Tamatave, and 20 tons for the Province of Maroantsetra. These figures are very early, and therefore represent an indication rather than an estimate. (Consul Alfred T. Burri, Tananarive.)

Coffee Crop Estimates of the Dutch East Indies.

A well-informed firm exporting East Indian coffee places the total coffee crop of the Dutch East Indies for 1922 at 802,585 piculs, or 109,279,974 pounds. The same firm estimates the 1923 crop at 963,933 piculs, or 131,249,117 pounds. It is the opinion of these exporters that the short crop of 1922 was caused by the coffee beetle. However, the authorities took immediate measures to control this pest, and have been so far successful that coffee dealers expect no damage from the beetle in the future. (Consul Charles L. Hoover, Batavia.)

New Margarine Factories in Germany.

Within the past half year about 50 new margarine factories have been organized in Germany, according to the "Margarinezeitung" of Berlin. Most of the new factories are located in northwestern Germany. Promoters who organize these enterprises are still active. However, they do not call the attention of their

customers to the difficulties encountered in the margarine industry, chiefly the large capital required even for a small plant and the risk from trade depressions and fluctuations. The "Margarinezeitung" warns the German public not to engage in more margarine enterprises, since the number of factories now in existence is sufficient to supply all Germany and the border States with margarine. (Consul George D. Hopper, Hamburg.)

Sales of Brazilian Sugar for Future Delivery.

About April 1, 1923, practically all the sugar mills in the State of Pernambuco agreed to deliver through a bank in Pernambuco 450,000 sacks of demerara sugar of 94, 95, or 96° polarization, to be sold abroad. Each sack contains 60 kilos, making a total of 27,000 metric tons of sugar involved in the transaction. The producers' price agreed upon is from 10 to 11 milreis per arroba of 15 kilos. This is equivalent to 3.3 cents per pound at the exchange rate of 9 milreis to the dollar. Deliveries abroad will be made in October and November, 1923. It is rumored that most of the sugar involved will be shipped to the United States.

Demerara sugar is the lowest grade of commercial importance made by sugar mills with modern equipment. It is yellow in color and polarizes at from 91 to 96°. It is usually shipped abroad to be refined. (Consul C. R. Cameron, Pernambuco.)

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, western Europe: Cold weather damages crops in Belgium.
Cable review, eastern Europe:
Greek production of cheese and potatoes.
Rumanian cereal exports and acreage.
Cable review, Far East:
Chinese wheat crop.
Grain and rice stocks in Japanese warehouses.
Far East: Ceylon's tea industry enjoys prosperous year.
Latin America: Brazilian agriculture and foreign trade.
Tariffs and trade regulations:
Canada—Increased duty on raisins deferred.
France—Export restrictions on oil-cake.
France—Restrictions on importation of borax-cured meats.
France—Export restriction on straw and fodder removed.
Portugal—Limited importation of wheat permitted.
Salvador—Export duty on sugar reimposed.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

THE NECESSITY OF SELLING EFFORT.

So long as specialty manufacturers allow their minds to become filled with thoughts of disturbed conditions in foreign markets, abnormal exchange rates, and cheap foreign production, they will fail to make the most of their export trade. Their problem is to convince the foreign purchaser that he and the people he sells to want American specialties. In other words, the American manufacturer of specialties should concentrate on selling effort, for once real demand is created the foreign buyer will find a means of paying—and paying in American money.

FOREIGN MARKET FOR AMERICAN JEWELRY.

The Chinese Market for Cheap Jewelry.

The Chinese prefer ornate, heavily embossed jewelry to that of simple design, reports Trade Commissioner Lansing W. Hoyt from Shanghai. Chinese rings are clumsy as compared with those of American manufacture, the stones being very large and the settings extremely crude. The preferred style of scarf and tie pins are those with gem and stone settings. Jade and semiprecious stone settings can be obtained so cheaply in China that pins of this kind are universally worn. The most salable cuff links for the general trade are those priced under $1, Mexican, per pair.

Chinese women are very fond of jewelry, particularly rings, bracelets, wrist watches, earrings, hair ornaments, and ornamental combs. The fact that they do not wear hats encourages more fastidiousness in their hairdress, which creates a bigger demand for ornaments of this kind. Earrings and hair adornments set with imitation pearls and jade are very much favored. It might be worth while for American manufacturers to investigate the feasibility of duplicating these native types of goods.

The larger portion of the jewelry trade is in the hands of native gold and silversmiths who can make real silver and gold ornaments at the same, and even lower, prices than those charged for gold-filled or electroplated articles imported from other countries.

Chinese tastes in jewelry differ radically from those of Americans and Europeans. As a result the market in China for American goods of this class is practically limited to the foreign colony and to the comparatively few Chinese who have been abroad and have developed a liking for foreign articles. Naturally there is considerable demand for the products of American jewelry manufacturers among the 10,000 Americans and 25,000 Europeans now residing in China, but the interesting variety of wares produced by Chinese gold and silver smiths command an appreciable amount of the business among foreigners even in small articles of dress and novelties.

Business in cuff links, collar buttons, scarf pins, belt buckles, and similar articles has not up to the present been developed to any extent among the native population. This is due to the fact that the great majority of Chinese still retain their native costume, which does not permit of or necessitate such ornaments. Chinese taste is not favorably inclined to imitation jewelry, the opinion being prevalent that a loss of prestige is suffered by the wearer.

The custom of sending gifts for Chinese holidays, festivals, weddings, and birthdays is a noteworthy factor in the jewelry and silverware trade.

More American Clocks Being Sold in Great Britain.

The outstanding feature of British imports of clocks for the first three months of 1923 was the great increase in the number of American clocks imported, there being 33,190 purchased during January, February, and March, 1923, as compared with 8,096 and 31,627 for the same periods of 1922 and 1921. It should be stated, however, that the average value of the American clocks imported for these periods has fallen from approximately 11s. in 1921 to 5s. in 1923. (Alfred Nutting, clerk in American consulate, London.)

AMERICAN MOTION PICTURES ABROAD.

The Cuban Motion-Picture Market.

American motion-picture companies have recently taken an increased interest in the Cuban market and the promotion of films made in the United States has been pushed energetically, reports Consul General C. B. Hurst from Habana. American companies now manage two of the largest motion-picture theaters in Habana and capital has been invested in smaller distributing companies. This activity has increased the predominance of American films in Cuba.

There are at present 300 or more motion-picture theaters in Cuba. In addition, many of the sugar mills have facilities for and exhibit pictures. Many of the theaters sprang up during the period of good times in Cuba and operated successfully so long as theatergoers spent freely on this form of entertainment. A small number of these theaters are now closed, while some give performances on Saturdays, Sundays, and holidays.

The films that are selling best at the present time are wild-west pictures and " features." The film that made the most money recently was a feature which was advertised systematically many months in advance.

German films threatened at one time to be serious competitors of American films, but owing to bad exploitation and the fact that a number of their older productions were sent to Cuba, they have not continued to sell. A few French films have been imported, but not in quantities to compete seriously with American films. Recently a number of historical dramas imported from Italy have been shown.

Big features are sent into the interior of the island on a percentage basis. This percentage is about 75 per cent to the distributor and 25 per cent to the theater, and is seldom less than 50 per cent to the distributor for the first showings. They are sent out from Habana with a company's representative, making a tour of the island, showing at the principal cities between Habana and Santiago. On the return trip the smaller towns and suburbs are played. Some of the large American companies have branch houses in Santiago, working under the supervision of the Habana office. To these branches films that have worked the city of Habana and have brought in the largest amount of money of which they are capable are sent, and from there rented at any price obtainable in the small towns and sugar centrals.

Ordinary films in Habana are rented out in " programs." A program consists of a feature, a two-reel comedy, and a news reel, or a cartoon, making a program of from 10 to 13 reels. The prices for programs vary from $6 to $60 for each performance.

European films are usually bought on the open market by local distributors.

The majority of the American films that come to Cuba have advertising matter sent down with them with printing in English. Although the theater proprietors have steadily refused to pay for any advertising matter, yet when these posters have been given to them they have utilized them, and frequently have gone to the expense of having a Spanish translation of the titles hand painted on each poster.

As the custom in Cuba is to show pictures with Spanish and English titles, the large companies dispatch their films to Cuba with titles already provided in both languages. Foreign films have often had to be recut and titles inserted.

Films are shipped from the factories in air-tight tins, contained in a tin-lined wooden case, by ordinary freight, usually from New York. Small urgent news reels are sent by parcel post.

Film distributors are exempted from the 1 per cent gross sales tax in Cuba in so far as the films are rented and not sold. The distributors are subject to the 4 per cent tax on profits.

A favorite method of handling the Cuban business has been by means of a branch house. It is estimated by one company that a yearly turnover of $50,000 would warrant the placing of a competent manager in Cuba in charge of a branch.

Recently a movement was started for a censorship in Cuba and the Government made tentative plans to meet the demands. This movement has gradually ceased, and with the more complete dominance of the market by American films which have passed the censorship boards in the United States it has not been renewed.

American Motion Pictures in Denmark.

About 70 per cent of the motion pictures in the Danish market are of American origin, the remainder being chiefly German and Swedish. So far as the subjects are concerned, Danish tastes are much like those in the United States, so that as a rule the same stars that are popular in the United States are also popular in Denmark.

Most American pictures are sold for all three Scandinavian countries, the purchasers later redisposing of them in the individual countries. When buying the dealers usually purchase from 3 to 5 prints for the Scandinavian territory, according to quality and price, but 1 print is purchased if for Denmark only. In general films are bought on a royalty basis and prints by footage and meter. The prevailing average royalty price is about $2,000 for Scandinavia, and about 20 per cent of this for Denmark alone, the print costing about $0.05 per foot. In sending films to Scandinavia it is permissible to put advertising matter in the same package as the film.

In Denmark there are at present 2 motion-picture producing companies and 21 domestic and foreign distributing and exchange companies. These concerns operate throughout the entire country. Copenhagen is the center for distribution in Denmark; many Danish motion-picture dealers buy also for Sweden and Norway.

Denmark has 299 motion-picture theaters, 4 with a seating capacity of over 1,000, 2 seating from 600 to 1,000, 40 accommodating from 300 to 600, and 253 seating 300 persons or less. Programs in these theaters usually change once a week, but a good picture sometimes runs for several months, being shown first at one theater and then at another in different parts of the town. (Consul General Marion Letcher, Copenhagen, May 8.)

American Motion Pictures Predominate in France.

A recent edition of the French newspaper Bonsoir gives the following statistics of importations of motion-picture films into France during February, March, and April, 1923. Of 100,000 meters of cinematographic films shown in France during February, 1923, only 20,000 meters were French. Of 102,880 meters shown in March, 1923, only 14,350 meters were French. Of the 79,800 meters shown in April, 1923, only 11,600 meters were French. The other 68,200 meters were

nearly all American. The newspaper further points out the necessity of meeting this competition by better production and distribution methods.

The Motion-Picture Business in China.

The motion-picture business in China is under foreign control, with American pictures predominating. The Chinese are not interested to any great extent, although there have been two or three Chinese syndicates that are more or less successfully making pictures. These syndicates, or groups of Chinese actors, have had very little capital at their disposal. Their pictures have been failures from a foreign mechanical standpoint, but tremendous successes in China from an exhibitor's standpoint.

The Chinese prefer to see their own people acting out Chinese plots. They prefer such actors to the most distinguished foreign talent surrounded by all the marvelous technique of the business as it is known to-day in America. The surprising feature of the situation to-day is that the Chinese of the treaty ports continue to patronize the foreign picture to the extent that they do. This can be accounted for only by the fact that motion pictures here are still in the novelty class and many people attend for this reason only. The majority of the public has never been reached and never will be until films are put out that are adapted to the Chinese masses.

The substitution of Chinese characters for English in the foreign film is not satisfactory. The translator usually fails to grasp the exact meaning of the plot and if he does he is not able to convey this meaning in an intelligible manner to a Chinese audience, because Chinese audiences are so ignorant of life and conditions elsewhere in the world. They know Chinese life and want it depicted on the screen.

Number of Theaters—Admission Fees.

Exclusive of Peking and Manchuria, there are 30 theaters showing motion pictures in China to-day, as follows: Shanghai, 12; Tientsin, 6; Canton, 6; Hongkong, 5; and Hankow, 1. These theaters seat, on an average, 500 people. The largest is the Olympic Theater at Shanghai, which seats 900. The newest theater in use is the Carlton at Shanghai, which is rented to China Theatres (Ltd.) for $4,000 per month. A theater in Hankow, however, now under construction will open shortly.

The usual charge for admission to a theater catering to Chinese is 10 and 20 cents. If a Chinese attends a theater in a foreign neighborhood, he pays the same price as the foreigner—usually $1 or more. If a foreigner patronizes a theater in a Chinese district he only pays 10 or 20 cents. There is no racial discrimination. It is all a question of price. (Trade Commissioner Lansing W. Hoyt, Shanghai.)

Tariffs and trade regulations: China—Export duty on hair nets reimposed.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

KEEPING OUR DISTRIBUTORS ON THE ALERT.

No export manager, regardless of how well he is represented in foreign countries, can afford to overlook purchases by foreign Governments such as are announced in Commerce Reports and the Department's confidential circulars to American manufacturers. One of the most active and successful export managers of motor cycles, whose products are known in the most remote parts of the world, is getting the dollars-and-cents value out of such information. He has advised the Department that as soon as he learns of a foreign authority being in the market for automotive equipment, a cable is dispatched at once to his distributor, who may or may not prove to have been in touch with the situation. The exporter thus manifests a personal interest in his agent's success and, through an energetic follow-up, keeps him on the alert to secure any business that is within his reach.

ACCESSORIES POPULAR WITH MEXICAN CAR OWNERS.

Vice Consul Ernest E. Evans, Mexico City, April 30.

Automobile accessories, including bumpers, shock absorbers, radiator ornaments, spot lights, seat covers, electric horns, wire wheels, etc., to the amount of $450,000 or $500,000 per year are used in Mexico City. The market absorbs annually about two carloads of bumpers, 20 gross of spot lights, and a large quantity of radiator ornaments. A considerable demand for shock absorbers also is rapidly being created.

The market for accessories in Mexico is expanding in proportion to the increasing use of automobiles all over the country, but an additional reason for this rapid growth is the tendency of the Mexican car owner to indulge his desire for accessories. In Mexico City the demand is for the best quality and latest style. Although business there had increased considerably during the past two years, the recent reduction in import duty has already improved the sales.

United States Chief Source of Supply—Local Prices.

There is no local manufacturer of motor-car accessories and very little competition from Europe. It is estimated that 98 per cent of the requirements are supplied by the United States.

Prices as of May 1 on the accessories that now have a large sale in Mexico are given in the following table for comparison with prices prevailing in the United States:

Accessories.	Wholesale.	Retail.
Bumpers	$14.50 to $34.50	$25.00 to $50.00
Shock absorbers	22.50	27.50
Spotlights	4.75 to 9.50	9.00 to 15.00
Seat covers	12.15 to 30.00	17.50 to 47.50
Electric horns	4.00 to 9.50	6.25 to 15.00
Radiator ornaments	2.12 to 6.62	3.75 to 11.00
Wire wheels	50.00 to 150.00	62.50 to 225.00

Sales Methods—Credit Terms—Transportation and Packing.

Branch houses are not maintained in Mexico by either American or foreign manufacturers, accessories

being imported by local firms acting as agents for American exporters. Accessory houses in the United States occasionally send traveling salesmen to Mexico City to take orders, but most orders are placed directly with the manufacturers or jobbers. Texas jobbers handle 90 per cent of the local trade. Local distributors and importers usually receive 30 days' credit from American exporters and give their trade 30 to 60 days' credit.

Practically all accessories for this market arrive by rail, as freight costs overland are lower than by water routes. Handling charges at the border amount to about 1½ per cent. The present method of packing appears to be satisfactory, as no complaints have been made since American jobbers made an investigation of packing methods.

Aviation Progress in France.

Vice Consul Thomas B. Dawson, Paris.

French aviation during the past year was marked by many improvements in construction, especially metallic. Many advances have been made in motor design, Salmson having put out five new ones. Progress has been made in methods of cooling and carburation; the turbo-compressor Rateau has been nearly perfected; and the metallic propeller apparently solves the problem of propulsion.

New commercial planes have been turned out by Breguet de Potez and by Farman, and several are under construction by other firms. Fokker has put out a new 8-passenger monoplane with thick wings and 3-ply construction. It has a special smoking compartment. The Breguet Co. is making a number of their 14–A2 planes for the Spanish Government, most of them equipped with 300-horsepower Renault motors. Motorless planes, which did not exist in France at the beginning of 1922, by August numbered 36 at the Combergrasse trials.

Production and Registration of Airplanes.

French factories under peace conditions can turn out 6,000 planes per year. Of these 380 are for commercial use, 200 being exported. By October, 1922, 383 commercial airplanes had been registered in France as owned by companies or individuals. The relative growth in military and commercial aviation finds an interesting illustration in the percentage of these two types shown at the exhibitions since 1919. In that year military planes comprised 25 per cent of the exhibit and commercial planes 12 per cent; in 1921 the ratio was 35 per cent and 19 per cent, respectively; in 1923 the military made up 43 per cent and the commercial 13.4 per cent.

The Societe de Propagande Aeronautique proposes to make an educational campaign for the wider use of the commercial airplane in France, and later in other parts of Europe, as an everyday means of transportation that is as safe, comfortable, and convenient as the railroad or other means of travel.

International Automobile Show in Prague.

Acting Commercial Attaché H. Lawrence Groves, Prague, May 10.

The Fifteenth Annual International Automobile Show held in Prague during the first week in May brought to light an active demand on the part of the motoring public for light cars. Light models that attracted much interest were shown by the four Czecho-Slovak manufacturing concerns—Cesko Moravska Kolben Company, Prague, using the trade name "Praga"; Laurin & Klement Co., Mlada Boleslav; Walter & Company, Prague; and the Nesseldorfer Wagenbau Fabrik, A. G., Nesseldorf, using the trade name "Tatra." Only two American makes were exhibited. The leading European exhibits included the Citroen, with several light models, Fiat, Mercedes, Minerva, Graf & Stift, Austro-Daimler, and Bugatti. Considerable interest was attracted by the motor cycle section, where two American makes were shown. Among these exhibits was a scooter, manufactured locally by A. S. Ferrum under the name Near-A-Car.

Limited Sales for American Low-Priced Cars.

Bonafide inquiries for cars were numerous, according to exhibitors, and the two leading Czecho-Slovak manufacturers are planning considerable increase in their production of light models to meet the demand. The cheapest of these, the 4–12 horsepower produced by the Nesseldorfer Works, is quoted retail at 39,600 crowns for the regular four-seated touring car fully equipped—practically the same as a low-priced American car is now selling for in Czechoslovakia. Another American-made 25-horsepower model is retailing in Prague at 49,500 crowns. These prices include the 12 per cent luxury tax and 2 per cent turnover tax. The light-model Praga 5–18 horsepower car is quoted at 58,000 crowns, excluding luxury and turnover taxes, while the Laurin & Klement light-model 7–20 horsepower is listed at 73,000 crowns, excluding taxes.

Local dealers estimate that there are not more than 7,000 motor vehicles, passenger cars, and trucks in Czechoslovakia and that the country can absorb 20,000 cars. The present import tax, however, is a great handicap on the sale of foreign cars, especially the low-priced cars which are not directly competitive with domestic cars. But even under present conditions a limited number of low-priced cars can be sold, and the market therefore justifies the serious consideration of American producers of this class of automobiles.

[The official catalogue of the Prague show, with descriptive folders of the Praga, Laurin & Klement, Tatra, and Near-A-Car and three photographs of exhibits may be secured from the Automotive Division or through the proper district or cooperative office on application for Exhibit No. 9531.]

Marine Motors Needed in Lisbon.

Consul General W. Stanley Hollis, Lisbon, May 7.

There has been a certain increase in the demand for motor boats and marine motors in the Lisbon consular district. The main obstacle to the development of the market is the great depreciation of the Portuguese currency, which makes the purchase of dollar exchange difficult; but a good demand is expected as soon as more normal exchange conditions are established.

There are hundreds of small sailing boats in the Lisbon harbor, maintaining connections between the various localities on the River Tagus, which would preferably be converted into motor boats if the prices were not so high.

Additional information regarding automotive products appears in this issue under the following sections: Cable review, Far East: Japanese automobile market active.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

MARKET FOR POORER GRADES OF LUMBER.

That it pays to investigate needs of foreign markets is shown by the following incident, which occurred in a foreign country a short time ago. An American exporter sent an unusually poor consignment of oak, which was found to be wormy, to his oversea connection, but no market could be found for this shipment. The consignment would have caused a great loss to the exporter were it not for the fact that the consignee happened to visit an antique furniture factory. The manufacturer was at that time busily engaged in making "antique" grandfathers' clocks and found that the oak in question would answer his purpose very nicely because it eliminated the work of boring wormholes by hand. The shipment was disposed of at a premium, and a profitable connection was established. While this proves that there is a market abroad for even poor grades of lumber, one must know the foreign market requirements before shipping such stock, and it is naturally not advisable to make consignments on the chance of finding a market.

INTERNATIONAL LUMBER TRADE.

The principal competition encountered by the United States in the international lumber market is shown by the following table. In addition to the countries listed, there is important competition from certain countries for which figures are not available, such as the central European countries and Brazil.

International lumber trade in 1922.

Items.	Pine.	Spruce.	Pine and spruce.	Douglas fir.	Hardwoods.
	M feet.	*M feet.*	*M feet.*	*M feet.*	*M feet.*
United States imports	263,746	515,328	.....	75,437	70,886
United States exports	521,145	35,178	.....	625,075	245,645
Sweden's exports	.....	.....	2,034,268	.....	.....
Finland's exports	.....	.....	1,670,997	.....	.....
Norway's exports	.....	.....	160,854	.....	.....
Canada's exports [1]	301,846	595,592	.....	201,317	(2)

[1] Fiscal year ended March 31.
[2] Not available.

NOTE.—Softwood imports into the United States are from Canada for the year ended March 31, the figures being from the annual report of Canadian Department of Trade and Commerce, since United States import statistics did not separate softwoods and hardwoods before September 22, 1922. Other minor softwood imports are not available. American imports of hardwoods shown include mahogany and Spanish cedar logs, and there were also $531,554 worth of "other hardwoods." The figure does not include free hardwoods before September 22. The export figures for Sweden, Finland, Norway, and Canada are taken from official reports of those countries.

French Chestnut Forests.

Commercial Attaché Chester Lloyd Jones, Paris, May 11.

The rapid cutting of chestnut forests in France threatens to make this tree and its products lose their commercial importance. Figures covering the number of feet of chestnut lumber cut per year are not available, but the changes may be judged from the decline in the nut crop. A generation ago, when the industrial uses—especially in tanning—were less important, the chestnut forests yielded a nut crop five times the average of 1919–20. Since then the amounts have steadily declined.

The effect of the deforestation which has been going on in some regions has been far-reaching. Scientific thinning is, of course, to be encouraged, but wholesale cuttings have had results of disastrous character in districts where the nut crop was formerly an important economic resource. The trees of some regions have suffered also from the so-called "ink disease." The disappearance of the chestnut forests partly explains the destructive inundations which occur in the central plateau and the exodus of the rural population from these regions. Laws are already in force to restrict the cutting of trees in mountainous regions, but these do not adequately protect the chestnut. There is also legislation in force intended to assure replantings by cooperation between landowners and manufacturers of tannin, but these measures have not proven sufficient.

Because of the damages which will result from further unwise cuttings, new legislation is now demanded which will force the property owner, except where the land is to be cultivated or the trees are affected by disease, to secure permission from the public authorities before cutting more than 20 chestnut trees per year. Such legislation, it is argued, is needed to restrain floods, to prevent washouts, and to protect the electric-power production of the rivers.

Rumanian Lumber Exports Continue 1922 Increase.

Acting Commercial Attaché Louis E. Van Norman, Bucharest, May 4.

In 1922 Rumania exported 523,000,000 board feet of lumber and timber—nearly five times the 1921 export. The following figures for the first three months of 1922 and 1923 indicate that Rumania is increasing the trade it gained last year. The principal markets for Rumanian lumber were shown in the May 28 issue of COMMERCE REPORTS.

Rumanian lumber and timber exports.

Classes.	January-March, 1922.	January-March, 1923.
	Board feet.	*Board feet.*
Rough softwood lumber	31,040,000	126,279,000
Other softwood lumber or timbers	6,860,000	8,567,000
Construction lumber and timber of hardwoods:		
Oak	148,000	.....
Other hardwoods	333,000	688,000
Softwood logs	495,000	1,388,000
Total	38,876,000	136,922,000

NOTE.—Rumanian softwoods are pine, spruce, larch, and fir.

Additional information regarding lumber appears in this issue under the following sections:

Cable review, eastern Europe:
- Lumber exports from Rumania.
- Finnish lumber sales.
- Polish exports of timber resumed.

Cable review, Far East:
- Lumber stocks in Japanese warehouses.
- Chinese lumber stocks and prices.

Agricultural implements: Tractors used for hauling mahogany in British Honduras.

Tariffs and trade regulations:
- France—Export restriction on walnut reestablished.
- Poland—Exportation of crude lumber resumed.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

DON'T NEGLECT OUT-OF-THE-WAY PLACES.

The comfort of modern electrical appliances in out-of-the-way places was commented on recently by a man stationed in the South Sea Islands. In such places, where climatic conditions are trying and where social and recreative facilities are limited, people are accustomed to buying all possible artificial aids to comfort. Large plantation owners, for instance, in remote districts are often prospects for many electrical appliances.

ELECTRIC APPARATUS AND EQUIPMENT IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam, May 10.

The manufacturers of electrical machinery and equipment of all varieties in the Netherlands have occasion to be satisfied with business done during the first quarter of the year, so far as trade returns indicate. There was a marked decrease in the imports of most lines of both machinery and equipment, while, on the other hand, the exports show a gratifying increase. The exports, including electric-light bulbs, during the quarter of 1923 exceeded the imports by about $1,000,000 in value, while they showed an increase of more than one-fourth over the corresponding period of last year. Imports during the first quarter of this year decreased by about 12 per cent compared with the same period of 1922.

Export Trade Increased.

With the exception of telegraph and telephone apparatus, all items in the export list show an increase in value, and all of them, except telegraph and telephone apparatus and electric wires and cables, also show an increase in volume. The most notable feature of the export trade is the manner in which the Dutch manufacturers are widening their markets and including new fields in their sales campaigns. Germany has bought less than heretofore in practically all lines. In the items of generators, motors, dynamos, and the like, Belgium and the Dutch East Indies have increased their purchases materially, and the same is true of miscellaneous instruments and apparatus. Most of the former customers in cables have bought less, but the sales have been increased in South America. Sales of electric-light bulbs have increased by almost a third, and while France, Great Britain, Belgium, Spain, and several other European countries have increased their purchases, the chief increases have occurred in Argentina, Brazil, and other South American countries, and in Canada, Australia, South Africa, and other British colonies. It is somewhat significant that material sales have been effected in the Philippine Islands. The exports have been as follows:

Exports of electrical apparatus and equipment from the Netherlands.

Items.	1922		1923	
	Metric tons.	Value.	Metric tons.	Value.
Generators, dynamos, motors, transformers, and parts	239	$143,616	415	$208,260
Wireless apparatus	9	20,944	13	27,300
Telegraph and telephone apparatus	104	51,238	35	19,890
Electrical apparatus and instruments and parts	151	90,882	250	112,710
Electric cables and wire, insulated or otherwise	450	204,578	444	208,650
Electric lamps and bulbs	761	2,038,674	1,165	2,624,000
Total	1,714	2,549,932	2,322	3,200,810

Decrease in Imports.

All items in the import list show decreases with the exception of lead insulated wire and cables and wireless installations. In the former there has been an increase in imports from Great Britain, Germany, and various other countries, but a loss of trade on the part of Sweden. Germany has continued to dominate the trade in all lines, including wireless installations, the United States being credited with a small trade in the latter item during the current year. The import trade in generators, motors, dynamos, and transformers fell off greatly, the loss being heaviest in German returns, but including also all the principal supplying countries, among which is the United States. Germany lost over half its trade in telegraph and telephone supplies, some of it being taken by Belgium and Sweden. It also lost trade in wire and cables, which was taken by other countries; but the German manufacturers succeeded in increasing their sales of electric-light bulbs slightly, although this item is not very important in the import trade. At one time last year the German competition in the lamp trade became very serious and threatened the Dutch industry, but that danger seems to have passed. The imports in detail during the first quarter of 1923, compared with the same period of 1922, have been as follows:

Imports of electrical machinery and equipment into the Netherlands.

Items.	1922		1923	
	Metric tons.	Value.	Metric tons.	Value.
Generators, dynamos, motors, transformers, and parts	1,333	$658,988	977	$433,680
Wireless apparatus	36	56,100	40	59,280
Telegraph and telephone apparatus	547	616,630	582	593,190
Electric apparatus and parts	1,244	471,240	875	448,500
Lead insulated wire and cables	3,233	527,714	3,318	546,390
Other copper wire and cables	269	130,900	251	124,020
Electric lamps	128	178,772	58	82,680
Total	6,790	2,640,344	6,101	2,287,740

Conditions in the German Electrical Industry.

Consul Orsen N. Nielsen, Berlin, May 2.

Of 78 factories manufacturing electrotechnical wares and employing 199,000 workmen, 14 per cent were doing considerably less than the normal amount of business, according to reports made to the Reichsarbeitsministerium (Ministry of Labor) early in April. In 76 per cent of the factories business was average, and in 10 per cent it was reported to be good. The figures for February were 7 per cent, 79 per cent, and 14 per cent, respectively.

The decrease in orders experienced by the industry in March appears to have been due to uncertainty concerning future price developments. Dealers were re-

luctant to place any considerable amount of business with the manufacturers and covered only their immediate needs. Because of high local production costs, very little foreign business was attracted in March.

In the greater part of the industry the 48-hour week is maintained, although manufacturers of X-ray outfits and other apparatus used by hospitals and physicians have reduced the working week to 42 hours. Certain factories devoted to the manufacture of household electrical appliances also have been forced to operate on a 40 to 42 hour week.

March orders in the following lines showed decreases: Motors, dynamos, switchboards, cables, incandescent lamps, and telephone and telegraph apparatus.

Additional information regarding electrical equipment appears in this issue under the following sections:

Construction news: Hydroelectric stations proposed in Latvia.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

THE MARKET FOR DRUGS AND CHEMICALS IN SWEDEN.

Consul Walter H. Sholes, Goteborg.

The Swedish drug and chemical market is showing an improved tone and dealers are beginning to look into the future with increased confidence. The Swedish production of chemicals is considerable but by no means commensurate with the consumption. Although the Germans are still obtaining the largest share of the business, it is said that Germany is gradually losing its dominance of the trade market. American exporters of drugs and chemicals should find a favorable market in Sweden.

The Swedish druggists are well organized, and, unlike American druggists, have a semiofficial position. The national laws are most favorable to them. For example, with few exceptions, drugs and pharmaceutical products may be imported and sold only by licensed pharmaceutical chemists. There are about 30 importers and 13 pharmacies in Goteborg—a city of 230,000 inhabitants. This small number is explained by the fact that a Government license, which is difficult to procure, is required to open a pharmacy in Sweden. Swedish pharmacy prices are regulated by the Government, and, according to one prominent importer of drugs and chemicals, are usually from 100 to 500 per cent above cost.

In western Sweden drugs and medicines are seldom bought in larger quantities than actually needed. Consequently, the retail trade in such goods has not materially decreased, but so-called technical and industrial chemicals are in less demand than formerly.

Sweden a Market for Crude Drugs.

A country situated so far north as Sweden must necessarily look beyond its own borders for most of its crude drugs. Thus, tropical and subtropical drugs are imported either direct or, as is often the case, from continental sources. Certain plants with medicinal properties grow sparsely in Sweden owing to climatic conditions. Although it has been recommended that such plants be gathered and prepared instead of importing similar drugs at considerable expense from abroad, comparatively small quantities are actually collected. [A list of these crude drugs may be procured from the Chemical Division upon request.]

It is considered that western Sweden offers a market for the following crude drugs from the United States: Lobelia, hanamelis leaves, senega root, sassafras root, cascara sagrada bark, Gossypium, and hydrastis root. However, except for lobelia, hanamelis leaves, Gossypium, and hydrastis, the demand is small. Menthol is used for various purposes and is usually imported from Germany, France, England, and the Netherlands. Methylsalicylate, as well as a number of other similar preparations, are received chiefly from Germany.

Demand for American Chemicals.

The Swedish production of chemicals is considerable, although complete data and statistics are not available. A list of some of the Swedish products in the order of their importance according to value includes linseed oil, chlorates and perchlorates, glue and gelatin, acetic acid, medicinal preparations, chloride of lime, sulphate of ammonia, varnish (copal, asphalt, etc.), perfumery, alum, spirit varnishes, soda crystals, ether, tar and tar oils, colors and paint pigments, caustic potash, formaldehyde (formalin), caustic soda, nitric acid, benzol products, sulphate of soda, leather oils, oil varnishes, oil (creosote and pitch), bisulphate of soda, silicate of soda, rosin, nitrate of ammonia, phosphorus, blue vitriol, copperas, caustic ammonia, creosote oil, nitrotoluol, and other products.

Many of these articles, however, either are not produced in Sweden in sufficient quantities to supply the demand or can be procured cheaper from abroad. Consequently there are considerable chemical imports, principally effected through the port of Goteborg. In 1920 and 1921 Sweden looked to the United States for part of its requirements. The participation of the United States in the Swedish trade is shown by the following table, which gives statistics for certain chemicals imported into Sweden in 1920 and 1921:

Imports of certain chemicals into Sweden in 1920 and 1921.

Articles and countries of origin.	1920	1921
	Kilos.	*Kilos.*

Other Chemical Imports.

In addition to the articles listed in the preceding table, Sweden also imports beeswax, bitter almond oil, ceresin, carbolic acid, cresol and creosote oil, gall nuts, artificial indigo, licorice, menthol, etc., muriatic acid, naphthalene, sodium sulphate, tannic acid, vegetable wax, valonia, and other articles.

In recent years Germany has been the leading source of supply for fine chemicals. Heavy chemicals in turn are obtained from the United States and the United Kingdom. The most important source is the United Kingdom, although it is possible that this country serves as a clearing house for American products of this type.

During the war the manufacture of phosphorus was commenced in various parts of Sweden, but so far has not reached any large proportions, the production in 1920 amounting to 20,659 kilos, or about one-fifth of the importation.

Sweden produced 5,471,016 kilos of chlorates and perchlorates in 1920 and imported only 297,974 kilos. The production of caustic soda amounted to 1,085,190 kilos, 213,729 kilos less than the imports for the same year.

Although in 1920 Sweden produced 2,743,300 kilos of sodium sulphate, or Glauber's salt, this amount by no means met the demand, as in that year there were imported 51,126,896 kilos, of which 42,097,024 kilos came from England, and 827,981 from the United States. The 10 glass factories in this section may be considered a potential market for this product. The decrease of 1921 imports of sodium sulphate to 14,078,779 kilos may be due partly to the depression in the glass industry.

The Swedish pulp and paper industry requires considerable quantities of soda, sulphur, bleaching powder, and rosin, while the match industry, which is distinctly a western Swedish industry, uses red phosphorus, chlorate of potash, paraffin, glue, etc. The imports of sulphur into Sweden in 1920 and 1921 were 58,554 and 21,038 metric tons, respectively, practically all being shipped from the United States.

Trade in Linseed Oil.

The production of linseed oil in 1920 totaled 8,971,690 kilos. Importations of raw linseed oil amounted to 321,061 kilos in 1920 and 565,298 kilos in 1921, distributed, as to countries of origin, as follows: Denmark, 73,722 kilos in 1921, compared with 177,058 in 1920; United Kingdom, 450,086 kilos in 1921 and 72,675 in 1920; and the Netherlands, 36,105 kilos in 1921 and 67,717 in 1920. Figures for the United States are not available. Boiled linseed oil importations amounted to 24,670 kilos in 1921, compared with 199,464 in 1920. The United Kingdom supplied 4,362 kilos in 1921 and 68,872 kilos in 1920. Denmark sent 59,373 kilos in 1920, the figure for 1921 not being given. The Netherlands furnished 15,602 kilos in 1921, compared with 54,287 kilos in 1920. Imports of boiled linseed oil from the United States, according to statistics for 1920, totaled 15,768 kilos.

Naval Stores Produced and Imported.

In 1920 Sweden produced 791,578 kilos of crude turpentine and 1,361,756 kilos of refined turpentine, 654,556 kilos of the refined having been obtained as a product from the pulp mills. The local product has a strong smell and is not considered of the best quality, workmen dreading it because it produces exanthema. French turpentine is considered the best, but is usually twice as expensive as the Swedish product. American and Austrian turpentine are considered of good quality. In 1920, 366,638 kilos and in 1921, 429,836 kilos of turpentine were imported. Of these amounts 231,795 kilos in 1920 and 308,117 in 1921 came from France; 37,365 kilos in 1920 and 6,378 in 1921 from the United Kingdom; and 21,064 kilos in 1920 and 7,201 in 1921 from the United States.

The production of rosin oil amounted to 35,079 kilos in 1920. The imports equaled 85,771 kilos in 1920 and rose to 92,874 kilos in 1921. Of the imports in these two years, 57,219 kilos were brought from the United States in 1920 and 78,487 in 1921, while the United Kingdom furnished 18,536 kilos in 1920 and 6,920 kilos in 1921.

When compared with the previous year the production of rosin in 1920 was very small—41,135 kilos, compared with 653,033 in 1919. In addition, 521,968 kilos of rosin glue were manufactured in 1920, of which 80,748 kilos were obtained as a by-product in the sulphate-pulp mills of western Sweden. At the Swedish pulp mills, in addition thereto, there were produced 2,576,274 kilos of liquid rosin (polyterpenes). The local product, which is of a dark color, is inadequate. The imports of rosin or colophony dropped from 5,759,823 kilos in 1920 to 2,308,262 kilos in 1921, 4,518,461 kilos in 1920 and 1,718,068 kilos in 1921 having been received from the United States.

Besides turpentine, rosin, and rosin oil, the articles listed in the following table were produced in different localities by dry distillation:

Swedish production and imports of wood and coal distillation products.

Articles.	Production in 1920.	Imports.	
		1920	1921
CHIEFLY OF WOOD.	*Kilos.*	*Kilos.*	*Kilos.*
Tar and tar oil	7,623,051	517,722	79,488
Pitch and pitch oil	578,998		
Wood oil	42,791		
Wood spirits (calculated 100 per cent methyl alcohol basis)	691,118	12,472	14,576
Formaldehyde (formalin)	254,007	5,137	35,275

Naphthalene		74,335	123,705
Carbolineum		32,819	14,383
Benzol oil		68,026	14,146
Other coal-tar products	902,466		

[1] Included under tar oil.

From the foregoing table it appears that there is considerable production of wood and coal distillation products in Sweden, particularly of distillates of wood. The trade outlook continues unsatisfactory, large stocks being on hand throughout the country. Much also depends on conditions in Germany and neighboring countries. It is reported that the Germans have lost considerable ground in their ability to compete in certain lines. This applies to their dependencies upon foreign countries for certain raw materials. They have mostly ceased to quote prices in marks, and usually quote in Swedish crowns, American dollars, or British pounds sterling.

Some of the articles mentioned (for instance, sulphur, bleaching powder, soda, paraffin, and phosphorus) are to a great extent used in the export industries of western Sweden, and consequently the demand for such products is dependent upon the exportation of Swedish pulp, paper, matches, and the like.

American Chemicals in the Swedish Market.

The important thing for American exporters of drugs and chemicals to consider is the prestige of American goods in this market. American chemicals undoubtedly have improved in late years. The foreign buyer, however, remains more or less prejudiced. This condition can and is being overcome, and Sweden may be considered as a very favorable market for American chemical products.

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Far East: Stocks of chemicals and dyes in Japanese warehouses.
Latin America: Chilean nitrate production.
Tariffs and trade regulations:
Egypt—Import duty on denatured alcohol reduced.
Germany—Control of match supplies abolished.
Philippines—Registration of fertilizers required.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

U. S. IMPORTS OF IRON AND STEEL.

Imports of iron and steel into the United States during April amounted to only 77,909 long tons, as compared with 106,206 tons in March, 67,707 tons in February, and 120,080 tons in January. Pig-iron receipts in April were 50 per cent lower than in March and 57 per cent below those for January, although they were slightly in excess of February deliveries. Scrap iron, bar iron, rails and splice bars, and tin plate show considerable increase from the March figures. The receipts of foreign iron and steel products by the United States in March and April, 1923, are shown in the following table:

United States imports of iron and steel.

Origin of United States Iron and Steel Imports.

The leading sources of American imports of foreign iron and steel in April, compared with March, were respectively: United Kingdom, 32,637 tons and 44,213 tons; Canada, 20,231 tons and 27,661 tons; Cuba, 9,545 tons and 4,496 tons; France, 7,145 tons and 16,784 tons in March; Germany, 3,591 tons and 7,205 tons; Belgium, 1,906 tons and 4,734 tons; British India, 1,000 tons in April and no shipments in March; Sweden, 698 tons and 656 tons; and Panama, 622 tons and 1 ton.

Shipments received from the United Kingdom in April were composed of the following: Pig iron, 21,474 tons; ferromanganese and manganese alloys, 6,049 tons; scrap iron, 176 tons; steel ingots, blooms, billets, etc., 459; bar iron, 412; structural shapes, 157; boiler and other plate iron and steel, 5; sheets and saw plates, 56; tin plate, 3,185; round iron and steel wire, 229; wire rope and insulated and covered wire, 12; flat wire and strip steel, 27; wire rods, 29; tubular products, 299; nails and screws, 2; and castings and forgings, 66 tons. This represents a considerable decline from the March receipts which were composed mainly of 34,828 tons of pig iron, 8,053 tons of ferromanganese and manganese alloys, 421 tons of tin plate, and 358 tons of round iron and steel wire.

Among the Canadian iron and steel products that entered the United States in April were 1,539 tons of pig iron, 16,159 tons of scrap, and 799 tons of rails and splice bars. The important March items were 10,455 tons of pig iron, 909 tons of ferrosilicon, and

15,511 tons of scrap. Pig iron (4,100 tons) and scrap (5,445 tons) made up the entire Cuban consignment for April, only scrap iron and steel having been received from Cuba in March.

The bulk of the French iron was of pig—6,789 tons in April and 16,566 tons in March. Other large shipments in April were: From Germany, 1,369 tons of pig iron, 303 tons of scrap, and 1,558 tons of rails and splice bars; from Belgium, 466 tons of bar iron, 782 tons of structural shapes, and 496 tons of rails and splice bars; from British India, 1,000 tons of pig iron; and from Panama, 622 tons of scrap.

In addition to the tonnages previously mentioned, there were imported 171,459 tons of iron ore, 14,071 tons of manganese ore and concentrates, and 44,978 square feet of card clothing in April, compared with 166,626 tons of iron ore, 12,799 tons of manganese ore and concentrates, and 33,096 square feet of card clothing in March. The sources of the April receipts were: Iron ore, 63,669 tons from Sweden, 38,800 tons from Cuba, 26,950 tons from Chile, 22,814 tons from Algeria and Tunis, 19,000 tons from Ecuador, 224 tons from Canada, 1 ton from Italy, and 1 ton from Kwantung Leased Territory; manganese ore and concentrates 10,892 tons from Brazil, 3,170 tons from Turkey in Europe, 6 tons from Germany, and 3 tons from England; card clothing, 41,676 square feet from England, 232 square feet from Ireland, 1,787 square feet from Belgium, and 1,283 square feet from Germany. The countries of origin for the March shipments were: Iron ore 52,000 tons from Cuba, 41,535 tons from Sweden, 39,100 tons from Chile, 21,471 tons from Spain, 11,300 tons from Algeria and Tunis, 1,189 tons from Germany, and 31 tons from Canada; manganese ore and concentrates, 6,036 tons from British West Africa, 4,227 tons from Brazil, 2,505 tons from Russia in Europe, 21 tons from Germany, and 10 tons from the Netherlands; card clothing, 26,759 square feet from England, 5,139 square feet from Germany, 610 square feet from France, and 588 square feet from Switzerland.

South African Portland-Cement Manufacturing Industry.

Consul Charles J. Pisar, Cape Town, April 13.

The four factories in the Union of South Africa that produce Portland cement have a capacity of 4,250,000 bags of 188 pounds each, or 2,125,000 casks of cement a year. During the past year, however, the plants have been operating on half time owing to the slackness in the demand.

In 1921, 181,483 casks, and in 1922, 248,376 casks, of cement were imported into South Africa, chiefly from Great Britain, Belgium, Norway, and Denmark.

The duty on cement imported into South Africa is 1s. 3d. per cask, with a rebate of 3d. per cask on British cement. During the past year further protection was granted to the domestic industry by the imposition of a special dumping duty on cement imported from Great Britain, Denmark, Norway, and Belgium.

The South African Mining and Engineering Journal of March 31, 1923, points out that the local industry is suffering from foreign competition by reason of the very low ocean freight rates levied on the European cement. The railway rates on cement to-day are 29s. 10d. per ton from the Transvaal factories to any coast port. On the other hand, the ocean freight charge is 12s. 6d. per long ton from any European port to Cape Town, and it is pointed out that the lowest pre-war rate was 15s. The railage from the cement factory at Piquetberg, Cape Province, to Cape Town (a distance of 104 miles), is 13s. 5d. per ton, or almost 1s. per ton more than the rate from Southampton to Cape Town.

The prices of South African cement have been reduced appreciably during the past 12 months, and on a f. o. b. works basis, compare favorably with prevailing rates overseas.

FOREIGN MARKETS FOR UNITED STATES IRON AND STEEL.

The increase in the American foreign steel trade during April is noticeable in each of the four major countries to which these goods were shipped. Exports of iron and steel products from the United States to Canada gained 3,341 long tons in volume over those for March, to Japan 7,374 tons, to Cuba 2,724 tons, and to Mexico, 1,988 tons. On the other hand, shipments to Spain, the United Kingdom, and Chile dropped off considerably. A list of the countries to which were destined over 500 tons of American iron and steel that left ports in the United States during April, together with the amount consigned to each, is shown in the following table:

United States exports of iron and steel to principal foreign countries.

Countries of destination.	Tons.	Countries of destination.	Tons.
Canada	75,017	Hongkong	1,630
Japan	29,215	Belgium	1,614
Cuba	14,015	Panama	1,519
Mexico	7,870	British West Indies	1,345
United Kingdom	5,090	British South Africa	1,339
China	4,561	Chosen	1,241
Argentina	3,997	Italy	1,191
Australia	3,527	Dutch East Indies	842
Peru	2,919	Venezuela	827
Brazil	2,771	Dominican Republic	685
Philippine Islands	2,633	France	651
Colombia	2,047	Bolivia	643
Chile	1,943	Uruguay	556
Honduras	1,820	Guatemala	551
Kwangtung Leased Territory	1,638		

Other outstanding shipments of specified commodities were: Steel bars, 1,399 tons to the United Kingdom and 1,427 tons to China; skelp iron or steel, 982 tons to Scotland; galvanized sheets, 906 tons to Mexico, 842 tons to Colombia, 672 tons to China, and 634 tons to the Dutch East Indies; tin plate, 1,172 tons to Italy, 645 tons to Argentina, 958 tons to China, and 776 tons to Hongkong; fabricated structural shapes, 676 tons to Argentina; rails, 122 tons of heavy rails and 704 tons of light rails to Honduras, 764 tons of light rails to Panama, 943 tons of heavy rails to Chosen, 1,445 tons of heavy rails to Kwantung Leased Territory, and 924 tons of heavy rails to the Philippine Islands; casing and oil-line pipe, 1,632 tons to Mexico, 493 tons to the British West Indies, 537 tons to Argentina, 492 tons to Bolivia, and 1,622 tons to Peru; welded black pipe, 829 tons to England and 742 tons to Mexico; galvanized wire, 575 tons to Argentina; barbed wire, 742 tons to Argentina, 774 tons to Brazil, 863 tons to Australia, and 652 tons to British South Africa; cut nails, 492 tons to Chile; wire nails, 726 tons to China; and spiegeleisen, 1,503 tons to Belgium.

Exports to Canada in April were comprised primarily of the following, in tons: Pig iron, not con-

taining alloys, 1,482; scrap, 2,596; ingots, blooms, billets, and slabs, 593; steel bars, 8,144; wire rods, 2,042; plates, other than boiler plate, not fabricated, 13,167; skelp iron or steel, 9,487; galvanized sheets, 4,536; black steel sheets, 5,988; black iron sheets, 768; strip steel, 1,442; hoops, bands, and scroll, 2,121; tin plate, 3,726; structural shapes, not fabricated, 8,091; structural shapes fabricated, 986; other structural forms, 821; heavy rails, 2,145; light rails, 156; rail accessories, 468; boiler tubes, 807; plain wire, 541; galvanized wire, 1,002 barbed wire, 877; and iron castings, 578.

Consignments for Japan included 1,904 tons of scrap, 564 tons of iron and steel bars, 1,547 tons of wire rods, 500 tons of galvanized sheets, 3,819 tons of black steel sheets, 4,047 tons of tin plate, 452 tons of structural shapes, not fabricatel, 1,698 tons of fabricated structural shapes, 647 tons of other structural forms, 6,067 tons of heavy rails, 51 tons of light rails, 491 tons of rail accessories, 2,276 tons of welded black pipe, 3,320 tons of galvanized wire, and 897 tons of wire nails.

Cuban purchases embraced a great variety of products, but chief among them were 2,057 tons of steel bars, 1,199 tons of galvanized sheets, 745 tons of tin plate, 426 tons of structural shapes, not fabricated, 950 tons of fabricated structural shapes, 999 tons of other structural forms, 2,483 tons of heavy rails, 188 tons of light rails, 618 tons of rail accessories, 504 tons of nails and tacks, 432 tons of welded black pipe, 394 tons of welded galvanized pipe, 729 tons of cast iron pipe and fittings, and 617 tons of barbed wire.

Large Copper Shipments from Chile.

Vice Consul Ben C. Matthews, Antofagasta, May 3.

Shipments of copper bars from the Antofagasta district of Chile in 1922 totaled 73,532 metric tons. This amount is considered the largest in the history of the industry. Stocks carried over from 1921 were materially reduced, the bulk of the shipments going to the United States, although large quantities also went to Germany and other European countries. Exports of copper ores amounted to 33,363 metric tons in 1922, as compared with 30,031 tons in 1921. This ore was exported principally to the west coast of the United States for smelting.

The largest producer of refined copper (an American company) worked regularly during 1922 and has recently increased production to full capacity, but the small smelters remained idle during the past year. The price of copper remained fairly steady throughout the year, commanding about 13 cents a pound.

Mineral Production and Trade of Spain.

Cable from Commercial Attaché Charles H. Cunningham, Madrid, June 18.

The production and sale of mercury from the Almaden Mines, which are under Government control, continue to show an increase over 1922 and sales are greatly in excess of production. Through May the output was 21,800 flasks, while sales reached about 35,000 flasks, netting approximately 9,000,000 pesetas. Only 20,619 flasks were sold during the whole year 1922. Stocks on hand are now 17,300 flasks.

Exports of iron from Bilbao are much higher than last year. In April they amounted to 179,000 tons, against 100,000 tons during April, 1921, and in May to 111,000 tons, against 20,000 tons during May, 1922. Prices, f. o. b. Bilbao, average 18.50 to 23 pesetas per ton, according to grade.

Continued Improvement in British Foreign Steel Trade.

Cable from Commercial Attaché Walter S. Tower, London, June 14.

The trend of British exports of iron and steel has been continually upward since the beginning of 1923, the volume of British iron and steel shipped abroad during May, 1923, reaching 424,509 long tons. This is the largest amount of iron and steel products that has been exported from the United Kingdom during any one month since the World War. The totals for the earlier months of 1923 were: January, 353,389 tons; February, 317,568 tons; March, 368,072 tons; and April, 386,957 tons. Imports of these commodities decreased from 115,384 tons in April to 82,245 tons in May. The following table gives a comparison of the chief iron and steel products shipped to and from Great Britain during the months of April and May:

British iron and steel imports and exports in April and May, 1923.

Articles.	Imports.		Exports.

Iron and steel castings in the rough	420	468	286	253
Iron and steel forgings in the rough	67	127	18	200

Pig-iron production in May was the largest since September, 1920, when 741,000 tons were manufactured. The output for May, 1923, amounted to 714,200 tons. Production of steel ingots and castings in May totaled 821,000 tons, also the largest monthly figure since September, 1920, when 884,700 tons of steel ingots and castings were turned out by British works. At the end of May there were 223 blast and 352 open-hearth furnaces in operation.

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, western Europe: Renewed activity in Belgian metallurgical industries.
Cable review, Far East:
Abolition of Australian tariff on unworked steel plates.
Chinese steel market dull.
Iron and steel stocks in Japanese warehouses.
Finance: German investments in the Upper Silesian iron industry.
Latin America:
Mining area of Brazil.
Mine and smelter operations in Mexico.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

New Australian Wool Season Opens September 17, 1923.

An eight-month wool-selling season will open at Sydney, Australia, on September 17, 1923. A total of 1,600,000 bales of wool will be offered during the season, half before and half after Christmas. (Cable from Trade Commissioner J. W. Sanger, Melbourne, June 18.)

Latvian Flax Sales Reported.

There were 180,000 poods of flax (1 pood=36.07 pounds) exported from Riga during the first week of May. The bulk of this went to England. A lively demand for Latvian flax is reported from Czechoslovakia and several important transactions have been concluded. (Trade Commissioner C. J. Mayer, Riga, May 7.)

Chinese Cotton Yarns Predominating in Amoy Market.

Chinese yarns are supplanting Indian and Japanese cotton yarns in the Amoy, China, market. Of the 2,215 tons imported in 1922, Chinese mills furnished 2,089 tons; Indian, 49 tons; and Japanese, 77 tons. Total imports of cotton yarns in 1913 amounted to 3,328 tons. (Consul A. E. Carleton, Amoy, April 17.)

Nicaragua a Small Market for Jute Bags.

Approximately 300,000 jute and coffee bags are imported annually into Nicaragua, mostly from the United Kingdom. Specifications as to size of bags in demand and names of importers may be obtained from the Textile Division, Bureau of Foreign and Domestic Commerce. (Consul Harold Playter, Corinto, May 23.)

Turkish Mohair Market Weakens.

The Turkish mohair market weakened during March, owing to lack of demand from abroad. Prices for finer qualities averaged 36¼ cents per pound; fair to average, 34 cents; low grade, 29½ cents. Available stocks at the end of the month were estimated at 4,000 bales, or 200 bales more than March exports. (Consul General G. Bie Ravndal, Constantinople, April 20.)

Yucatan Henequen Prices Advance.

The price paid to Yucatan henequen planters was increased on May 21 from 4 to 4½ cents per pound at Progreso. This increase amounts to about $2 a bale and will result in an increase of approximately $80,000 a month to Yucatan exporters, as monthly shipments are averaging 40,000 bales. (Consul O. Gaylord Marsh, Progreso, May 26.)

Japanese Cotton Grey Cloth Prices.

For the week ended May 26 the average price of eight standard cotton grey cloths (three sheetings, three shirtings, one T cloth, and one drill) on the Osaka market was 43.9 cents per pound. For comparative purposes, the average quotations on the following specified dates are given: May 25, 1922, 43.92 cents; January 27, 1923, 46.47 cents; February 24, 1923, 45.71 cents; March 31, 1923, 45.58 cents; and April 28, 1923, 45.13 cents. (Based on cable from Commercial Attaché James F. Abbott, Tokyo, June 8.)

China Reports Increased Cotton Acreage.

A 10 per cent increase over 1922 in the area planted to cotton is reported by the Hankow consular district. The condition of the 1923 crop is medium, but staples are short, owing to the dry-weather conditions. A report from the Tsinan district also indicates a 10 per cent increase in acreage and crop conditions 20 per cent better than last year. (Cable from Commercial Attaché Julean Arnold, Peking, June 18.)

Textile Demand Active at Frankfort Fair.

The demand for cotton goods, shirtings, underwear, and everyday articles of clothing was very heavy at the Frankfort spring fair. Business in silks, laces, curtains, and carpets was less satisfactory, and exhibitors were limited mostly to domestic manufactures. Sales were principally for the domestic market, a few Dutch, Swiss, and Scandinavian buyers being present. (Consular Clerk Ivan Lovretsky, Frankfort-on-Main, Germany, April 25.)

Wages in the German Textile Industry.

Average wages during March in the textile industry for the 14 principal manufacturing districts of Germany had increased 43.3 per cent for male and 44.9 per cent for female skilled workers, as compared with February, 1923. Details of the wages paid, together with comparisons of pre-war rates, are included in report No. 95532, which will be made available upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, D. C. (Consul Louis G. Dreyfus, jr., Dresden, May 2.)

Montevideo Wool Shipments During March.

During March 9,683 bales of greasy wool and 246 bales of washed wool, totaling 9,929 bales and weighing 10,291,705 pounds, were shipped from Montevideo, according to unofficial, but reliable, trade figures. The principal points of destination were: Boston, 3,998 bales; Dunkirk, 2,057; Hamburg, 1,477 bales; New York, 816 bales; Rotterdam, 358 bales; and Philadelphia, 201 bales. Shipments during March, 1922, were recorded as 13,031 bales, weighing 13,333,799 pounds. (Vice Consul Sherwood H. Avery, Montevideo, Uruguay, April 18.)

U. S. Cotton-Cloth Exports to Latin America Show Increase.

For the 10 months ended April, 1923, exports of cotton cloth other than duck showed an increase of 200 per cent to Cuba and of 47 per cent to South America over the shipments for the corresponding period of 1922. Sales to Cuba rose from 19,930,772 square yards in 10 months ended April, 1922, to 59,871,573 square yards in the like period of 1923, and South American purchases of cotton cloth increased from 84,180,165 square yards in 1922 to 123,731,158 square yards in 1923. This gain is distributed as follows: Argentina, 5,000,000 square yards; Chile, 7,500,000 square yards; Colombia, 14,500,000 square yards; Peru, 4,000,000 square yards; and other South American countries, 8,000,000 square yards.

BRITISH PIECE-GOODS EXPORTS TO LATIN AMERICA.

Trade Commissioner Hugh D. Butler, London.

The British export trade in cotton piece goods with South and Central America has passed through a most unsatisfactory period during the past two years. Latin American purchases of cotton piece goods in 1913 amounted to 9.9 per cent of the total exports of British piece goods to all countries, and to the reduced figure of 7.6 per cent in 1922. In round numbers the total yardage of piece goods shipped to Latin America from Lancashire in 1921 amounted to only 194,000,000 square yards, as compared with 704,000,000 linear yards in 1913. During 1922 a very substantial improvement took place, shipments mounting to about 320,000,000 square yards—an increase of 65 per cent over the 1921 total. For the first four months of 1923, shipments amounted to 139,000,000 square yards, which means that if the same rate were maintained throughout the remainder of the year 1923, the annual figure would amount to over 400,000,000 square yards—only a fair improvement over the total for 1922. It is impossible to estimate the extent to which the movement of old high-priced stocks from Great Britain to oversea warehouses influenced 1922 and 1923 exports, but there can be no doubt that this factor is of diminishing importance.

In the following table, showing British cotton piece-goods exports to the principal Latin American countries, the principal feature is the strength of the demand for bleached goods, as compared with greys, printed, etc., particularly in 1922, when purchasers favored white goods even more, proportionately, than in the last pre-war year.

British cotton piece-goods exports to principal Latin American markets.[1]

Cotton piece goods.	1913	1921	1922	1923 [2]
	Yards.	*Square yards.*	*Square yards.*	*Square yards.*
Grey	48,424,200	9,969,400	16,499,300	8,077,800
White	229,315,600	73,873,300	138,630,400	52,273,900
Printed	143,031,400	33,971,800	49,624,900	24,271,000
Dyed in the piece	183,626,000	53,295,400	85,128,000	40,386,300
Yarn dyed	100,114,300	23,759,600	29,366,400	14,181,600
Total	704,511,500	194,469,500	319,249,000	[3] 139,190,600

[1] Paraguay, Bolivia, French and Dutch Guiana, Panama, Santo Domingo, Haiti, and Falkland Islands are not included in this table, nor are they considered elsewhere in this report, as the data is not of sufficient importance to be itemized in the trade figures.
[2] January to April.
[3] Figures for 1923 include Ecuador's total of 3,758,300 square yards.

Principal Latin American Markets for British Cotton Piece Goods.

A perusal of figures for shipments to the 11 principal Latin American markets, as listed in the monthly returns of the British Board of Trade, reveals the fact that two of the "A. B. C." markets (Chile and Argentina) recently have purchased British cloth in quantities more nearly approaching the pre-war normal than was true of Brazil or any of the minor markets. The Peruvian situation has improved more rapidly than that of the other small countries, while the business with Cuba and the small Central American countries has only made a slight recovery toward the 1913 pre-war normal, and Mexican trade went from bad to worse in 1922 and the first four months of 1923. Total shipments to these markets were as follows:

British exports of cotton piece goods to principal Latin American markets.

Country of destination.	1913	1921	1922	1923 [1]
	Yards.	*Square yards.*	*Square yards.*	*Square yards.*
Argentina	199,118,300	102,715,700	149,419,200	52,670,900
Brazil	96,537,900	16,341,700	25,021,400	12,005,100
Chile	61,740,100	17,001,900	38,822,000	18,514,400
Colombia [2]	79,842,800	8,680,300	26,524,500	15,369,100
Peru	28,809,100	5,450,800	11,372,600	6,280,300
Uruguay	38,153,000	8,188,200	13,616,500	4,646,500
Venezuela	34,721,700	4,230,700	10,382,700	6,952,400
Ecuador				3,758,300
Central America	46,117,200	6,892,500	13,135,300	4,747,400
Cuba	55,497,400	6,216,100	7,517,900	5,509,300
Mexico	22,884,100	10,474,200	7,360,800	2,694,200
British West Indies and British Guiana	41,089,900	8,277,400	16,076,100	6,042,700
Total	704,511,500	194,469,500	319,249,000	139,190,600

[1] January to April. [2] 1913 figures include Panama.

Argentine trade in 1922 showed improvement over that of 1921 in all classifications except yarn-dyed cottons. Figures for the period (January to April, 1923) recorded an improvement, which is spread throughout all five classifications. Bleached shipments during 1922 were actually larger than in 1913.

Chilean cloth purchases of all sorts in 1921 dropped to the low level of less than 30 per cent of 1913, but the recovery was rapid as the exports of 1922 were more than twofold those of the previous year, and in the past four months a further 40 per cent advance over the average monthly shipment of 1922 was recorded. If account is taken of the fact that 1913 figures are in linear yards (a reduction of 7 per cent should be made in order to make the figures comparable with square-yard figures of later years), it will be seen that Chilean 1923 purchases are not much less than the monthly average in 1913. This is due to an increased demand of bleached, printed, and colored cottons.

Although a consistent improvement is evident in 1922 and 1923, Brazilian trade for the first four months of this year is still only about 40 per cent of the average monthly figure for 1913.

The exports to Peru in 1921 were less than 20 per cent of those in the last pre-war year. A rapid recovery developed in the first four months of 1923, so that the movement of goods thus far this year is at a rate of about 65 per cent of that of the pre-war figure.

British Exports to Minor Latin American Markets Show Decline.

Figures for the principal minor markets are included in the tables, and it will be seen that the trade in 1921, in the midst of the depression, dropped to insignificant proportions, and that the exports to these smaller undeveloped countries suffered great declines. The Central American figures include Guatemala, Honduras, British Honduras, San Salvador, Nicaragua, and Costa Rica. Of these, the Guatemalan trade fared best in 1921—the last year for which details are available—when the total exports amounted to 2,318,000 square yards (about one-fourth of the pre-war trade), while the movement of goods to Nicaragua and Costa Rica was very slight, diminishing almost to the vanishing point. Even though sufficient statistical data are not available to draw satisfactory conclusions as to the trade with Paraguay, Ecuador, Bolivia, Santo Domingo, Haiti, French and Dutch Guiana, the Falkland Islands, and Panama, it is quite safe to assume that the trade with these countries has pursued much

the same course as trade with the other minor markets included in this survey. The inclusion of the Panama figures in the Colombian 1913 total is of but slight importance, as exports to the smaller country amounted to less than 1,300,000 square yards in 1921.

Factors Influencing Latin American Trade.

In general Latin American trade, consistent with developments in the other general divisions of the British world market, improved most rapidly in those countries, such as Argentina and Chile, where industry and distribution are best organized and where the export demand for native products has begun to revive, as in wool from several South American countries, hides and skins from Argentina, sugar and cotton from Peru, nitrate from Chile, and increased fruit shipments from a wide range of countries. The exchanges, in terms of pounds sterling, have had a tendency to go against Latin America during the year 1922 and up to the present time. On the other hand, two favorable factors are the gradual reduction in freight rates to and from British ports and the diminution of old high-priced stocks which have blocked the channels of trade since the disastrous post-war boom.

South African Cotton-Goods Buying Cautious.

Cable from Trade Commissioner P. J. Stevenson, Johannesburg, June 15.

South African imports of cotton manufactures for the first quarter of 1923 amounted to £1,581,000, of which £925,000 were credited to piece goods and £245,000 to hosiery, including underwear. It is believed that imports for the second quarter will be smaller.

Stocks are normal or slightly below. Buying is cautious, as importers are expecting lower prices, but business is expected to improve in July and August after stock taking. Wholesalers are cautious in granting credits.

High prices are proving a handicap to American sales except in heavy-weight piece goods and hosiery, both of which are selling freely. Generally speaking, the bulk of the business is going to England.

Denims and cottonades are not in demand because of the high prices asked. In prints, Italian and German competition is keen. Sterling prices of German prints are the same as they have been for the past two years. Orders for indigo stripes are much below the 1922 volume.

The South African trade in wool goods is negligible.

Indian Cotton-Goods Market Dull.

Cable from Consul Harold Shantz, Calcutta, June 15.

May imports of piece goods into India were 12 per cent less than in April. Bonded warehouse stocks in all India on April 30 totaled 7,600,000 yards of piece goods—an increase of 56 per cent over the previous month, but 31 per cent less than stocks on the corresponding date of 1922. Mill stocks throughout India are very large.

The Bombay mills will again consider working short time. The Ahmedabad strikes have been settled and three-fourths of the workers have returned.

The cotton-goods market is very dull. Calcutta prices generally have shown a steady decline since May 1. Stocks of one large Calcutta importer are nearly four times larger than during all last year, due chiefly to the fact that dealers are awaiting lower prices.

The general opinion prevails, however, that stocks are small in consuming centers, that the warehouses are not overstocked, and that prices have reached the bottom. It is believed that if the monsoon is favorable the demand will be much improved.

Australian Textile Market Overstocked.

Cable from Trade Commissioner J. W. Sanger, Melbourne, June 18.

Australian imports of apparel for the 10 months ended April 30 amounted to £7,110,000, as compared with £4,180,000 for the corresponding period of 1922. Imports of textiles for the same period of 1923 total £27,500,000, as against £19,410,000 of a year earlier.

There has been considerable overstocking in apparel and textiles, due to competitive buying, together with unusual seasonal conditions. Present indications are that the future will show a sharp decrease in the imports of these two commodities.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, western Europe: Belgian textile situation strengthened.
Cable review, eastern Europe:
The Greek textile industry.
Polish importation of cotton resumed.
Cable review, Far East:
Japanese agreement to limit cotton yarn production.
Chinese cotton and silk markets.
Australian wool clip and exports.
Japanese stocks and exports of silk and cotton.
Tariffs and trade regulations:
Russia—Export of wool restricted.
France—Export of rags and wastes restricted.
Mexico—Import duty on handkerchiefs increased.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce or its district and cooperative offices by referring to the reference numbers given. Where no reference number is given further information is not available.]

Canada.—One of the large Canadian municipalities is considering the installation of a central heating system in connection with the electric-light and power works. Reference No. 94440.

New electrical and automobile buildings are to be erected for the Canadian National Exhibition, held annually at Toronto. Chapman & Oxley, of Toronto, are reported to be the architects. (Consul Chester W. Martin, Toronto, Canada, May 16.)

Preliminary studies of the possibilities for a large cold-storage plant are being made by one of the largest Canadian cities. Financial assistance may be secured from the Provincial and Federal Governments. Reference No. 95860.

Argentina.—Preliminary specifications have been received covering the erection of an oil refinery. Bids will be opened on August 15, 1923. Only a single copy of these preliminary specifications is available, which will be lent to firms in the order in which requests for it are received. (Commercial Attaché Edward F. Feely, Buenos Aires, May 23.)

Spain.—A municipality of Spain is preparing to issue 6,650,000 pesetas, par value, of bonds for the improvement of the municipal waterworks system. It is stated that a Spanish bank will probably take up the bonds and that the contract for the construction work will be given to Spanish firms. Reference No. 95631.

Peru.—Reports state that arrangements have been made for the so-called sanitation loan. The total amount will be $25,000,000. No details are available excepting that the Banco Italiano of Lima is representing the banking interests.

Latvia.—Press reports from Latvia state that the Cabinet has allocated large sums for the building of hydroelectric stations on the Dvina River. Apparently an attempt was made to interest foreign capital without much success. It is said that the total available power at four sites is 375,000 horsepower.

France.—Additional oil-handling and tankage equipment is to be provided at one of the French ports and it is possible also that a refinery may be built. Reference No. 95634. (Consul Fred D. Fisher, Nantes, May 8.)

TOBACCO

DEMAND FOR AMERICAN TOBACCO IN HAITI.

Consul Damon C. Woods, Cape Haitien.

The United States is supplying Haiti with about 95 per cent of its total tobacco imports. During the fiscal year ended September 30, 1922, there were imported about 20,000,000 cigarettes, of which nearly 70 per cent came from the United States. In that year cigarettes made up one-fifth of the imported tobacco, and comprised the only item of tobacco imports which has increased consistently during the past three years both in number and in percentage of the total imports of tobacco.

Leaf Tobacco Constitutes Major Part of Imports.

Leaf tobacco constitutes virtually four-fifths of the entire tobacco shipments received. It is sold to individuals and to small firms which make cheroots and cigars for the local trade. The most popular of such products among the laboring people is a cheroot slightly larger than a cigarette, purchasable at 1 cent each.

Leaf tobacco is shipped to Haitian merchants in drums of 1,000 pounds and half-drums of 550 pounds, the latter being the more convenient for the local trade. The import tariff is based on an original duty of 0.10 gourde ($0.02) per pound, which with coefficients and port charges brings it to $0.27 per pound. This specific tariff schedule is applicable to all sorts of tobacco, but obviously bears most heavily upon low-priced bulk tobacco.

Except for small patches on the farms there is no tobacco production in the country, although the soil and climate of Haiti have been considered as well adapted to tobacco culture.

CIGARETTE MARKET AT ANTWERP.

Consul George S. Messersmith, Antwerp, Belgium.

Competition in the cigarette trade in Belgium at present is extraordinarily keen, and it is said that only a few of the larger companies are making money. Since the war the consumption has increased enormously and the Belgian manufacture has likewise expanded, so that the local production of low-priced and medium-priced cigarettes is sufficient to meet the demands of the local trade.

The average Belgian smoker wants a mild cigarette with the taste of oriental tobacco. The largest sellers are made of tobacco from the Near East, and some Chinese tobacco is also used. The demand for American cigarettes made of Virginia tobacco has steadily decreased, for it appears that they are too strong for the average Belgian smoker.

A small amount of expensive English and Egyptian cigarettes is sold in Belgium to a restricted class who can afford to pay the high prices. It does not seem possible for American cigarettes to compete at this time with cigarettes manufactured in the country, as the former have to pay not only the 12 francs per kilo import duty for manufactured tobacco, but before the cigarettes are taken out of the customs the internal revenue stamp has to be placed on each package by hand, while this is done by machinery in the Belgian factories. As the most popular cigarettes now sold in Belgium retail for 1 franc for a package of 20 (6 or 7 cents at present), the difficulty of introducing American cigarettes is apparent.

RUBBER

P. L. Palmerton, Chief, Rubber Division

RUBBER PRODUCTS.

RUBBER FOOTWEAR MARKET IN BRITISH SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, May 9; Trade Commissioner P. J. Stevenson, Johannesburg, April 10.

There were 383,246 pairs of rubber boots and shoes, valued at £53,589, imported into South Africa during 1922. Of this total, 175,150 pairs, valued at £24,867, came from Great Britain; 164,981 pairs, valued at £18,147, from Canada; and 35,429 pairs, valued at £9,056, from the United States. The above figures include rubber boots and shoes, tennis and gymnasium shoes. There is practically no demand in the Cape Town consular district for rubber boots, the principal market for which lies in the Transvaal where the mining industry is located. Rubbers, or goloshes, as they are called here, find a ready sale but in smaller quantities than would be sold under similar conditions in the United States. Rubbers are seldom worn outside of the rainy season, which lasts from May to August. Tennis is a popular game in South Africa, and there is an active demand for rubber-soled tennis shoes. Plantation crêpe-soled tennis shoes were recently introduced in this market and have proven very popular. American firms would do well to give more attention to this phase of the market. The new customs duty on rubber boots and shoes is 30 per cent ad valorem. A rebate of 3 per cent ad valorem is granted on British and Canadian manufactures. Rubber boots and shoes are generally imported by wholesale importers of footwear.

Market Worthy of Closer Attention.

Practically no rubber footwear is manufactured locally. The new tariff should not injure sales of American footwear, but should favor United States shippers, since the preferential in favor of British and Canadian manufacturers has been reduced from 15 per cent to 10 per cent. The importance of the South African market for rubber footwear, especially canvas rubber-soled footwear, makes it worthy of close attention by United States manufacturers and exporters. Canadian firms first began to ship to this market in 1916, when 176 pairs of rubber footwear were imported from that source, while British firms supplied 203,761 of the total 245,260 pairs imported and the United States 23,308 pairs. The Canadian trade appears to be firmly intrenched, and only sustained effort on the part of American firms will enable them to gain the share of the trade to which the high quality and reasonable prices of their products entitles them. Inasmuch as the market has imported an average of 385,000 pairs annually in recent years, it is evident that its cultivation might prove highly profitable. During 1922 United States exports of rubber footwear to British South Africa consisted of 3,655 pairs of rubber boots, 8,209 pairs of rubber shoes, and 20,142 pairs of canvas rubber-soled shoes. During the first four months of 1923 the exports of the various types were 5,743 pairs, 2,491 pairs, and 18,024 pairs, respectively, a healthy increase over the corresponding period of 1922.

Possible Expansion of Rubber Heel Trade.

The rubber heel trade is also increasing in volume. In 1922 United States exports of rubber heels and soles to this market amounted to 33,634 pounds, valued at $16,564; during the first four months of 1923 the amount was 27,624 pounds, valued at $7,598. The local shoe manufacturing industry is able to supply 75 per cent of the leather footwear requirements of the country, and recent tariff increases will render competition through importation more difficult than before. An attempt is being made to induce shoe manufacturers to use rubber heels for original equipment. In 1921 there were 137 factories, employing 2,742 people, which produced 1,506,061 pairs of boots, shoes, slippers, and veldschoens valued at £1,053,227. The center of the industry is Port Elizabeth, although factories are also located at Cape Town and other cities. About 20 or 25 large-scale factories account for the bulk of the production, the remaining producers being relatively unimportant. Should these factories adopt the shaped heel for original equipment it would probably result in a change from the present preference for the cheap round English heels. (See Rubber Division booklet "Facts Affecting Importation of Rubber Products into British South Africa.")

CRUDE RUBBER.

NEW BOOM IN BRAZILIAN RUBBER.

Consul George H. Pickerell, Para, April 30.

On the strength of persistent buying orders for rubber, due, it is said, to reported restrictive measures initiated in the Malayan rubber industry, prices of Brazilian rubber firmed up considerably, but later weakened because of reports that the Malayan restrictions were being modified.

This buying movement, however, had one good effect which may result later in increased production, although it is yet too early to make any reliable prediction. Upon the strength of the increased prices offered for rubber the workmen have started to return to the seringaes (plantations), and it is reported that many of the seringaes have now doubled the number of workmen, and more are coming by every steamer. This movement has been largely aided by the Federal Government's decision to stop all work on a number of the public dams they were constructing in the State of Ceara, thereby releasing a large number of laborers. If upriver Acre continues to hold around its present price, about 600 reis per kilo (1,000 reis=1 milreis=10.16 cents at present exchange), there will be no difficulty in securing sufficient men to work the best seringaes, although their profits will depend considerably on whether or not they continue the present practice of raising their own supplies.

Java Planters Optimistic.

Consul Parker W. Buhrman, Soerabaya.

Rubber planters in the Java consular district are much encouraged by the increased price of rubber. There has been a marked advance in the price of shares in rubber estates. Rubber stocks have been moving more rapidly, due primarily to increased American buying.

Java is especially favored in the costs of production, owing to favorable labor conditions—that is, having laborers available on the ground—while in Sumatra and the Straits the greater part of the labor is imported. It is estimated that Java can produce rubber about 12 per cent cheaper than it can be produced in the Straits. At the same time, the necessity for economy during the depression has taught the planters that the same results may be obtained with less labor.

Executive salaries have also been reduced, and the estates are generally on a sound footing.

PAPER

John Matthews, jr., Chief, Paper Division

MARKET FOR PRINTING INKS IN CHINA.

Assistant Trade Commissioner A. Viola Smith, Shanghai, April 15.

The total annual consumption of printing inks in China aggregates only about $800,000. Approximately 85 per cent of the printing done at present is lithographic work, the other 15 per cent falling in the typographic category. Owing to the illiteracy of the masses in China, there is comparatively little demand for type or word printing, but pictures of every description are very popular, and consequently the printing of calendars, labels, and all sorts of posters constitutes the greater demand in the printing trade.

The origin of the printing ink consumed in China may be roughly estimated as: European, 10 per cent; American, 30 per cent; Japanese, 55 per cent; and Chinese, 5 per cent. The predominance of Japan in the trade is the result of proximity and low manufacturing costs, which advantage enables Japan to maintain adequate stocks without too heavy an investment. The competition in the trade is so keen that it is necessary to carry stocks locally, and this in many cases involves such a heavy investment on the part of European or American firms as to make the trade almost prohibitive.

The maritime customs returns for China do not separately classify printing inks, but the port return statistics for Shanghai, which is the port of entry for about 45 per cent of the imports into China, show shipments of printing inks during 1922 to have been 991,467 pounds, valued at $285,286. Unfortunately the port returns do not show countries of origin.

A number of years ago the Germans imported dry colors into South China and taught the Chinese how to manufacture their own inks, and Chinese printing inks are now used liberally among the smaller establishments. While the Chinese ink is inferior to imported inks, the small native dealers catering to the Chinese trade are concerned primarily with price rather than quality.

Colors of Ink in Demand—Printing Machinery.

There is very little magazine work done in China, the few periodicals that are published generally using ordinary news ink for the inside pages with a one-color cover. Importers carrying local stocks frequently mix their own inks according to specific demands made upon them by the trade. Black is, of course, the staple color, but there is a ready sale for bright colors, red predominating, with blue second and yellow third. There is also a small demand for greens and violets.

In general the printing machinery in use is of slow-speed type, but a few of the larger foreign establishments have introduced high-speed printing presses. Off-set machines have also been recently introduced.

Sales Methods—Ink Prices.

Local importers carry large stocks and operate direct with Chinese dealers and purchasers. In the interior cities the Chinese buyer usually appoints a representative in Shanghai to negotiate with the local importers. As stated above, the competition in this trade is very keen and only those importers who are in a position to carry local stocks are successful in getting the business. In many instances local importers also handle printing machinery, which is sold with the stipulation that the buyer will place all his ink orders with the firm.

Local prices on news ink run about 9 cents per pound, while those on high-grade red color run from $6 to $7.50 per pound.

Japanese Paper Production and Sales in March.

Commercial Attaché James F. Abbott, Tokyo.

According to the monthly bulletin of the Japan Paper Association, production and sales of paper in Japan during the month of March, 1923, are represented by the following figures:

Japanese paper production and sales in March.

Items.	Production.	Sales.
	Pounds.	*Pounds.*
Newsprint	26,500,294	29,611,710
High-grade print	10,123,176	11,598,144
Book paper	8,584,962	9,385,701
Colored paper, including print, wrapping, etc	487,569	879,629
Wrapping (not included above)	3,709,467	4,294,483
Match paper	1,008,883	1,243,724
Native and all other not mentioned above	11,210,047	14,320,128
Total	61,624,398	71,333,519

Strike in Norwegian Pulp and Paper Industries.

A strike has been declared in the Norwegian paper and pulp industries to take effect June 16, which will affect 14,000 workers in these industries, according to a radiogram from Trade Commissioner Sorenson, Copenhagen.

Canada's Exports of Pulp and Paper in April.

Consul H. Merle Cochran, Montreal, May 26.

Canadian exports of paper, wood pulp, and pulp wood for April, 1923, were valued at $10,047,648—a decline of $4,888,034 from those of March, but an increase of $3,080,945 as compared with April of last year.

The exports of paper in April amounted to $6,446,210; wood pulp to $2,951,262; and pulp wood to $650,176. Newsprint alone reached 87,783 short tons, valued at $5,866,001, of which $5,747,998 worth went to the United States. The bulk of the wood pulp, exports of which amounted to 58,050 tons during April, and all of the pulp wood, amounting to 74,438 cords, were also shipped to the United States.

Australia and Japan were the largest purchasers of book paper and bond and writing papers. Other buyers of these classes were Mexico, the United Kingdom, and New Zealand. Japan was the leading customer for kraft paper, followed by British South Africa, the United Kingdom, and Australia, while of paper board the United States took $174,218 out of a total export for the month of $252,551.

Of the total exports of wood pulp during April, 10,757 short tons represented sulphate, 12,149 bleached sulphite, 17,233 unbleached sulphite, and 17,911 tons mechanical pulp, reaching a total value of $2,951,262, of which $2,623,496 went to the United States, $148,591 to the United Kingdom, $109,770 to France, $59,355 to Japan, and $10,050 to Australia.

German Newsprint Prices.

Effective June 1 German inland prices on newsprint will be increased to 2,550 marks per kilo, states a recent cable received from Commercial Attaché Charles E. Herring, Berlin. Prices effective February 1 were 1,170 marks per kilo, and January 1, 560 marks per kilo.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

INDIA'S BOOT AND SHOE INDUSTRY AND TRADE.

William B. Douglass, jr., clerk in American consulate general, Calcutta, April 12.

The manufacture of boots and shoes in India has rapidly increased in the past few years, though it is still not carried on extensively. The Indian-made shoe is durable and cheap, but in general lacks the fine finish of the imported article. The domestic shoe has made but little progress in securing the favor of the European population, but it has become extremely popular among the natives, to whom cost means much and style and finish little. Although local manufacturers have been very active in the Indian market, they have made no attempt up to the present time to export boots and shoes.

Products of Indian Shoe Factories.

All standard sizes of American, English, and French types of men's boots and shoes are manufactured. Women's boots and shoes are not produced to any extent in the factories, although many are made by hand by the local cobblers. The wholesale prices range from about 2 rupees ($0.62) for men's leather sandals to about 14 rupees ($4.40) for a well-finished brogue. Unusual styles and specially finished shoes are higher priced. The retail prices of domestic shoes are difficult to determine owing to the prevalent system of bargaining.

There are also manufactured in India shoes and slippers of fiber and other material not leather. These shoes retail for about 1 rupee ($0.31) per pair and are very popular among the natives, who can not afford to buy leather shoes, and among the many Hindu castes whose rules forbid the wearing of leather. In addition to those made by machinery, there are great quantities of shoes, both of leather and other materials, made by hand and marketed by native or Chinese cobblers.

Imports of Leather and Shoe Machinery.

India is a great producer of hides and skins and supplies its factories with most of the raw material required. Tanned or dressed leather is, however, imported to some extent, and practically all of it comes from the United Kingdom and other parts of the British Empire.

The value of the boot and shoe manufacturing machinery imported into India during the past three years has shown a marked decline. These imports in the fiscal year ended March 31, 1921, were valued at 465,770 rupees, of which the United Kingdom supplied 40 per cent and the United States 60 per cent. During 1921–22 similar machinery to the value of 225,950 rupees was imported, of which the United Kingdom supplied 75 per cent and the United States 24 per cent, whereas during 1922–23 the total value of such imports was only 42,051 rupees.

Shoe Imports into India.

The chief competitors in India of the American manufacturers of boots and shoes are the British. The following figures show the total importation of boots and shoes into India and the principal countries of origin:

Imports of boots and shoes into India.

Boots and shoes.	1920–21	1921–22	1922–23
	Pairs.	*Pairs.*	*Pairs.*
Leather	660,481	93,945	122,008
Other materials	410,548	77,967	262,311
Total	1,071,029	171,912	384,319
Imported from:			
United Kingdom	710,623	110,945	254,379
United States	259,019	25,151	24,725
Other countries	101,387	35,816	105,215

Of the leather boots and shoes imported in 1921–22 the United Kingdom supplied 68,222 pairs and the United States 12,498 pairs, as compared with 405,338 pairs and 220,665 pairs, respectively, in the preceding year. Relatively the decrease in shoes imported from the United States was greater than the imports from the United Kingdom. During 1920–21 approximately 61 per cent of the imported leather shoes came from the United Kingdom and 33 per cent from the United States, while during 1921–22 the United Kingdom supplied 72 per cent of the total leather shoes imported and the United States only 13 per cent. During 1922–23 the United States appears at a still greater disadvantage, supplying but 6 per cent of the total shoe imports, both of leather and other materials, against the United Kingdom's 66 per cent.

From these comparisons it would seem that American shoes are losing rather than gaining popularity. On the other hand, an examination of the import figures for boots and shoes of other material than leather would indicate an increase in favor of the American-made shoe over the British. Of this class the United Kingdom supplied 74 per cent during the year 1920–21, and the United States 9 per cent, while during 1921–22 the United Kingdom supplied only 54 per cent of the total imports of boots and shoes of other material than leather, and the United States 16 per cent. Both countries, however, show a large decrease in 1921–22 from the high-water mark of 1920–21.

The Market for American Shoes.

The reason for this decrease in the number of shoes from the United States is to a great extent probably due to the decreased value of the rupee, which caused American manufactured shoes to retail at an appreciably higher price than British. On the other hand, the manager of one of the large department stores stated in an interview that British shoes were steadily decreasing in price and should soon be in a position to compete with domestic shoes.

There are no retail stores devoted exclusively to the sale of American boots and shoes, but several of the large department stores handle American footwear. These stores cater principally to the Europeans and the increased manufacture of domestic boots and shoes affects them but little. The British, who compose the bulk of the European population, create a great demand for the British product, which has the advantage of being cheaper in price than the American shoe. The following quotations of leading firms in Calcutta will give some idea of the present retail prices of high-grade imported leather shoes: American, 39½ to 85 rupees ($12.64 to $27.20); British, 12½ to 59½ rupees ($4 to $19); Indian, 8½ to 15 rupees ($2.72 to $4.80). Leather sandals of domestic manufacture retail from 2 rupees ($0.62) up. The average retail price for rubber-sole tennis shoes, both of American and British manufacture, is 8 rupees ($2.50).

The manager of the shoe department of a large local department store that has the agency of several well-known American shoe concerns states that there is a fairly steady demand coming for the most part from the American residents for shoes of American manufacture. There do not appear to be any large unabsorbed stocks of boots and shoes in the hands of the manufacturers and dealers in this territory, and if American maufacturers can compete with the prevailing low prices of the British products, there is no reason why the market for American boots and shoes should not steadily increase.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

PETROLEUM IMPORTS INTO URUGUAY.

Imports of petroleum products into Uruguay during 1922 showed little change as compared with those during the preceding year, the only marked difference appearing in the receipts of lubricating oil, which increased from 231,530 kilos in 1921 to more than 2,000,000 kilos in 1922. Comparative figures for the two years, as published in the Boletin del Ministerio de Hacienda, the official statistical publication of the Uruguayan Government, are shown in the following table:

Imports of petroleum products into Uruguay.

Products.	1921	1922
Lubricating oil.....kilos..	231,530	2,270,198
Fuel oil.....do....	105,476,000	121,729,203
Lubricating grease.....do....	91,683	152,876
Gasoline.....hectoliters..	47,674	46,713
Kerosene.....do....	222,359	238,922
Crude naphtha and benzine.....do....	148,784	142,633

NOTE.—One kilo=2.2 pounds; 1 hectoliter=26.4 gallons.

Uruguay offers a fair market for American petroleum products, chiefly gasoline and naphthas and illuminating oil. Exports of illuminating oil from the United States to Uruguay during 1922 totaled 5,956,260 gallons and of gasoline and naphthas 2,848,275 gallons, the shipments representing by far the largest part of the Uruguayan imports of these products. The fuel oil consumed in the Republic comes chiefly from Mexico and is used by packing houses, soap factories, breweries, electric-light plants, and for steam purposes in general, as well as for ship bunkering and railroad use.

Distribution Methods.

Montevideo is the distributing center for mineral oils in Uruguay, and the headquarters of the distributing companies are located here. There are three large concerns engaged in the sale of fuel oil, and these companies as well as several others also distribute gasoline and kerosene. The latter oils are imported entirely in containers, local regulations prohibiting their importation in bulk. The usual containers, cases and drums are used, although in Montevideo the concessionaires for the street supply stations of gasoline for automobiles and trucks make deliveries in tank wagons which are filled from cases at the warehouses.

Mexican Petroleum Notes.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, May 26.

Crude Production in March and April.

Official production figures place the output of crude petroleum in March at 12,371,203 barrels, as compared with 11,134,394 barrels in February, an increase of 1,216,819 barrels. The production during April is given in the Tampico Tribune as 11,605,000 barrels.

Registration of Coasting Vessels under Mexican Flag.

An extension of 60 days has been granted by the President of Mexico for the fulfillment of the regulation requiring the registration under the Mexican flag of all vessels engaged in the Mexican coastwise traffic, applying particularly to oil tankers engaged in transporting oil from one Mexican port to another. The previous regulation granted a period of 90 days for its fulfillment, this period expiring on May 27, and the present extension being granted until July 27.

Increase in Applications for Drilling Permits.

A great increase in the number of applications for drilling permits is reported by the Secretary of Industry and Commerce of the Mexican Government. It is said that many of these applications cover territory in which petroleum operations have not been previously carried on, special reference being made to the region along the Rio Grande between the States of Tamaulipas and Coahuila, where it is hoped to find a continuation of the oil deposits in Texas. The number of drilling permits granted during the first three months of the year totaled 234, of which 67 were granted in January, 81 in February, and 86 in March.

Extraction of Gasoline from Natural Gas.

A concession for the installation of plants for the extraction of gasoline from natural gas has been granted by the Department of Industry, Commerce, and Labor to Sr. Manuel Gomez, a Spanish subject. This is in accordance with the policy laid down in the decree of November 22, 1922, requiring the oil companies to make use of the natural gas flowing from oil wells which was formerly wasted in most cases. According to the terms of the concession, the concessionaire agrees that a sufficient number of plants will be installed within a period of five years to produce at least 25,000 cubic meters of gasoline per year. This concession is said to be in addition to a similar one granted to another party on November 28, 1922, which has not yet expired. It is said that there will be no conflict between the terms of the two concessions, however, and it is hoped that the carrying out of their terms will result in a reduction in the domestic price of gasoline.

Cable review, eastern Europe: Rumanian petroleum production.
Cable review, Far East: Japanese petroleum production.

COAL

COAL TRADE OF ASTURIAS, SPAIN.

Consul, L. G. Dawson, Santander, April 20.

The coal trade of the Province of Oviedo, Spain, is at present experiencing the most prosperous period since the development of the district, owing to improved railway facilities between the mines and the ports of shipment, more abundant labor, and other favorable features. This Province, known as the Asturian region, produces two-thirds of the bituminous coal of Spain and has almost a monopoly of the coal trade of the country. British coal is the strongest competitor of Asturian coal, but, owing to the demand from northern Europe, present imports from the United Kingdom are much less than usual despite the favorable rate of customs duties granted by the Spanish Government on British coal.

Coal production in the Asturian fields increased from 2,413,509 metric tons in 1913 to 3,409,676 tons in 1918. The production in 1921 was approximately 3,000,000 tons.

Mine Stocks Depleted—Port Congestion.

So great is the demand for Asturian coal at present that the stocks previously accumulated at the mines have been disposed of and coal is now being sold as fast as mined.

Asturian coal is shipped from the ports of Gijon and Aviles, both of which are connected by railway lines with the interior of the Province where the mines are located. Most of the coal transported from these ports is carried in small vessels of 200 or 300 tons. Larger steamers of 1,000 and 2,000 tons transport coal on the longer routes to the Atlantic and Mediterranean ports. Ships have to wait their turn to load, and premiums are being paid for priority in loading. Freights on ships having such priority are quoted at one or two pesetas per ton less than on ships having to wait their turn. According to recent reports from Gijon, there were 66 vessels loading or awaiting their turn at that port.

Rising Prices—Freights Easier.

The prices of coal have gone up with the greatly increased demand. Since February the increases in lump coal have been 10 or 12 pesetas, and on slack coal 8 or 10 pesetas. Present prices per ton are:

	Pesetas.
Screened coal	60
Siftings	50
Slack, gas and coke	40 to 42
Slack, current	35 to 38
Metallurgical coke	70 to 75

The above prices are f. o. b. vessel. (The exchange rate of the peseta on April 20 was 15.35 cents.)

Freight rates on coal from Gijon and Aviles to other Spanish ports have eased somewhat, as the strong demand for coal carriers has attracted to this traffic many vessels which were tied up during the shipping depression of the past two years.

British Coal in Germany.

Assistant Trade Commissioner W. T. Daugherty, Berlin, May 12.

Germany apparently broke all previous records by being the best customer for British coal in March, 1923. The amount of coal exported from the United Kingdom to Germany in March, 1923, was 1,836,399 long tons, against 1,000,097 tons in February and 521,854 tons in January. The situation in the Ruhr is the obvious reason for the increase. France was the second best customer for British coal in March, taking 1,805,214 tons, although it occupied first place, as usual, in January and February.

Imports of coal from eastern Upper Silesia seem to have fallen off, probably on account of high prices. Western Upper Silesian coal is likewise not selling as readily as might be expected, probably on account of reluctance on the part of consumers who may optimistically expect a further price decrease.

Additional information regarding coal appears in this issue under the following sections:

Cable review, western Europe: Spain makes inquiries for American coal.
Cable review, eastern Europe:
Coal production in Poland.
Greek production of lignite.

Japanese production of coal.
Coal shortage in New South Wales.

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

DECLINING MARK AFFECTS GERMAN LEATHER MARKET.

H. D. Sommerhoff, clerk in American consulate, Frankfort on the Main, May 1.

German purchases of foreign raw material were facilitated during the first part of April by the temporary seven weeks' stabilization of the mark and the prices of the short supply of domestic raw hides and skins were held down. This improvement in the situation, however, was accompanied by a further heavy loss of export trade. To improve domestic trade, prices were reduced by dealers and retailers, and leather manufacturers lowered quotations as far as possible, in view of high freight rates and wages, and advancing prices of oils, barks, chemicals, etc. Sales were concluded at fixed prices and a decided improvement in the general situation was noticeable, domestic orders for all kinds of leather increasing.

In the latter part of the month, after the fresh fall in the value of the mark (from about 21,000 marks to the dollar to 33,000), normal sale conditions were again abandoned and domestic prices advanced, leather manufacturers quoting goods on a foreign-currency basis. Exporters were able to reduce their prices, and in the last few days of the month there was an increase of foreign orders. The campaign against the Federal export taxes was continued, and leather was placed on the free list drawn up by the Government during the month. The German Government forbids exporters in the occupied territory to apply to the French authorities for export permits and to pay them export taxes.

Soaring Prices Reflect Drop in Mark.

The tendency at the hide and skin auctions in the first part of the month was firm and sales were satisfactory. The wholesale situation also showed a slight improvement. Later prices soared and were 30 to 50 per cent higher than in the beginning of the month and 60 to 70 per cent above the lowest March prices. The prompt advance in prices when the mark falls in value contrasts strongly with the slow downward trend after an improvement in its value. However, the sudden rise in prices was not solely due to the increased cost of foreign raw material, but also to a greatly increased demand. Leather stocks were very low at this time and manufacturers were forced to enter the market.

The domestic leather market was quiet with a firm tendency in the beginning of April. Trade was adjusted to the cutting off of the occupied territory. With the exception of the shoe branch, the leather industry was less affected by this than by conditions of exchange. The market was unfavorably influenced later on by the advance in prices of raw material and corresponding advances in leather.

The chief demand for sole leather was for heavier qualities. Owing to the general scarcity of money and stricter terms of credit, only most pressing needs were covered. The general supply was short and various wholesalers sold out of first-grade butts. Oak sole leather of foreign origin was offered somewhat cheaper than the domestic. The demand for shoe upper leather was slack in south Germany. Reports from the north show better conditions, and the chief demand was for chrome patent leathers, black and colored kid, and colored box calf. Prices increased in the last week of the month from 25 to 35 per cent. There was a fair demand for saddle and strap leather, but very few sales were effected. Old stocks of bag and case leather were exhausted during the month and it was necessary to place new orders. Business in the lighter neat and sheep leathers in all grains was satisfactory. Owing to the scarcity of foreign orders sales of finer leather, such as East Indian goat, crocodile, etc., were few.

Statistics of Imports and Exports.

The quantity of hides and skins entering into the foreign trade of Germany during the first two months of this year, as compared with the monthly average for 1922, is shown in the following table:

Germany's trade in hides and skins.

Classes.	Imports.			Exports.		
	Monthly average, 1922.	January, 1923.	February, 1923.	Monthly average, 1922.	January, 1923.	February, 1923.
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*
Lamb and sheep skins	79,600	54,200	68,700	2,500	2,400	3,400
Calfskins and neat hides	784,700	869,000	632,800	15,100	4,300	10,400

Leather Exhibitions.

Two fairs of importance to the German leather industry were held during April—the Shoe and Leather Fair at Leipzig in the second week and the Eighth Frankfort International Spring Fair in the third week. At the former the tendency was firm and business fair. At the Frankfort Fair the German leather industry was more extensively represented. The exhibition of leather goods was held in a new building covering 3,240 square meters of ground. The fair itself reflected the conditions of the month, the fall in the value of the mark, which took place about the third day, dividing business into two stages. In the latter orders fell off and sellers withdrew their goods from the stalls. Previous sales which had signified profits were now turned to losses.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

CABLE NOTES ON IMPLEMENT TRADE.

Brazil.—Implement stocks on hand in Brazil during the early part of June were low and imports were small as a result of the fluctuation of the exchange rate. Tractor sales are few, although it is expected that several large tractors which were purchased in 1920 will soon be disposed of. There is a small demand for cheap walking plows, cultivators, and disk harrows. Although conditions are practically the same as in May, there is a considerable improvement over the same month of 1922. (Commercial Attaché William L. Schurz, Rio de Janeiro, June 8.)

Chile.—Sales of agricultural implements in Chile continue slow, but show an improvement as compared with the same period of 1922. Indications are that there will be a good harvest and prospects are good for certain lines of implements, including hay presses. Tractors are selling very slowly and many have been sold at a loss in order to liquidate stocks. One large company has 10 tractors in stock which it is having difficulty in disposing of. However, the outlook for the sale of tractors is much better than a year ago. (Assistant Trade Commissioner Wm. E. Embry, Santiago, June 12.)

Peru.—Stocks of small agricultural implements in Peru are normal, while dealers are heavily overstocked with large implements. The market is still flooded with tractors imported in 1920, which are being offered at very low prices since the duty on tractors imported has been removed. The first tractor sales in three years have been reported recently. Harrows are selling fairly well, while cultivators are little used, as unsatisfactory types have been imported. Farmers are showing a disposition to economize by repairing old equipment, which would indicate that sales will not reach large proportions during the present season. (Acting Commercial Attaché W. E. Dunn, Lima, June 12.)

South Africa.—Agricultural implement stocks in South Africa are low in some sections and normal in others. Farmers are buying more freely than in 1922 and are better able to pay for their purchases. There have been increases in imports of implements in 1923, particularly of plows and windmills. Tractor stocks are large, while imports and sales are negligible. There is a general quietness in the trade, June not being the selling season for implements. Crop prospects are excellent and should stimulate buying of implements later on. (Trade Commissioner P. J. Stevenson, Johannesburg, June 15.)

India.—Stocks of agricultural implements are reported by Calcutta importers to be good but not excessive. Few tractors are being sold and a number which were imported in previous years are still on hand. (Vice Consul Harold Shantz, Calcutta, June 15.)

Tractors for Hauling Lumber in British Honduras.

Consul W. W. Early, Belize, April 28.

Tractors are being used in increasing numbers in the mahogany industry in British Honduras. For over 200 years there has been a more or less successful exploitation of the mahogany and cedar forests by means of primitive although expensive methods, due to the fact that a considerable quantity of timber was growing within a short distance of the long coast line of the colony and the numerous rivers which traverse its territory. However, the timber near the water has now been depleted and more modern methods of logging are required for the profitable exploitation of the stands of timber located at some distance from the water.

The result has been an increase in the use of tractors for hauling logs. The largest mahogany contractor in British Honduras has invested nearly $100,000 in tractors manufactured in the United States during the present mahogany season. Although this contractor is operating across the Hondo River in Yucatan, all the logs are to be towed to Belize for shipment. With the use of about 70 tractors this operator expects to get out about 5,000,000 feet board measure. Two British companies are making larger use of tractors in conjunction with logging railways and several smaller contractors are also using tractors. Statistics of imports are not available, but it is estimated that about 75 tractors have been imported in the past 12 months for hauling logs.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

AUSTRIAN BANK SHARES AND THEIR VALUES.

Trade Commissioner William Ford Upson, Vienna, May 16.

During the last few years preceding the outbreak of the war, quotations for Vienna bank shares were comparatively stable. The policy of the banks was to pay regular annual dividends, each varying only slightly from that of the preceding year. The adjustments of the various business yields in different years, necessary in following this policy, were made by allocations to or withdrawals from the reserves. Often these reserves amounted to very considerable sums, in some cases exceeding the total share capital, but they did not all appear on the asset side of the bank's balance sheet—a system tacitly tolerated by the authorities. Thanks to their reserves, open and hidden, the Vienna banks found themselves in a position to weather the very dangerous post-war days without any of the banks having to announce insolvency.

Nevertheless, as a result of the war, bank shares as well as industrial shares and property in general decreased greatly in price, calculated on a gold basis. Their rise in price, as expressed in paper crowns, has not been at all commensurate with the depreciation of the paper currency or even with the rise of industrial shares. No Austrian shares of any kind have paid substantial dividends since the war, and so they have been attractive only to the speculator or investor who wished to obtain control of a concern or was prepared to hold the shares for an indefinite time.

Until very recently most bank shares escaped the attention of speculators, even at times when speculation flourished most and industrial shares were subject to violent fluctuations. An exception to the general rule was made only in the case of banks which passed into foreign hands, as in the case of the Anglo-Austrian Bank and the Banque des Pays Europeans, the shares of which went up considerably. Most bank shares remained far behind the increased quotations for industrial shares.

Effect of Stabilization of Austrian Currency.

This situation has changed entirely with the stabilization of Austrian currency. Bank shares that received little attention before the latter part of 1922 have become of increasing interest in view of the fact that practically all of the Vienna banks have succeeded in the course of time in getting foreign capital, thus strengthening their position.

The shares of four Vienna banks, taking gold value as a basis, have shown increases, on an average, as follows: December, 1922, 28 per cent increase over November, 1922; January, 1923, 8 per cent over December, 1922; February, 1923, 24 per cent over January; March, 1923, 41 per cent over February; and April, 1923, 75 per cent over March. Within a period of five months the shares of these four Vienna banks, in terms of dollars, have thus appreciated about 333 per cent. The same calculation applied to 15 Vienna banks shows an average rise of 298 per cent within the five-month period. This sensational rise apparently is a mark of returning confidence in Austria on the part of the public and shows a favorable opinion of the future prospects of the Vienna banks.

Vienna Bank Shares and Values.

The Boerse, a leading Vienna financial journal, has made an interesting attempt to ascertain the value of each bank on the basis of the present rate at which its shares are quoted in the market and the number of shares outstanding. Figures for 11 leading Vienna banks in 1914, as compared with those for April 24, 1923, are given in the following table:

Capital, number of shares, and quotations of stock of leading Vienna banks.

Banks.	Capital.	Number of shares.	Quotation.	Total value.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

PROTESTING DRAFTS IN BELGIUM.

Vice Consul Harry Tuck Sherman, Antwerp.

In determining the advisability of protesting drafts in Belgium each case should be considered individually on its merits. In certain cases a potential customer of considerable value might be lost were a protest made for nonacceptance. Theoretically, however, it is advisable to make such a protest for nonacceptance, as this would prove the failure to take possession of the merchandise against acceptance, thus compelling the collecting bank to take charge of the landing and warehousing of the goods.

In dealing with an old customer temporarily embarrassed it must be borne in mind that a protest for nonpayment of an accepted draft is especially effective in Belgium, where severe laws exist to act as a preventive for such nonpayment. They include publication of the defaulter's name in the official gazette (Moniteur Belge) and the right of immediate legal procedure, including seizure and sale of goods. It may be said that a publication of a protest in the Moniteur Belge is so serious a matter that the good name and credit of a firm are thereby very greatly and often permanently injured. At the same time, failure to protest seriously weakens the creditor's remedies for recovery.

Cost of Protesting Based on Government Stamp Fees.

The cost of protesting drafts in Belgium is based on a schedule of Government stamp fees as follows: For drafts of 1 franc to 500 francs, 1 franc; 500 to 2,000 francs, 2 francs; 2,000 to 10,000 francs, 4 francs; and 10,000 francs and over, 6 francs. To the above official stamp fee must be added a fixed fee of 3 francs for every draft, for the bailiff. For regular customers and patrons the banks make no extra charge for protesting a draft, but for the casual patron they charge from one-tenth to one-eighth of 1 per cent. There is no difference in the cost of protesting drafts for nonacceptance and for nonpayment. Protests must be registered within four days.

Limits for Protest and Exercise of Rights Against Acceptor.

In order to protect fully the interests of the drawer or the indorsers, a draft must be protested for nonpayment or nonacceptance immediately after a lapse of 24 hours from the date of maturity or from the date on which it should have been accepted. If the date of maturity falls on a Sunday or on any legal holiday, the draft must be presented on the eve of that day. If the date of protest falls on such a day, the protest should be made the following day. In case nonpayment is not protested within 15 days, all recourse from the bearer against the indorsers is lost and only the recourse against the drawee subsists.

Under the laws of Belgium an agreement not to protest an accepted draft or to waive the usual suit 15 days after the draft has been dishonored is valid. The bearer must, however, inform the drawer and the indorsers within a fortnight of the nonpayment of the accepted draft in order to keep his recourse against them. Protests may be replaced if the bearer consents by a statement of the refusal to accept or to pay. Such a declaration must be made at latest on the eve of the last day available for the protest. It is inscribed on the draft or by a special agreement and is signed and dated by the acceptor or the drawee.

If the bearer of a draft exercises his individual rights against the acceptor, he must, if the latter resides within a radius of 50 kilometers from the place where the draft is made payable, summon him before the court within 15 days from the date of the protest. The summons must mention the protest. The time limit above mentioned is increased one day for every 50 kilometers' increase in the radius from the place where the draft is made payable.

When drafts drawn in Belgium and made payable outside of that country are protested, the drawer and indorsers may be sued within the following time limits: Payable in England and countries contiguous to Belgium, one month; payable in other European States, or States on the African or Asiatic coasts of the Mediterranean, or on the Asiatic coast of the Black Sea, two months; payable outside of Europe, but within the limits of the Straits of Malacca, and of Cape Horn, five months; payable beyond the limits of the Straits of Malacca and of Cape Horn, eight months. The above time limits are doubled for oversea countries in case of naval warfare.

Procedure in Case of Bankruptcy or Insolvency of Drawee.

In case of bankruptcy or insolvency of the drawee occurring between the acceptance and the date of maturity, the bearer may have the draft protested and exert his recourse direct against the indorsers. When an extension is agreed upon, a new draft must be made, as the original draft becomes a mere acknowledgment of the fact to the drawer. If an extension were inscribed on the original draft, the Belgian Treasury would be deprived of its stamp fee and the draft would thus be without value.

Initiative of Bank in Settlement of Claims Limited.

A bank can not in any case take the initiative with regard to the settlement of claims arising out of drafts on behalf of third parties unless its directors decide to do it at their own risk and peril. It is therefore the rule to follow strictly the instructions of the party intrusting the draft to the bank. In cases where difficulties are met with, new instructions are asked for. Nevertheless American banks abroad take particular pains to defend the interests of their American patrons in this respect.

Legal Aspects of Trade in Portugal.

Trade Information Bulletin, No. 103, entitled "Legal Aspects of Trade in Portugal," by Consul General W. Stanley Hollis, Lisbon, has just been published and may be secured upon application to the district or cooperative offices of the Bureau or to the Division of Commercial Laws at Washington.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

PACKING FOR LOWEST DUTIES IN FRANCE.[1]

William H. Windom, Division of Foreign Tariffs.

The operation of a general principle in the assessment of specific duties in France and certain other countries of Continental Europe is in marked contrast to the practice prevailing notably in Latin American countries, which have adopted no general system to simplify procedure. As a rule, goods that are subject to duty above a certain rate are assessed in France on the net weight (actual or legal), whereas merchandise subject to a lower rate is assessed on the gross weight (weight of the goods and that of all the packing, both outer and inner). In other words, it has been deemed fair to tax packing—itself of no commercial value—only when the duties are on a low level, thus eliminating for the majority of goods the factor of the weight of the packing as affecting the amount of duty payable. The direct opposite of this principle is seen in Switzerland, where all goods are levied on the gross weight, the packing on highly dutiable goods being, therefore, more heavily taxed than the packing on merchandise of a low duty value. Nevertheless, there are certain exceptions to the general rule in France and certain regulations governing the application of the general rule which should be understood by the exporter who recognizes proper packing as an important factor in export shipments.

Legal Net Weight and Actual Net Weight.

In France goods dutiable on net weight are assessed on the "legal" net weight when the importer demands liquidation on that basis or when he fails to request that the liquidation be made on the basis of "actual" net weight. By "legal" net weight is meant the weight of the goods and all of the packing, both outer and inner, less certain percentages of the gross weight, called tare allowances. The "actual" net weight is the weight of the merchandise without any packing whatsoever.

In addition to goods dutiable on the gross or the legal or actual net weight there are a few commodities dutiable on the semigross weight (weight of goods and of the inner packing).

Application of Net and Gross Weights.

The limit of duty above which goods are dutiable on net weight and on or below which goods are dutiable on the gross weight is, for merchandise subject to the minimum and intermediate duties (practically all merchandise from the United States), 30 francs per 100 kilos. For merchandise subject to the general tariff, the rate is 60 francs per 100 kilos. This duty is the basic duty—that is, the normal duty provided for in the French tariff schedule, not augmented by the coefficients of increase which have been applied since 1919 to these duties as a temporary measure.

System of Tare Allowances.

As stated above, duties are assessed on the basis of legal net weight, unless the importer prefers to have them assessed on the actual weight of the goods. The following table shows the tare allowances applied to goods in general and to certain of the few goods that are subject to special tare regulations:

Articles.	Packing.	Tare allowance.
Products in general, dutiable on net weight.	Barrels and cases (other than crates)	12
	Bales, bundles, bags, baskets, crates	2
Cotton yarns	Boxes (other than crates):	
	Solid, of heavy boards (yarns on bobbins).	17
	Other	12
Tin plate	Wooden cases (other than crates)	7
Oils, crude or refined, and essences of petroleum or shale.	Petroleum casks	20
Heavy oils and mineral oil	do	17

It is thus seen that for merchandise dutiable on legal net weight, as well as merchandise dutiable on gross weight, a saving in duties may be effected by reducing the weight of the packing to a minimum consistent with safety in transit, as the duty is computed on the basis of the gross weight after deducting certain fixed percentages. In the desire to achieve this economy, however, the use of packing of an exceptional character will probably result in no advantage, for the French law expressly states that goods dutiable on net weight, which are imported in kinds of packing not specified in the schedule of tare allowances, are assessed on the actual net weight. In certain cases where it is impracticable to apply the tare allowance, the goods are invariably subject to duty on the actual net weight. Thus, products of different kinds dutiable on the net weight, but packed in the same container with goods dutiable on the gross weight, are dutiable on the actual net weight. Dutiable on the actual net weight are also products imported with inner packing that is subject to duty separately and merchandise imported in bulk.

Special Regulations on Dutiable Weight.

It has been stated that articles of a low-duty value are assessed on the gross weight. Certain articles are, however, invariably dutiable on the gross weight, irrespective of the amount of duty leviable. These are unfinished watchcases (minimum tariff), beer, and hothouse fruits. When a package incloses articles of different kinds, all dutiable on gross weight, the weight of the packing is proportionately distributed among the articles contained in the packing. When articles dutiable on the gross weight are included with articles otherwise assessed, the duty is levied on gross weight only on the articles subject to duty on gross weight and only in proportion to their relative weight.

Packing That Has No Commercial Value.

Packing is in principle considered as having commercial value and is consequently subject to duty separately. There are various exceptions to this rule, however. Packing is not separately dutiable when im-

[1] This is the second article in the series on packing for lowest duties.

ported with merchandise dutiable on the gross weight, if the rate of duty on the packing does not exceed by 10 per cent the rate on the containers. Nor is packing separately dutiable when imported with merchandise on the semigross weight, or when definitely specified in the customs law as having no commercial value. With a knowledge of these exceptions, the shipper will never be in the embarrassing position of forcing upon the consignee unjustifiable expenditure for customs charges on packing.

Packing specified as having no commercial value is divided into two classifications—outer and inner packing. Such outer packing includes: Boxes and barrels of common wood; drums or cylinders of sheet iron or steel used to transport chemical products that can not be extracted without spoiling the container; receptacles of tin plate, soldered or crimped; boxes or receptacles of old cardboard; packing cloth; matting; coarse baskets; common paper.

Inner packing of no commercial value includes: Tin cans, soldered or crimped; cotton muslin or similar fabric used for attaching embroidery; paper used for wrapping or separating articles; rolling boards for fabrics; straw for packing goods; cloth for wrapping meat, hams, etc.

Packing That Has Commercial Value.

Outer packing considered as having commercial value and therefore dutiable, includes the following: Cans or bottles not soldered; cases or casks of wood more carefully manufactured than ordinarily, such as caskets, painted or varnished; cases or barrels of hardwood; cylinders containing hops; casks or barrels of sheet iron or of wood not ordinarily used; leather bottles; receptacles, cylinders, and drums of iron or steel that can be opened without damage to receptacles; receptacles of iron or steel for liquefied gas; carboys or bottles of steel, stone, etc., containing ammonia, acids, etc.

Inner packing of dutiable value includes the following: Advertisements wrapped around bottles, boxes, etc.; cigars and cigarette boxes; boxes containing letter paper; boxes or cases containing musical and scientific instruments, etc.; boxes of cardboard in good condition, including papers, prospectuses, etc., wrapped around them; flasks and bottles; cases other than usual, or not indispensable for the transportation of the goods.

Packing of Goods Subject to Ad Valorem Duties.

The cost of the inner and outer packing is included in the dutiable value of goods subject to ad valorem duties, except when the packing is separately dutiable. The importer may request, however, that packing having a commercial value be included in the dutiable value of the merchandise.

RAILWAYS.

Freight Thefts on Russian Railroads.

Abstracted by the Eastern European Division from the Soviet Journal of Transport, Moscow, March 31.

Compilation of data regarding freight thefts on the railroads of Soviet Russia was inaugurated by the Commissariat of Transportation in 1920, but owing to the fact that the monthly reports of the individual railroads (at that time the only source of information) contained data on the respective lines only and not on thefts discovered at the points of destination situated on other lines, the figures for 1920 and 1921 were incomplete and greatly underestimated.

The system of statistics was perfected in 1922 by issuing quarterly reports, in addition to the monthly ones, which revealed a wide disparity between these two kinds of reports amounting to about 125 per cent; the quarterly reports showed a total of stolen freight during 1922 of 11,000,000 poods (177,420 long tons), as against 4,900,000 (79,000 tons) shown by the monthly reports.

On the comparable basis of the monthly reports, as the only available data for the first two years, loss of freight resulting from pilferage on the Russian railroads shows a heavy progressive increase from year to year—partly in line with the increase of freight traffic by 1,100,000 poods in 1920, 2,400,000 poods in 1921, and 4,900,000 poods in 1922. The value of the 11,000,000 poods of freight stolen in 1922 is estimated at 37,000,000 gold rubles.

Additional information regarding railways appears in this issue under the following sections:

Cable review, eastern Europe: Greek railways required to deposit percentage of income with National Bank.
Cable review, western Europe:
Earnings of Spanish railways in 1922.
Purchase of new equipment by Spanish roads.

COMMUNICATIONS.

Radio News From Abroad.

Radio Service, Holland to Dutch East Indies.

Radio service between Holland and the Dutch East Indies is now in operation. The tariff is 2 guilders per word for ordinary and 6 guilders for urgent messages; messages sent by the Government cost 1.55 florins. For the present, the service is restricted to messages filed in either the Netherlands or the Dutch East Indies. (Commercial Attaché Paul S. Guinn, The Hague, May 8.)

Mexican Government to Install New Wireless Stations.

The Mexican Government intends to change the apparatus in use in its wireless stations from the present spark system to the continuous-wave class, according to a report from the Director General of Telegraphs. It is said that four modern stations of this class have already been ordered from Germany at a cost of $200,000. These are to be installed in Mexico City, Merida, Vera Cruz, and Tampico. Stations of the old spark type which already exist at these points are to be transferred and set up, respectively, in the Islas Marias; in La Paz, lower California; and in Guadalajara, Jalisco; and Acapulco, State of Guerro. Under the spark system the Government has been able to communicate only with Nauen, Germany, and with the Lafayette station at Bordeaux, France. (Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, May 18.)

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

GENERAL TARIFF CHANGES.

NORWAY.

Cable from Consul General A. G. Snyder, Christiania, June 12 and 18.

General Increase in Import Duties.

A bill passed on June 11, 1923, provides for an increase of 10 per cent of the duties on sugar and coffee, and an increase of about 33⅓ per cent of the duties on all other articles not covered by treaty.

This law replaces the law of February 9, 1923, which provided for a 20 per cent increase on all duties, except those on coffee, sugar, alcohol, and articles covered by treaty.

The articles on which the duties have been fixed by treaty comprise chiefly the following: Fruits, nuts, rice, cork, wines, sugar, and coffee.

POLAND.

Consul General L. J. Keena, Warsaw, May 19, and Assistant Trade Commissioner Elbert Baldwin, Warsaw, May 23.

Increase in Duty Coefficients.

The general duty coefficient has been raised from 4,000 to 6,000, and the luxury duty coefficient has been raised from 6,000 to 9,000 by a joint order issued by the Ministers of Finance and Industry and Commerce.

Additional Articles in Luxury Duty List.

The following articles are now subject to the luxury coefficient of 9,000 instead of the general duty coefficient of 4,000 as heretofore, according to a joint order of the Ministers of Finance and Commerce:

(Item 6–2b) fresh oranges, large and small; (item 18–2, 3 and note) roasted coffee, in the bean or ground, substitutes for coffee, crushed or ground, including the immediate packing, and coffee extract and essence; (item 20–1) all kinds of tea, except tea elsewhere specified; (item 21–4) cigars, large and small size; (item 24–1, 2) ground cocoa without sugar, cocoa with sugar, including the weight of the immediate receptacle; (item 77–1b, c, note, and 2) glassware for perfumes (bottles and small bottles of the weight of 20 grams and less); (item 77–2b) chemical apparatus (glass instruments); (item 77–3) manufactures of white and half white glass, polished, smoothed, cut but without other ornamentation, excepting optical glass in pieces that has been smoothed or polished on not more than two sides; (item 77–4b) manufactures, except those elsewhere specified, of bottle glass, colored glass, glass in two layers of a milk white color, plate glass, frosted glass or iceglass, ground, polished, or cut; (item 77–5) products mentioned in item 77–2, 3, and 4, if they are mentioned in this list, with additions of other materials provided they are not used as ornamentations; (item 117–4) oil from rapeseed, hemp, and flax; (item 131–2) zinc oxide; (item 149–2a) articles made of copper, copper alloys and other metals and alloys mentioned in item 143; spoons, forks, knives, handles for knives; (item 153–6) nails for horseshoes and other animal shoes; (item 169–3d and note) electric bulbs.

Exemption from Increased Duties of Goods Already Shipped.

These decrees were published in the Journal of Laws No. 50, for May 14, 1923, and became effective four days after publication. The changes, however, were not applied for one month from the date the decrees went into effect to goods handed over for transport by rail, ship, or post, directly to the customs area of the Polish Republic, or indirectly, but directed to recipients on the customs territory of the Polish Republic not later than the day before publication of the decrees, nor to goods that were in customs, railway, or official stores on the day when the decrees came into effect.

IMPORT AND EXPORT RESTRICTIONS.

BRITISH BORNEO (SARAWAK).

Vice Consul Hugh S. Miller, Singapore.

Restriction of Rubber Export.

In keeping with the policy in effect in British Malaya and Ceylon, the Government of Sarawak has announced a restriction of exports of plantation rubber, beginning March 31, 1923.

The announcement gives notice that the quantity of plantation rubber which may be exported after the 31st day of March, 1923, by any producer should not exceed 400 pounds per acre during any period of 12 months; provided that in respect to the first 5 acres of any estate or garden, or an area of less than 25 acres, such maximum quantity may be 530 pounds.

In all cases the prescribed quantity of rubber which may be exported should be calculated over quarterly periods.

In the case of rubber gardens which have not yet been surveyed, 200 trees in bearing shall be deemed to be equivalent to an acre.

DANZIG.

Consul Charles H. Albrecht, Danzig.

Enforcement Against Danzig of Polish Import and Export Restrictions.

The Polish Government has informed the Danzig Senate that on and after April 20, 1923, goods the importation of which into Polish customs territory and the exportation of which from Polish customs territory is forbidden will be permitted to pass the Polish customs frontiers only if they are covered by export and import permits which have been issued by the competent Polish authorities. No other export or import permits will be recognized. Shipments of such goods the exportation and importation of which is forbidden will be stopped without consideration and under certain circumstances be subjected to penal procedure.

[Formerly in cases where Danzig was not in accord with the Polish prohibitions and after a failure to reach an accord notified Poland of the quantity of such goods she required for her own needs provision was made for the shipment of prohibited goods to Danzig to the extent of the needs of her population, industries, agriculture, and trade. Permits in such cases were issued in the past by the Foreign Trade Bureau in Danzig, but in the future permits will not be recognized unless they have been issued by the Head Office for Import and Export in Warsaw.]

FRANCE.

Journal Officiel, Paris, May 30.

Reestablishment of Export Restriction on Walnut.

The decree of March 11, 1922, permitting the exportation without restriction from France of walnut, rough, squared, or sawed, has been repealed by a decree of May 29, 1923. Until further notice the exportation of these products is subject to license.

Vice Consul Charles F. Pennington, Marseille.

Export Restriction on Oil-Cake.

By an agreement concluded March 8, 1923, between the Union of French Vegetable Oil Manufacturers and the Minister of Agriculture, manufacturers or dealers may not export linseed or peanut oil cake unless they agree to furnish the various grades of these products to French agriculture at a price 15 per cent below the minimum quotation on the London and Scandinavian markets. Exporters of oil cake made from copra and palm nuts must account beforehand for the sale to French agriculture of four times the amount for which export permission is sought and accept the same price obligations required for other oil cake.

By another provision of the agreement the Union of French Oil Manufacturers guarantees the maintenance of a stock in France of 30,000 tons of oil cake from April to October, inclusive, and of 20,000 tons during other months. The Union, after taking account of the stocks on hand, the condition of the market, and the farmers' needs, will indicate monthly to the Minister of Agriculture the amount of oil cake available for exportation.

Journal Officiel, Paris, April 21.

Export Restriction on Textile Rags and Wastes.

According to an official notice, effective May 1, 1923, the exportation from France of rags or wastes of the following products may be effected only under license: Cordage of manila hemp, aloe and sisal hemp; phorium (gonis), jute "clair" and "demiclair"; wipings (cotton for machine); old white cotton, "clair" and "demiclair"; new calico or cotton, bleached or unbleached; and cloths 1, 2, 3, 4, and 5. The exportation of other kinds of rags is free from restriction.

E. A. Masuret, Secretary to Trade Commissioner, Paris, May 24.

Removal of Export Restriction on Straw and Fodder.

Until further notice, straw and fodder may be exported from France without license, according to an official notice published in the Journal Officiel for May 23. These articles have been under restriction since December 3, 1922.

Consul W. W. Corcoran, Boulogne-sur-Mer, May 8.

Warning as to Restrictions on Borax-Cured Meats.

In view of the report that many shipments of American cured meats are being denied entry into France because of the heavy use of borax in the curing process, it is deemed advisable to call attention to the French law of August 1, 1905, which declares as fraud the use of borax in curing meats and prohibits the importation of meats so cured.

It is understood that these regulations have not been strictly construed until recently, but are now being quite generally enforced in most French ports of entry.

PHILIPPINE ISLANDS.

Legislative Bulletin No. 3101.

Regulations for Imports of Viruses, Serums, and Toxins.

An act of the Philippine Legislature, effective from March 16, 1923, prohibits the importation into (or traffic in) the Philippine Islands of products for the treatment of domestic animals, such as viruses, serums, and toxins, that are inefficacious, dangerous, or of quality inferior to that indicated on the label.

The Director of Agriculture is authorized to issue licenses for the importation of viruses, serums, and toxins which do not violate the above provisions and on condition that the licensee shall permit the inspection of their products and the process of preparation.

Violations of the provisions of the act shall be punishable by fine and imprisonment.

POLAND.

Cablegram from office of Commercial Attaché, Warsaw, June 11.

Relaxation of Export Prohibition on Lumber.

The exportation of crude lumber from Poland has been resumed under a license system.

[See COMMERCE REPORTS for June 11, 1923, for former export prohibition on crude lumber.]

RUSSIA.

Minister F. W. B. Coleman, Riga, Latvia.

Export Restriction on Sheep Wool.

The Soviet of Labor and Defense has resolved to extend to all republics forming part of the Soyuz of Socialist Soviet Republics the resolution prohibiting the exportation of all sorts of coarse sheep and Merino wool which could be worked up in factories in the territory of the Russian Socialist Federal Soviet Republic, according to the Moscow Izvestia, No. 48, March 3, 1923.

TARIFF CHANGES ON SPECIFIC ARTICLES.

BRAZIL.

Commercial Attaché W. L. Schurz, Rio de Janeiro, May 1.

Change in Import Duty of Metal Tanks and Drums.

On April 16, 1923, the local Inspector of Customs issued a regulation changing the Brazilian import duty on metal tanks and drums used as containers for gasoline and other liquids from the nominal duty of 20 per cent ad valorem (actual duty 73.36 per cent ad valorem) to the nominal duty of 0.100 milreis per kilo (actual duty 0.343 milreis per kilo).

[The actual duty includes the increase due to the inclusion of the 2 per cent gold tax and the conversion of the gold portion of the duty (60 per cent) into paper.]

Exemption from Import Duty of Single Sacks Containing Flour.

The Brazilian Minister of Finance has recently ruled that single sacks containing wheat flour be exempt from import duty, thereby revoking his order of April 17, 1923, requiring that an import duty be assessed on sacks, whether double or single, containing flour.

CANADA.

Vice Consul Gilson G. Blake, jr., Ottawa, June 6, 1923.

Temporary Restoration of Former Duty on Raisins.

The House of Commons Debates of June 5 report that Canadian Minister of Finance Fielding has amended his earlier resolution providing for an increase in the duty on raisins by proposing that the former duty of $\frac{3}{8}$ cent per pound under the general and intermediate tariffs ($\frac{1}{2}$ cent under the preferential) shall stand until such time as Canada and Australia shall have entered into a reciprocal trade agreement, when the new proposed rates of 3 cents per pound under the general and intermediate tariffs (free under the preferential) shall be made effective by proclamation of the Governor-in-Council.

[By a recent decision of the Canadian Commissioner of Customs and Excise cartons containing raisins are dutiable separately at the rate of 35 per cent ad valorem. The sales tax is also assessed on both the raisins and the cartons. This amounts

to 6 per cent of the duty-paid value of the goods when imported by retailers and consumers, and 3¾ per cent when imported by manufacturers, wholesalers or jobbers. See COMMERCE REPORTS for May 28 and June 11 announcing budget proposals for modifications in duties and taxes. The latest proposal provides for the application of a uniform sales tax of 6 per cent, effective from January 1, 1924, on sales of domestic as well as imported goods.]

CHINA.

Frank R. Rhea, Registrar, China Trade Act, Pekin, May 10.

Reimposition of Export Duty on Hair Nets.

An export duty on hair nets of 0.10 tael per gross has been imposed, beginning May 1, 1923, according to information received from the Commissioner of Customs of China.

[Formerly there was an export duty on hair nets of 5 per cent ad valorem, but this was remitted several years ago.]

EGYPT.

Journal Officiel, Cairo, April 26.

Reduction of Import Duty on Denatured Alcohol.

The specific import duty on alcohol which has been denatured in the manner prescribed by the customs authorities of Egypt has been reduced from 3 milliemes to 2 milliemes per kilo, according to Decree No. 9, dated April 23, effective May 1, 1923.

[The duty levied on all other kinds of alcohol was published in COMMERCE REPORTS for October 16, 1922. One Egyptian pound equals 1,000 milliemes; par value of pound equals $4.943.]

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, June 15.

Reduced Italian Import Duties on Meats.

The Italian import duties have been reduced on certain meats and fish, in effect from June 12. These reductions in duty have been made in order to reduce the cost of living. The duties are stated in gold lire and paid in paper at a rate fixed weekly to approximate current exchange. The following table shows both former and present duties on the commodities affected by this decree:

Item No.	Article.	Former duty (lire, gold).	New duty (lire, gold).
		Per 100 kilos, legal weight.	*Per 100 kilos, legal weight.*
ex19	(A) Fresh beef	18.00	5.00
ex34	(B) 2. Tuna fish in tins, weighing up to 20 kilos, including receptacle	37.50	20.00
	3. (*a*) Tuna fish in other receptacles	45.00	15.00
ex19	(*b*) Frozen beef	16.00	Free.
ex20	2. Meats, salted, smoked, or otherwise prepared	50.00	Free.
ex34	(*a*) 2. Dried, salted, or smoked codfish and herring	5.00	Free.
	(*b*) Canned salmon	42.00	Free.
129	Lard	15.00	Free.
130	Bacon	25.00	Free.

MEXICO.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City.

Increased Import Duty on Cotton and Linen Handkerchiefs.

Cotton and linen handkerchiefs, not specified, without hemstitching or borders, will hereafter be classified under items 347–A and 400–A, respectively, with duties corresponding to the material of which composed. Cotton and linen handkerchiefs with hemstitching or borders (not embroidered) is now classified under items 347–B and 400–B, respectively, and dutiable according to component material, plus an additional charge of 25 per cent.

[Handkerchiefs of the above materials, not specified, were formerly classified and dutiable under the items corresponding to the component material.]

SALVADOR.

Consul Lynn W. Franklin, San Salvador, May 15.

Reimposition of Export Duty on Sugar.

An export duty of 5 per cent is to be levied on each quintal of 46 kilos (101.4 pounds) of sugar when the value declared in the maritime insurance amounts to $4 or more per quintal of sugar. The decree becomes effective 90 days from the date of publication in the Diario Oficial on May 14. Sugar has been exportable from Salvador free of duty since July, 1921.

CUSTOMS REGULATIONS.

HAITI.

Correction of Consular Invoices to Avoid Customs Fines.

In order to relieve importers of the liability to customs penalties when unintentional irregularities appear in the documents accompanying shipments of merchandise to Haiti, the General Receiver of Customs has recently issued an order that, by giving proper notice at the time of presentation of the customs declaration, all clerical errors, omissions, or differences between the consular invoice and the commercial invoice may be adjusted by the addition of a "post-entry" or "observation" describing the errors or differences. By compliance with the procedure laid out for the presentation of such "observations" in Circular No. 287, importers can now obtain a waiver of the prescribed penalties for clerical errors or irregularities in the documents accompanying shipments to Haiti.

[A copy of the official order, issued at Port au Prince by the General Receiver of Customs for Haiti, has been transmitted to the Division of Foreign Tariffs by the Bureau of Insular Affairs, and details regarding the procedure for taking advantage of this privilege will be furnished upon request.]

INTERNAL REGULATIONS AFFECTING TRADE.

GERMANY.

Consul General William Coffin, Berlin.

Control of Match Supplies Abolished.

A decree dated March 14, 1923, abolished the regulations of July 19, 1921, governing the organization of Germany's supply of matches.

[By these regulations the supplying of matches, both domestic and imported, had been intrusted to the "Zuendholzindustrie Gesellschaft m. b. H." at Berlin. This body acted under instructions from a board of trustees, composed of representatives of the Government, consumers, manufacturers, importers, retailers, and wholesalers, in establishing general rules for the supplying of matches, in the distribution of revenue derived from an assessment upon the German match manufacturers, and in determining the quantity to be imported.]

PHILIPPINE ISLANDS.

Legislative Bulletin No. 3067.

Registration of Fertilizers Required.

A recent act of the Philippine Legislature (approved March 16, 1923, and retroactive to January 1, 1923) requires the registration of all brands of commercial fertilizers and the filing of a statement of contents and sources of the imports. The registration fee is 50 pesos ($25). Heavy penalties are provided for violations of act.

[A copy of this act is on file in the Division of Foreign Tariffs, and detailed information will be furnished to interested American firms on application.]

POLAND.

Consul General L. J. Keena, Warsaw.

Increase in Excise Tax on Matches.

The excise tax on matches in Poland has been increased from 6 to 80 Polish marks per box of not more than 60 matches. The tax is collected by requiring Government paper bands to be pasted on the boxes.

[See COMMERCE REPORTS for April 2, 1923, for increase of match tax from 2 to 6 Polish marks per box.]

SIAM.

Minister Edward E. Brodie, Bangkok, April 5.

Harmful Habit-Forming Drugs Laws and Regulations.

Translations of the Harmful Habit-Forming Drugs Law, B. E. 2465, of Siam and the Ministerial Regulations issued thereunder have been forwarded to the Bureau of Foreign and Domestic Commerce by the American Minister at Bangkok. Information on specific points regarding the provisions of this law and regulations will be furnished upon request.

SIBERIA.

Consul S. Pinkney Tuck, Vladivostok, April 24.

New Excise Taxes, Payable Under Penalty of Confiscation.

An announcement made on April 15, 1923, by the Peoples Commissary of Finances provides for excise taxes on a list of articles including tea, tobacco products, sugar, naphtha, benzine, etc. The excise on these products is so high as to amount to the present market value of the goods, and the period given for payment by local firms (both wholesalers and retailers) is exactly four days. If at the end of that time all stocks on hand have not been fully declared to the administration responsible for this order and all excise taxes thereon paid, the goods become subject to immediate confiscation without possibility of redress on the part of the owners.

FOREIGN MAILS AND PARCEL POST.

GUATEMALA.

Consul Arthur C. Frost, Guatemala City.

Shipments by Parcel Post, "In Transit" Shipments, and Travelers' Samples.

In view of the fact that some misunderstanding exists concerning the regulations for shipments to Guatemala by parcel post, "in transit," and of travelers' samples, the following information may help to make the matter clearer:

Consular invoices are not necessary for shipments of commercial travelers' samples, nor for "in transit" or parcel-post shipments. All merchandise, however, destined for transit through Guatemala must be covered by the proper manifest, which should be presented in triplicate at the customhouse of entry. In shipments by parcel post it may facilitate matters to have a commercial invoice, though it is not required.

Additional information regarding tariffs and trade regulations appears in this issue under the following sections:

Cable review, Far East: Abolition of Australian tariff on unworked steel plates.
Cable review, eastern Europe: Rumanian commercial agreement with Spain.
Transportation—shipping: Packing for lowest duties in France.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

CHINA'S FOREIGN TRADE IN 1922.

Trade Commissioner Lansing W. Hoyt, Shanghai.

The official import and export figures of China for the calendar year 1922 show an increase in imports of 39,278,000 haikwan taels and in exports of 53,645,000 haikwan taels over 1921. Total figures and the share of the various countries are shown in the following tables:

China's foreign trade in 1921 and 1922.

Countries of origin and destination.	1921	1922	Countries of origin and destination.	1921	1922
IMPORTS.	*Haikwan taels.*	*Haikwan taels.*	EXPORTS.	*Haikwan taels.*	*Haikwan taels.*
Hongkong	231,138,000	239,300,000	Hongkong	152,875,000	170,000,000
Japan	210,359,000	231,400,000	Japan	172,111,000	159,800,000
United States.	175,790,000	169,000,000	United States.	89,542,000	97,600,000
Great Britain.	149,936,000	145,300,000	France	23,945,000	40,800,000
India	35,380,000	43,100,000	Great Britain.	30,914,000	38,500,000
Germany	13,349,000	24,700,000	Russia and Siberia	22,865,000	39,200,000
Other countries	90,170,000	92,600,000	Other countries	109,003,000	109,000,000
Total	906,122,000	945,400,000	Total	601,255,000	654,900,000

NOTE.—The average value of the haikwan tael was $0.7605 in 1921 and $0.8197 in 1922.

These figures indicate that all countries with the exception of the United States and Great Britain supplied a greater share of China's imports during 1922 than in 1921. The United States and Great Britain, however, showed losses of 6,790,000 and 4,600,000 haikwan taels, respectively.

The apparent falling off in China's takings of American products is largely explained by the fact that an increasing amount of our goods is reaching China through the port of Hongkong and Japan ports, and a very considerable quantity of American products are shipped via Canada. Goods received in China through these channels are credited in the customs returns to Hongkong, Japan, and Canada, and not to the country of origin.

Far Eastern Trade and Economic Notes.

Japanese Customs Collections Show Decline.

The customs revenue of Japan during March amounted to 9,799,350 yen, or 2,645,424 yen less than March of last year (1 yen=$0.4985). Collections for the 12 months ended March 31, however, showed an increase of 124,510 yen, as compared with the previous 12 months.

Chinese Postal Savings System Records Growth.

The growth of the Chinese postal savings system, which was installed in 1919, is shown by the report

issued for the first six months of 1922. At the end of that period there were deposits of over $3,000,000, made by 22,498 depositors in 334 savings departments. The largest deposits were received in Peking and the smallest in Mukden. Investments made under the system totaled $1,222,592 on the dollar account and $575,671 on small-money accounts, such as the Canton dime. (Chinese Government Bureau of Economic Information, May 12.)

Additional information regarding the Far East appears in this issue under the following section:

Transportation—communications: Radio service, Holland to Dutch East Indies.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

BRAZILIAN AGRICULTURE AND FOREIGN TRADE.

Agriculture is the chief industry in Brazil and the one from which the bulk of its exports is derived. With the vast area and primitive methods of cultivation in Brazil, a tendency for large farms is shown. They vary in size from 250 hectares (1 hectare=2.47 acres) to 15 or 20 kilometers and even larger. The amount of land under cultivation is increasing, and indications point to Brazil becoming one of the leading agricultural centers of the world.

The total area of Brazil is estimated at 8,511,189 square kilometers (1 square kilometer=0.3861 square mile), according to a report recently issued by the Brazilian Department of Agriculture. About 20.5 per cent, or 175,104,657 hectares, of this area is under cultivation. The value of improved land is given as 10,568,008,000 milreis and the number of rural establishments occupying it as 648,153. (The normal value of a paper milreis is $0.32, while the average value for 1922 was about $0.13.)

The State of Minas Geraes possesses the largest agricultural area, with 27,390,536 hectares. Rio de Janeiro has the greatest proportion of its area under cultivation—72 per cent. Sao Paulo leads in the amount of capital invested in the development of agriculture, with 2,887,244,000 milreis, which is 27 per cent of the total value of agricultural properties in Brazil, while Rio Grande do Sul has the largest number of agricultural establishments—124,990. The total value of the properties (10,568,008,000 milreis) is made up as follows: Value of land, 8,325,275,000 milreis, or 78.8 per cent of the total; value of land improvements, 1,918,187,000 milreis, or 18.1 per cent; value of agricultural machinery and other implements, 324,546,000 milreis, or 3.1 per cent. The area under cultivation, according to zones of production, is as follows:

Area devoted to various products.

Products.	Area.		Number of establishments.
	Hectares.	Per cent of total.	
Coffee and mining	45,657,927	26.0	243,304
Cattle and cereal	71,887,492	41.1	209,803
Sugar, cacao, cotton	33,075,521	18.9	155,349
Rubber and nuts	24,483,735	14.0	39,697

The zones of production are located in the following States: Coffee and mining, Espirito Santo, Rio de Janeiro, Sao Paulo, and Minas Geraes; cattle and cereal, Rio Grande do Sul, Santa Catharina, Parana, Matto Grosso, and Goyaz; sugar, cacao, and cotton, Alagoas, Bahia, Ceara, Parahyba, Pernambuco, Piauhy, Rio Grande do Norte, and Sergipe; rubber and nuts, Amazonas, Para, Maranhao, and Acre.

In spite of the fact that the coffee and mining zone produces over 60 per cent of Brazil's exports, this zone represents only 26 per cent of the total producing area of the country. The cattle and cereal zone represents 41 per cent of the total area; the sugar, cacao, cotton, and vegetable oil zone, 18 per cent; and the rubber and nut zone, 14 per cent.

Brazil's Foreign Trade by States.

Exports and imports for 1922 by States were as follows:

Brazilian exports and imports.

State.	Exports.		Imports.	
	Milreis.	Value in United States currency.	Milreis.	Value in United States currency.
Sao Paulo	1,150,575,000	$148,654,290	471,142,000	$60,869,220
Rio de Janeiro	429,191,000	55,451,477	779,358,000	100,693,053
Bahia	174,722,000	20,474,082	64,378,000	8,315,637
Rio Grande do Sul	104,528,000	13,505,017	97,460,000	12,592,832
Pernambuco	103,256,000	13,340,675	99,449,000	12,848,810
Espirito Santo	65,187,000	7,522,160	3,762,000	486,050
Amazonas	53,496,000	6,911,683	8,130,000	1,050,306
Parana	51,527,000	6,657,288	13,435,000	1,735,802
Para	48,858,000	6,312,453	22,872,000	2,955,062
Ceara	42,157,000	5,446,864	35,935,000	4,642,812
Maranhao	37,419,000	4,834,534	6,325,000	817,190
Alagoas	24,016,000	3,099,867	13,628,000	1,760,737
Santa Catharina	17,283,000	2,232,963	8,350,000	1,078,820
Parahyba	16,732,000	2,161,774	13,815,000	1,784,908
Rio Grade do Norte	8,383,000	1,083,083	9,652,000	1,247,042
Matton Grosso	4,754,000	614,217	3,243,000	418,905

In considering the export figures in the preceding table it must be borne in mind that the exports of the important State of Minas Geraes are sent out through the ports of Rio de Janeiro, Santos, Bahia, and Victoria, and are thus included in the totals for the respective States. The small exports of Goyaz go out through Santos, and those of Piauhy through the Ilha do Cajueiro in Maranhao.

Products of Various States.

The principal products of the various States are as follows: Sao Paulo, coffee, cotton, rice, and frozen meat; Alagoas, sugar; Rio de Janeiro, sugar and dairy products for domestic consumption; Bahia, cacao, tobacco, hides and skins, and precious stones; Rio Grande do Sul, hides and skins, rice, meat, and coal; Pernambuco, sugar and cotton; Espirito Santo, coffee and cabinet woods; Amazonas, rubber and oil nuts; Parana, yerba maté and lumber; Para, rubber and oil nuts; Ceara, cotton, hides, and skins; Maranhao, oil nuts, hides and skins, and cotton; Santa Catharina, agricultural and dairy products and coal; Parahyba, hides,

skins, and cotton; Rio Grande do Norte, hides, skins, and cotton; Matto Grosso, cattle; and Minas Geraes, coffee, cattle, manganese, and iron.

Mexican Economic Notes.

Acapulco Merchants Overstocked.

Merchants in the Pacific coast region of Mexico adjacent to Acapulco say that sales are exceedingly slow (not over 25 per cent of what had been anticipated during May) and consequently most of them are overstocked with imported merchandise ordered in anticipation of the good harvest prospects. Collections for the month realized less than usual, as debtors claimed they could not get the money to pay. Exports practically ceased and farmers have no surplus for trade, as they are producing just sufficient for their own needs and so far there seems little inclination to increase plantings during the coming season.

Money is scarce with almost none available, even at interest rates of 18 to 24 per cent a year. No new capital is coming in and financial operations are about suspended awaiting improved conditions. (Consul Geo. A. Bucklin, Acapulco, May 24.)

No Industrial Improvement in San Luis Potosi.

In the San Luis Potosi consular district of the north central region of Mexico the month of May was a continuation of the long period of business depression without signs of improvement in the near future. The San Luis Potosi smelter and its near-by mines remained idle, although the smelter at Matehuala and the mines there and at Charcas operated with about normal production. A limited amount of water is now available for irrigation of the fields around the city, as unexpected rains nearly filled the local reservoir. Exchange rates were unfavorable, and during the month there were a number of labor difficulties in the city. (Consul Walter F. Boyle, San Luis Potosi, June 1.)

Chilean Nitrate Production in 1922 and 1923.

Vice Consul B. C. Matthews, Antofagasta, May 15.

The local branch of the Association of Nitrate Producers of Chile has given out the following figures showing plants in operation and production during the current nitrate year to and including April compared with figures for similar periods of 1922:

	Metric tons.
Production reported by 62 mines, April, 1923	143,764
Production reported by 31 mines, April, 1922	72,109
Increase for April, 1923	71,655
Production from January to April, 1923	549,085
Production from January to April, 1922	278,784
Increase for period January to April, 1923	271,301
Production for the nitrate year July to April, 1922–23	1,194,232
Production for the nitrate year July to April, 1921–22	743,098
Increase for nitrate year 1922–23	451,134

Nitrate shipments fell off during May because of the uncertainty as to prices, though important shipments are looked for in June and July. As announced in the last monthly cable from Valparaiso (published in COMMERCE REPORTS of June 4), the new schedule of nitrate prices is approximately the same as that which it supersedes.

WESTERN EUROPE

Alan G. Goldsmith, Chief, Western European Division

TRADE WITHIN THE BRITISH EMPIRE.

Commercial Attaché Walter S. Tower, London, May 25.

The idea of fostering trade within the British Empire is discussed with increasing frequency. The plans for a British Empire Exposition in 1924 marked one of the most important steps in that direction. Then came the decision to hold an Imperial Economic Conference next October. At present, trade delegations from overseas dominions are visiting Great Britain to promote interimperial trade; the vanguard of delegates to the economic conference has begun to arrive, to study the ground thoroughly from this end; and a "British Empire shopping week" has been staged in London for the purpose of featuring in all classes of shops the products of British industry, both domestic and overseas. Certainly at no time since the days of Joseph Chamberlain has the idea of trade within the Empire gained such currency as it now enjoys, for it is found among all classes of business interests, among public officials, and in the provinces quite as definitely as in the metropolis.

Reasons Contributing to Popularity of Idea.

Behind this popularity lie various reasons, according to the angle from which the subject is approached. Chief among them is the effect of European conditions on the markets for British goods. At home the manufacturer sees former profitable markets on the Continent still unsatisfactory, after more than four years' tiresome waiting for recovery, and he readily yields to the suggestion that trade within the Empire offers the best solution for his difficulties. This inclination is aided materially by the growing conviction that full commercial restoration of Europe is going to be a much longer and more difficult process than was at first realized. Overseas, the producers of foodstuffs and of raw materials find it less easy to export profitably all the surplus which could be produced, latent resources remain untouched, and it is easy to conclude that the remedy for these conditions lies in a closer knit Empire, economically and commercially.

In a way this line of reasoning amounts to a belief that the various parts of the British Empire are together rich enough to be self-contained and self-supporting, if the idea of economic unity can be realized.

Among other reasons which are commonly advanced, there is the idea of "safety and integrity of the Empire"; safety, as regards supplies of necessary materials in the event of another conflict; integrity, as regards a bond stronger than mere kinship and intangible political ties to hold the Empire against progressive dissolution following divergence of economic interests. There is also the idea of meeting by means of an imperial commercial policy, probably expressed in tariff agreements, the attitude of other nations in taxing imports of British goods. In this connection the United States is invariably mentioned. Finally there is the sentiment heard from colonial quarters that their products should enjoy greater advantages over foreign (non-Empire) goods in the markets of Great Britain in return for the very substantial consideration given to the products of Great Britain when entering the colonial markets.

Campaign in Favor of General Tariff Preference.

The ground evidently is being prepared, well in advance and most carefully, for a thoroughgoing campaign in favor of general tariff preference for the whole Empire, when the economic conference convenes in October, for the advocates of that policy find in it the only means of accomplishing "economic unity, safety, integrity, and the trade within the Empire," which are so strongly desired. To-day, more than ever before, it is argued, the Government of Great Britain is favorably disposed, and conditions of the outside world are such that if the scheme can not be realized this time it never can. That undoubtedly is the truest part of the case for imperial preference, as it is presented by its warmest advocates.

In general, those advocates lose sight of the fact that, rich as the colonies may be, the sixteen to eighteen millions of white population in the overseas parts of the Empire make a poor offset market for British goods to compensate for the 350,000,000 on the Continent, whose buying power is impaired. They lose sight of the fact that Great Britain can not go very far in reciprocating tariff preferences on most colonial wares without imposing duties on essential foodstuffs and raw materials, a policy which would lessen its freedom of buying in the cheapest and most convenient market, thus weakening one of the chief advantages on which the industry and trade of Great Britain have been built. They fail to realize that although the Empire may produce within its limits enough food products and enough raw materials to meet the needs of the home country, it does not always follow that any sort of wheat will satisfy every miller's demand, nor that all wool is alike to the spinners in Yorkshire. They overlook the fact of commercial ambitions in some of the Dominions, which are not wholly compatible with a policy of more general tariff preferences. And they fail to read correctly the signs which suggest that Canada and British India are far less keen on the subject than are Australia and South Africa. But these and many other pertinent facts in the case must develop, if the subject of imperial tariff preference gets the sort of airing which seems to be in store for it.

Some skillful plan may be advanced by which a greater degree of "economic unity" is attainable for the Empire. If so, it should benefit both home country and colonies, as well as work indirectly to the advantages of other countries, since added prosperity for the Empire must be felt beyond its limits. However, the chances seem to be all against economic unity or trade within the Empire being attained through materially larger degrees of imperial preference.

American Commercial Attaché in London Occupies New Quarters.

The London office of the Bureau of Foreign and Domestic Commerce has secured quarters in Bush House, the new American skyscraper which is being erected in the heart of the London business district and which will be ready for occupancy this summer. This building is located in the Aldwych, which is a small crescent shaped street at the junction of several of the great business thoroughfares, including Kingsway, Fleet Street, and the Strand. The structure rises to a height of 144 feet and contains eight stories. While this is not a tall building according to American standards, it represents a new departure in British architecture and was only permitted by the London municipal authorities because every effort was made to harmonize the building with its surroundings. The branch office of many well-known American firms are already located in this district and several American firms have leased offices in the new building. Business men from this country who are visiting London should not fail to call at this outpost of American commerce and industry.

The Lyon Sample Fair.

Consul Hugh M. Watson, Lyon, May 8.

The administrators of the Lyon Fair have announced that visitors at the spring exhibition, held from March 5 to 17, totaled 400,000, of whom 160,000 were classed as actual buyers. In 1922 the percentage of foreign buyers was only 3, whereas in 1923 it rose to 13. The visitors came from 32 different countries, principally Switzerland, Belgium, and Italy. The United States ranked eighth on the list.

Statistics of business transacted are somewhat uncertain because of the impossibility of obtaining complete figures. Estimates based on 235 declarations give an average of business concluded of 178,346 francs per exhibitor, compared with 105,172 francs in 1922. Transactions initiated but not concluded amounted to an average of 81,420 francs compared with 43,157 francs in 1922.

Tariffs and trade regulations: Italy—patents and industrial improvement exhibition at Turin.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

Exportation of Foreign Currency and Valuables from Soviet Russia.

Abstracted from Izvestiya, Moscow, April 23, 1923.

The following modifications of the previous decrees governing exportation of foreign currency and valuables and the transferring of funds abroad have been recently promulgated by decrees of the All-Russian Central Executive Committee and the Council of People's Commissars:

Persons going abroad may take with them foreign currency, drafts, notes, and checks issued in foreign currency, precious metals in bullion and articles, and jewelry of a total value not exceeding 200 gold rubles per person, with an additional 100 gold rubles' equivalent for each member of a family traveling on the passport of the head of the family. Nationals of those foreign countries with which special conventions are in effect are subject in this respect to existing provisions of such treaties or conventions.

Exportation of valuable as above specified, in violation of these regulations, is punishable in accordance with article 97 of the Criminal Code of Soviet Russia, the objects of illegal exportation being subject to confiscation by the customs authorities as contraband. In cases of confiscation of nonrealizable values (checks, drafts, letters of credit, etc.) those found guilty are to be fined in amount equal to the value of the confiscated objects at the official rate of exchange.

Unemployment in Poland.

Consul General L. J. Keena, Warsaw, April 26.

As a result of industrial expansion, unemployment in Poland during 1922 showed a large decrease. From 218,368 in January, 1922, the number of unemployed had diminished to 61,178 in November, and at the end of the year stood at 75,262.

At the end of the first quarter of 1923 the figure had climbed to 117,343, chiefly because of seasonal unemployment and, during February and March, of decreased industrial activity.

New Polish Law on American Passport Visés.

H. B. Smith, Acting Commercial Attaché, Warsaw, April 25.

The validity of all classes of Polish visés on passports of American citizens has been extended from three months to one year, according to a decree of the Polish Government of March 24, 1923. In cases where the visé has lapsed, a nominal charge is made for the exit visé. A single fee of $10 is charged for visés of passports of American citizens, including therein wife and children under 14 years of age; but the fee for transit visés is $1.

BALKANS AND LEVANT.

The Zagreb Fair.

Consul J. F. McGurk, Zagreb, Yugoslavia, May 15.

The second annual Zagreb Fair closed on May 1, after a successful run of 10 days. The largest sales were made by exhibitors of agricultural machinery, mill equipment, and tools, followed by textiles, chemicals, leather, and lumber. Noteworthy exhibits of local or national industries were made in furniture, manufactures of paper, glass and glassware, textiles, soap, perfumes, leather, and wines and liquors. At this fair Yugoslavia had 471 exhibits, France 62, Austria 46, Czechoslovakia 34, Germany 22, America, Great Britain, Italy, Sweden, and Switzerland each 2, and Hungary and Rumania each 1.

It is reported that many orders have been taken for all classes of agricultural implements and machinery. A representative of an American company stated that he sold the only three machines he had in stock on the first day of the fair, but could have sold 10 times that number with the machines in stock; also that there was a decided preference for American machines among inquirers. American automobiles were also popular.

Compared with the fair of last year, the sales were reported to be practically the same in terms of local currency, but considerably less when reduced to United States currency, the figures being $4,100,000 for 1922 and $3,160,000 for 1923.

Increase in Principal Exports from Rumania.

Consul Ely E. Palmer, Bucharest, Rumania, May 12, 1923.

The principal exports of Rumania during the first quarter of 1923 show considerable improvement over the corresponding quarter of 1922. The only exceptions are petroleum products, which show a slight decrease, and hogs, the exportation of which at the present time is prohibited. Cereal products (wheat, wheat flour, rye, barley, oats, corn, millet, bran, and beans) were exported to the amount of 351,662 metric tons, as against 138,815 metric tons during the 1922 quarter. Exports of petroleum products (crude oil, fuel oil, refined oil, gasoline, paraffin, and lubricants) amounted to about 73,000 tons, as against 93,000 tons during the corresponding period of 1922. Exports of lumber and logs show an increase of over 100 per cent; of cattle, about 10 per cent; and of salt, about 50 per cent.

German Merchandise Entering Persia.

Consul Bernard Gotlieb, Teheran, Persia, March 24, 1923.

Large quantities of German goods—almost without exception the cheapest and most unsubstantial of miscellaneous articles, such as electric flash lights, razors, pens, pencils, stationery supplies, haberdashery, etc.—have invaded the Teheran bazaars. Practically all of these materials have arrived via Bushire. Commercial representatives in Teheran are doing business on the basis of 50 per cent cash advance against order, balance on delivery. No credit is extended to Persian importers.

Additional information regarding eastern Europe and the Levant appears in this issue under the following sections:

Transportation—railways: Freight thefts on Russian railroads.
Tariffs and trade regulations:

Poland—general tariffs increase.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

The following figures, representing industrial and commercial movements during May, have been received by the Department of Commerce:

Wool, Cotton, and Cotton Goods.

Receipts of wool at Boston in May amounted to 53,383,000 pounds, as compared with 53,586,000 pounds in April and 40,972,000 pounds in May a year ago. Consumption of cotton by textile mills aggregated 620,965 bales, which may be compared with 577,396 bales in April and 495,337 bales in May, 1922. The total consumption for the 10 months ending May 31 amounted to 5,660,969 bales, as compared with 4,942,600 bales for the same period ending May 31, 1922. Total stocks of cotton amounted to 3,200,896 bales on May 31, being about evenly distributed between the mills and warehouses, and compares with a total of 3,979,879 bales at the end of May last year, when 2,559,451 bales of the total were held at warehouses.

Production of fine cotton goods amounted to 491,660 pieces in May, as compared with 423,201 pieces in April and 378,974 pieces in May a year ago. Sales of fine cotton goods during the month amounted to 180,914 pieces, as against 347,368 pieces in May, 1922. Cotton cloth exports in April amounted to 44,741,000 square yards as against 51,615,000 square yards in April, 1922.

Silk Consumption—Pig Iron and Zinc Production.

Consumption of silk in May amounted to 24,509 bales, as compared with 33,284 bales in May a year ago. Silk stocks on May 31 aggregated 29,962 bales, as against 20,826 at the end of May, 1922. The price of raw silk at New York declined during the month, and at $8.43 per pound the May average compares with $7.20 for May, 1922.

Pig-iron production in May amounted to 3,868,000 tons, as against 2,307,000 tons in May a year ago. Production of merchant pig iron totaled 600,000 tons, as against 250,000 tons in May, 1922. Steel-ingot production, allowing for companies not reporting, amounted to 4,205,000 tons, as compared with 3,948,000 tons in April and 3,223,000 tons in May of last year.

Zinc production amounted to 94,694,000 pounds, compared with 93,732,000 pounds in April, while zinc stocks at the end of May aggregated 26,038,000 pounds, compared with 17,952,000 pounds at the end of April and 80,818,000 pounds on May 31, 1922.

Increased Coal Production—Building Material Cost Index.

Bituminous coal production in May totaled 46,035,000 tons, as against 42,564,000 tons in April. Anthracite coal production amounted to 8,573,000 tons, compared with 8,063,000 tons in April.

The index of the cost of building materials entering into the construction of a six-room brick house as compiled by the Department of Commerce stood at 214 on a 1913 basis, as compared with 209 in April and 176 in May a year ago. Production of oak flooring in May amounted to 34,636,000 feet, as compared with 21,914,000 feet in May a year ago. Cement production in May amounted to 12,910,000 barrels and shipments totaled 14,257,000 barrels for the month. The estimated total bookings for fabricated structural steel in May amounted to 145,000 tons, as against 202,500 a year ago.

Data from Survey of Current Business.

The following table gives such data from the next issue (No. 23) of the Survey of Current Business as have been received up to June 18, 1923. Some data not included in the advance statements from the preceding issue (No. 22) are also given here. Another set of advance figures will be issued giving the remaining figures for the month of May.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. In addition to figures given from Government sources there are also incorporated for completeness of service the figures from other sources generally accepted by the trades, the authority and responsibility for which are noted in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

[Footnotes are printed at end of table.]

[2] Revised.
[3] Includes F. W. Woolworth & Co., S. S. Kresge Co., McCrory, and S. H. Kress & Co.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau** and its **district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Commodity.	No.	City and country.	Purchase or agency.
Agricultural machinery	*6969	Koenigsberg, Germany	Purchase and agency.
